

Additional Information for QnM 1.1.3

Number of courses focusing on employability/entrepreneurship/skill development offered during the year 2022-23

The following table shows the number of courses focusing on employability/entrepreneurship/skill development out of total 611 courses offered during AY 22-23 across all programs.

Sr No	Category of course	Number of courses
1	Employability	129
2	Entrepreneurship	19
3	Skill development	174
Total r	number of new courses	322
Tota	I number of courses	611

Due to size constraints, only the syllabus of Biomedical Engineering is shown here. The entire program structure is available on our website www.vit.edu.in. The specific links of the programs in which the syllabus revision is carried out are as below.

Vidyalankar Institute of Technology

An Autonomous Institute affiliated to University of Mumbai

Bachelor of Technology in Biomedical Engineering

First Year Scheme & Syllabus

(As per AICTE guidelines, with effect from Academic Year 2022-23)

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated, and taken forward in a systematic manner. Therefore, autonomy for Vidyalankar Institute of Technology is not merely a transition from pre-cooked syllabi to self-designed curriculum. Autonomy curriculum of the Institute offers required academic flexibility with emphasis on industry requirements and market trends, employability and problem-solving approach which leads to improving competency level of learners with diverse strengths. In line with this, the curriculum framework designed is **Choice-Based Credit and Grading System (CBCGS)**. Number of credits for each category of courses learnt by learners, internships and projects is finalized considering the scope of study and the ability that a learner should gain through the programme. The overall credits and approach of curriculum proposed is in line with AICTE model curriculum.

The curriculum comprises courses from various categories like basic sciences, humanities and social sciences, engineering sciences, general education and branch specific courses including professional electives and open electives. The curriculum has core courses of branch of engineering positioned and sequenced to achieve sequential and integral learning of the entire breadth of the specific branch. These courses are completed by third year of the engineering programme that enables learners to prepare for higher education during their final year. Professional elective courses, that begins from third year of programme, offer flexibility and diversity to learners to choose specialization from a basket of recent developments in their field of technology. The selection of unique professional elective courses based on industrial requirements and organizing them into tracks is a salient feature of this curricula ensuring employability. Open Elective courses cover multi-disciplinary, special skill development, project management and similar knowledge that make learner capable to work in industrial environment.

For holistic development of learners, apart from technical courses, Humanities and Social Science courses develop the required soft-skills and attitude amongst learners. Our curriculum also introduces Social Service Internship and Internship with institutes abroad along with courses like Design Thinking, Wellness - Body, Mind & Spirit, Indian Traditional Knowledge System under General Education category. These general education courses aim to create balance in brain hemispheres and hence improve learners' clarity in thoughts and responses.

Additionally, curriculum provides add-on minor/honours degree that involves field/ domain study. Learner can avail this degree by completing requirement of additional 15 credits. Thus, the academic plan of VIT envisages a shift from summative to formative and competency-based learning system which will enhance learner's ability towards higher education, employability and entrepreneurship.

Chairman, Board of Studies

Department of Biomedical Engineering
Vidyalankar Institute of Technology

Course Name: Effective Communication

Course Code: HS01

Category: Humanities, Social Sciences and Management Courses

Preamble:

This course introduces learners to the basics of Effective Communication and English language usage which will equip them with the requisite skillset for higher studies and placements. It considers the important foundational aspects of communication skills and English proficiency required for the workplace. It acquaints the learners with modern communication tools and the basics of public speaking before an audience.

Pre-requisites:

Basic English usage

Course Objectives:

- To enable learners to gain understanding of the cyclic process, methods, channels, and barriers of communication.
- To facilitate learners in developing the skills of active listening, impactful public speaking, reading strategies, and effective writing.
- To create awareness of strengthening English proficiency for competitive exam preparation and the art of comprehension and summarization.
- To introduce strategies for creating effective presentations using modern ICT enabled tools.

Course Outcomes:

Learner will be able to:

- CO1: Use verbal/non-verbal cues at social and workplace situations by learning the basics of communication skills.
- CO2: Employ listening strategies to become effective listeners and powerful speakers for speaking at social, academic and business situations.
- CO3: Improved verbal aptitude to be equipped for competitive examinations and placements.
- CO4: Make effective presentations and present before an audience with confidence.
- CO5: Use reading strategies for faster comprehension, summarization and evaluation of texts.
- CO6: Develop awareness of contemporary digital tools of communication.

Course Scheme:

Contac	t Hours	Credits A	Assigned
Theory	Practical	Theory	Practical
2	2	2	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	15	20	40	075
Practical	25	-	25	050

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Fundamentals of Communication	Concept, Elements and Cycle of Communication Methods of Communication (Verbal and Nonverbal) Objectives and Channels of Communication (Formal and Informal) Barriers to Communication: Physical, Mechanical, Psychological, Semantic, Socio-cultural, Cross-cultural	10
2	Listening & Speaking	Techniques to improve Listening, Listening exercises Speech writing and delivery Different types of Speeches & Tips on Public Speaking	6
3	English Usage	Vocabulary Building (Etymology, Synonyms, Antonyms, One Word Substitutes) useful for TOEFL, GRE Grammar Proficiency Tests (Articles, Prepositions, Tenses, Punctuation) Identifying Common Errors in Writing Grammar Checkers and Sentence Correction Tools	4
4	Presentation Skills	Introduction to Presentation Skills Creating Presentations-Content Delivering Presentations before an audience Using Presentation Software-Modern Presentation Tools	4
5	Comprehension & Summarization	Comprehension & Reading Strategies Graphic Organizers (Mind Maps, Flow Charts, Tree Diagrams etc.) Summarization of technical passages within specified word limit	2
6	Communication Strategies for Virtual Age	Digital Content Creation Infographics, ICT Tools Social and Popular Media	4
		Total	30

Suggested list of Practicals:

- 1. Ice Breakers/Introduction/Aptitude Test/English Proficiency Test
- 2. Extempore Speech Practice Session
- 3. Prepared Speech
- 4. Group Presentations on current and relevant topics
- 5. Situational Dialogue Writing and Delivery
- 6. Skits/Role play on Methods of Communication and Barriers of Communication
- 7. English Usage Practice on Grammar and Vocabulary
- 8. Virtual Lab

Suggested list of Assignments:

- 1. Written Assignment on Fundamentals of Communication (Individual)
- 2. Listening Activities and Exercises (Individual)
- 3. Aptitude test on Vocabulary and Grammar (Language Lab) (Individual)
- 4. Presentation on domain related topics (Group)
- 5. Comprehension & Summarization of technical passages
- 6. Digital Content Creation using ICT Tools

Course Name: Engineering Mathematics-I

Course Code: BS02

Category: Basic Science

Preamble:

The objective of the course is to develop the basic Mathematical skills of engineering learners that are imperative for effective understanding of engineering subjects. The topics introduced will serve as basic tools for specialized studies in many fields of engineering and technology. learners impart knowledge of De-Moivre's Theorem, Hyperbolic Functions, and Logarithm of Complex Numbers. The course clarifies the concept of Partial Differentiation and its applications. The course will enable learners to learn basics of Successive Differentiation, Matrices, system of linear equations, Expansions of function and Transcendental Equations.

Pre-requisites:

Basics of Complex Numbers and Differentiation

Course Objective:

- To recall and remember basics of Complex, Successive differentiation and transcendental equations
- To apply methods to solve engineering problems.
- To solve and evaluate the problems using Complex, Successive differentiation and transcendental equations
- To analyze problems based on System of Linear Equations

Course Outcomes:

Learner will be able to:

- CO1: Illustrate the basic concepts of Complex Numbers and solve problems involving different forms and properties of Complex Numbers.
- CO2.: Apply the knowledge of complex numbers to solve problems in Hyperbolic Functions and Logarithmic function.
- CO3: Illustrate the basic principles of Partial Differentiation, Homogeneous functions, and Composite functions.
- CO4: Illustrate basic principles of Maxima and Minima and Successive Differentiation.
- CO5: Apply principles of basic operations of Matrices, Rank, and echelon form of matrices to solve simultaneous equations.
- CO6: Illustrate the concept of Transcendental Equations, linear algebraic equations, and Expansions of functions..

Course Scheme:

Contac	t Hours	Credits A	Assigned

Practical	-	-	-	-

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Complex Numbers	Statement of D'Moivre's Theorem. Expansion of sinn θ , cosn θ in terms of sines and cosines of multiples of θ and Expansion of sinn θ , cosn θ in powers of sin θ , cos θ , Powers and Roots of complex numbers.	7
2	Hyperbolic Function and Logarithm of Complex Numbers	Circular functions of complex number and Hyperbolic functions. Inverse Circular and Inverse Hyperbolic functions. Separation of real and imaginary parts of all types of Functions. Logarithmic functions, Separation of real and Imaginary parts of Logarithmic Functions.	7
3	Partial Differentiation and Applications	Partial Differentiation: Function of several variables, Partial derivatives of first and higher order. Differentiation of composite function. Euler's Theorem on Homogeneous functions with two independent variables (with proof). Deductions from Euler's Theorem. Maxima and Minima of a function of two independent variables, Jacobians of two and three variables	8
4	Successive Differentiation & Expansion of Functions	Successive differentiation: nth derivative of standard functions. Leibnitz's Theorem (without proof) and problems. Taylor's Theorem (Statement only) and Taylor's series, Maclaurin's series (Statement only).Expansion of sin(x), cos(x), tan(x), sinh(x), cosh(x), tanh(x), log(1+x)	8

Course Name: Physics for Biomedical Engineering

Course Code: BS20

Category: Basic Science

Preamble:

Most of the engineering branches are being off spring of basic sciences where physics is playing a pivotal role in concept and understanding the foundation of core engineering branches. Physics prepares students to apply physics to tackle 21st century engineering challenges, and to apply engineering to address 21st century questions in physics.

The course will develop the student awareness in semiconductor devices and quantum Physics The student will develop an informed appreciation of the paradigm shift already in evidence in technologies behind modern services and products. He will possess basic physics knowledge to pursue simulation and modelling of the semiconductor systems.

Pre-requisites:

12th Std. Physics, Basic Mathematics

Course Objective:

- Identify and understand the fundamental physical principals underlying engineering devices and processes— a prerequisite to become successful engineers.
- To provide inclusive knowledge of fundamental physical principles encouraging engineering students to venture into the research field.
- To develop scientific temperament for scientific observations, recording, and inference drawing essential for technology studies.
- To give exposure to the topics of fundamental physics in semiconductor and Laser.

Course Outcomes:

Learner will be able to:

CO1: Understand the concept of thin film technology using interference and diffraction.

CO2: Understand the band theory of solids and the carrier concentration in solids

CO3: Analyse the charge distribution and charge transport processes in semiconductors

CO4: Apply the knowledge of Fermi level in semiconductors and applications of semiconductors in electronic devices

CO5: Understand different methods to generate ultrasonic waves

CO6: Illustrate the working principle of various lasers and quantum processes

Course Scheme:

However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

. Detailed Syllabus:

Module No.	Module Name	Module Contents	No. of Hours
01	Fundamentals of Optics	Interference by division of amplitude, Interference in thin film of constant thickness due to reflected and transmitted light; Wedge shaped film; Newton's rings. Diffraction: Fraunhofer diffraction at single slit, Diffraction Grating, resolving power of a grating; Determination of wavelength of light using plane transmission grating	5
02	Semiconductor Physics	Band theory of solids, Classification of semiconductors. Fermi-Dirac statistics, carrier concentration in semiconductors. Concept of Fermi energy level, its position and variation with temperature and impurity concentration.	5
03	Semiconductor Conductivity	Intrinsic carrier density, mobility, and conductivity. Carrier diffusion, drift, and resistance. Electrical conduction in extrinsic semiconductor. Diffusion length and mean lifetime. Hall Effect.	5
04	Semiconductor Devices	Physics of p-n junctions. Fermi level - in equilibrium, in forward and in reverse bias. Band bending in forward and reverse bias junction Introduction to two terminal devices – Rectifier diode, LED, Zener diode, PIN diode, Solar Cell, Schottky diode etc.	5
05	Physics of Sound	Ultrasonic Wave generation; Magnetostriction Oscillator; Piezoelectric Oscillator. Applications of ultrasonic: Eco sounding; NDT; ultrasonic cleaning(cavitation); ultrasonic	4

Module No.	Module Name	Module Contents	No. of Hours	
		sensors; Industrial applications of ultrasonic (soldering,		
		welding, cutting, drilling)		
	Lasers	Radiation Matter Interactions, Einstein's coefficients. Basics		
		of Laser- Population inversion, Pumping, Optical Resonator,		
06		Metastable state etc. Laser Beam Characteristics.	4	
		Laser Systems - Ruby laser, He-Ne Laser, Semiconductor		
		Laser, Nd-YAG Laser. Engineering applications of Laser.		
	linetura alconetta in tra	De Broglie hypothesis of matter waves; properties of matter		
07	Introduction to Quantum Physics	waves. Physical interpretation of wave function	2	
		Introduction to Schrodinger's equations		
	Total			

Suggested List of Practicals:

- 1. Half Wave Rectifier
- 2. Full Wave Rectifier
- 3. Electric Motor
- 4. Transformer
- 5. Transistor as a switch
- 6. Transistor in CB and CE mode
- 7. Energy Band of a Semiconductor
- 8. Hall Effect
- 9. Light Emitting Diode
- 10. Solar Cell
- 11. Zener Diode
- 12. PN-junction diode
- 13. Wavelength of LASER using grating
- 14. Divergence of LASER beam
- 15. Grove depth of CD using LASER
- 16. Determination of diameter of wire/hair or thickness of paper using Wedge shape film method.
- 17. Determination of refractive index of water using Newton's Ring.

Suggested Online Courses:

- 1. Physics of silicon solar cells Offered by École Polytechnique. https://www.coursera.org/learn/physics-silicon-solar-cells
- 2. Semiconductor Physics Offered by University of Colorado Boulder https://www.coursera.org/learn/semiconductor-physics

Text Books:

1. S.M. Sze, "Physics of Semiconductor Devices", John Wiley

- 2. B. Streetman, and S. Banerjee "Solid State Electronics", Prentice Hall India, 2006

Course Name: Structured Programming

Course Code: ES04

Category: Engineering Science

Preamble:

To provide exposure to problem-solving by developing an algorithm, flowchart and implement the logic using C programming language.

Course Objectives:

- 1. The course aims to provide exposure to problem solving through programming
- 2. It aims to train students the basic concepts of C programming language
- 3. The course involves a lab component to give students hands on experience with the concepts
- 4. It aims to provide exposure to handling data through files

Course Outcomes:

Learner will be able to:

- CO1: Understand the fundamentals of a programming language.
- CO2: Apply the control structures for code optimization and hence improving efficiency.
- CO3: Decompose a problem and solve it using modular programming.
- CO4: Demonstrate the use of derived and user derived data types for collection and processing of data.
- CO5: Understand the concept of pointers and files to solve the problems related to dynamic and persistent data.

Course Scheme:

Contact Hours		Credits A	Assigned

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Fundamentals of C	Character Set, Identifiers and Keywords, Data Types, Constants and Variables Operators, Math Library Functions, Expressions, Pre- processor Directives	4
2	Input and Output	Unformatted and Formatted I/0 Function scanf() Function printf() Concept of Field width, Precision and Flags Basic Programs Based on Computation	2
3	Control Structures	Conditional Branching - if, if-else statement, nested if-else, and switch-case statement. Looping – for loop, while and do-while loop, nested loops Unconditional Branching – break and continue statement	6
4	Functions	Introduction of Functions Declaration and definition of a Function Calling a Function and passing arguments to a Function Concept of Global and Local Variables Storage Classes –Auto , Extern , Static, Register Recursion	
5	Arrays, Strings and Structures	Array-Concepts, Declaration, Definition, Accessing array element, One-dimensional and Multidimensional array. String- Basic of String, Array of String, Functions in string. h Structure- Declaration, Initialization, Nested structure, Operation on structures, Array of Structure.	6
6	Pointers and Files	Pointer: Pointer Variables, Reference and Dereference Operators, void Pointer, Call by Reference, Pointer Arithmetic, Pointer to Pointer, Pointers and Array, Passing Arrays to Function, Array of Pointers and Dynamic Memory Allocation. Files: Types of File, File operation- Opening, Closing, Creating, Reading, Processing File.	6
		Total	30

Suggested List of Practicals:

Learners are expected to perform minimum 12 practicals based on the following suggested topics.

Sr. No.	Suggested Topic(s)	Number of Experiments
1	Computation Based Programs	1

Sr. No.	Suggested Topic(s)	Number of Experiments
2	Programs using if else and nested if else	2
3	Programs using switch case	2
4	Programs using for loop	3
5	Programs using while loop	2
6	Programs on Functions	2
7	Programs on Recursion	2
8	Programs using 1D and 2D Arrays	3
9	Programs using Strings	2
10	Programs on Structures	2
11	Programs using Call by Reference	1
12	Programs using Dynamic Memory Allocation	1
13	Programs on Files	2

Course Name: Basic Electrical Engineering

Course Code: ES08

Category: Engineering Sciences

Preamble:

This course introduces learners to basic techniques for electrical circuit analysis.

Pre-requisites:

- 1. Current Electricity, Electromagnetic Induction, Electromagnetism.
- 2. Complex numbers and Matrices

Course Objectives:

- To enable learners to gain understanding of the D.C circuit analysis and different network theorem
- To facilitate learners in developing the skills analysing single and three phase AC circuits.
- To create awareness of single-phase transformer working.
- To introduce electrical machines applications.

Course Outcomes:

Learner will be able to

- 1. Evaluate DC circuits using different network theorems.
- 2. Evaluate 1-Φ circuit and 3-Φ AC circuits.
- 3. Illustrate the constructional features and operation of $1-\Phi$ transformer.
- 4. Understand different types of DC and AC motors.

However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours	
		Kirchhoff's Laws, Ideal and practical voltage and current Sources,		
	DC Circuits	Source Transformation, Star-Delta / Delta-Star Transformations,		
1	(Only Independent	Mesh and Nodal Analysis, Superposition Theorem	10	
	Sources)	Thevenin's Theorem, Norton's Theorem and Maximum Power		
		Transfer Theorem.		
		AC Circuits: Generation of alternating voltage, basic definitions,		
	AC Circuits	average and R.M.S. values, phasor and phase difference, sums on	8	
2		phasors.		
۷		Single-phase ac series and parallel circuits consisting of R, L, C, RL,		
		RC, RLC combinations, definitions -real, reactive and apparent		
		power, admittance (Y), Series and parallel resonance, Q factor		
3	Three Phase AC	Generation of Three-Phase Voltages, voltage & current relationships	3	
3	circuits	in Star and Delta Connections, Power Measurement	5	
	Cinala Dhaca	Working principle, EMF equation, Transformer losses, Comparison		
4	Single Phase Transformer	between Actual (practical) and ideal transformer, Performance	5	
	rransionner	parameters, Phasor diagram		
5	Motors and	DC motors, AC motors, Servo motors, Stepper motors, BLDC and	4	
<u> </u>	applications	their applications.	4	
		Total	30	

Suggested List of Practicals:

- 1. To measure output voltage across load resistor/current through load resistor and verify the result using Mesh and Nodal analysis.
- 2. To verify of Superposition Theorem.
- 3. To verify Thevenin's Theorem.
- 4. To verify Norton's Theorem.
- 5. To verify Maximum Power Transfer Theorem.
- 6. To find the resistance and inductance of a coil connected in series with a pure resistance
- 7. To find resonance conditions in a R-L-C series resonance circuit
- 8. To measure relationship between phase and line, currents and voltages in three phase system (star & delta)
- 9. To measure Power and phase in three phase system by two wattmeter method.
- 10. To find the equivalent circuit parameters by conducting OC and SC test on single phase transformer

Course Name: Engineering Mechanics

Course Code: ES02

Category: Engineering Science

Preamble:

To improve the skill sets to understand forces and motions associated with particles and rigid bodies. This course also imparts and inculcate students to understand force system and its effects.

Pre-requisites:

Basic Mathematics and Physics

Course Outcomes:

Learner will be able to:

CO1: Ability to understand and analyse forces, force systems and equilibrium.

CO2: Understand and verify law of Moments.

CO3: Determine the centroid of plane lamina.

CO4: Evaluate co-efficient of friction between the different surfaces in contact.

CO5: Understand and apply basic concepts of Kinematics of particles and kinematics of rigid bodies.

Course Scheme:

Contact Hours		Credits A	Assigned
Theory	Practical	Theory	Practical
2	2	2	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	15	20	40	075
Practical	25	-	25	050

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module name	Content	No. of Hours
1	System of Coplanar Forces	Introduction to Force and Force systems (Concurrent, Parallel and General coplanar force system), resolution composition and resultant of force systems. Principle of transmissibility of a force, Moment of force about a point, Couples, Varignon's Theorem. Force couple system.	6
2	Centroid	First moment of Area, Centroid of Regular composite plane Laminas	4
3	Equilibrium	Equilibrium of rigid beams: Free body diagrams. Conditions of equilibrium. Types of supports & types of loads. Determination of supports reactions for different types of loads on the beams.	5
4	Friction	Coefficient of static and dynamic friction, Laws of friction, Angle of Friction, Angle of Repose. Concept of Cone of friction. Equilibrium of bodies on horizontal & inclined plane.	4
5	Kinematics of Particle	Uniformly accelerated motion along straight line, motion under gravity, Projectile Motion.	7
6	Kinematics of Rigid Bodies	Introduction to different types of motion a Rigid body performs viz. Translation, Rotation and General Plane motion. Concept of Instantaneous Centre of rotation (ICR) for the finding velocity. Locating ICR for multiple link mechanism. Velocity analysis of rigid body using ICR.	4
		Total	30

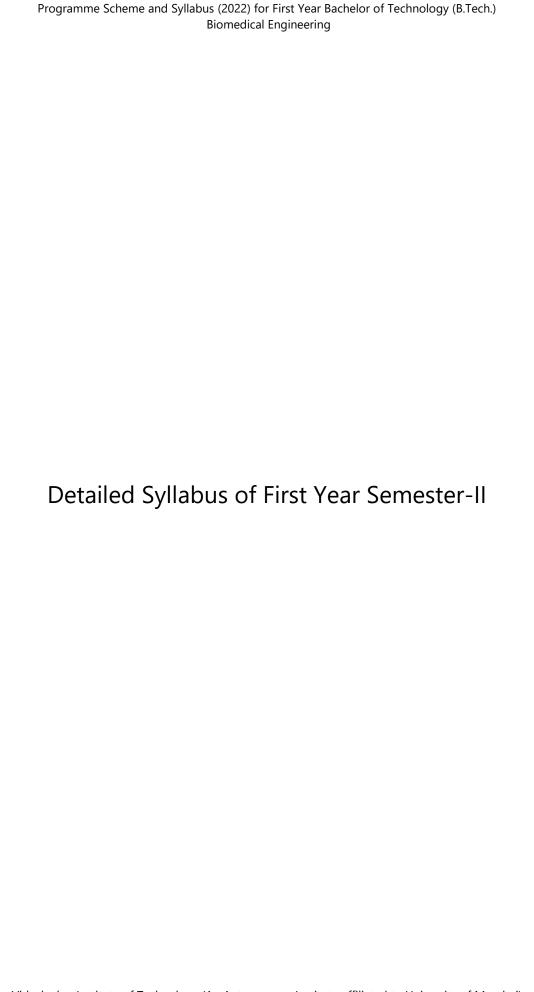

Suggested List of Practicals:

- 1. Verification of principle of moment /Bell crank Lever- By using simulation software
- 2. Determination of support reactions of simply supported beam -By using simulation software
- 3. Determination of coefficient of friction using inclined plane method By using simulation software
- 4. Projectile Motion By using simulation software
- 5. Verification of Law of Polygon of coplanar Forces- By using simulation software
- 6. Determine the Centroid of plane lamina By using simulation software

Course Name: Professional Skills

Course Code: HS02

Category: Humanities, Social Sciences and Management Courses

Preamble:

The course will groom learners in the areas of developing professional etiquettes, building digital profiles, imbibing workplace ethics, and organizational behavior. This course will also be an essential guide in building business communication and soft skills concepts.

Pre-requisites:

Effective Communication

Course Objectives:

- To introduce the concepts of the job application process and digital profile building.
- To create awareness of professional etiquettes and corporate culture in tune with 21st Century soft skills.
- To enable learners to enrich their personality through self-awareness and SWOT analysis and understand various interpersonal skills required for the workplace.
- To build the foundations of professional ethics and corporate social responsibility among learners.

Course Outcomes:

Learner will be able to:

- CO1: Apply the traits of a suitable candidate for a job/higher education, upon being trained in the techniques of holding a group discussion, facing interviews and writing resume.
- CO2: Acquire basic proficiency in building a digital profile by demonstrating an awareness of professional and ethical responsibilities.
- CO3: Understand the nuances of professional etiquettes and professionalism.
- CO4: Enrich their personality through SWOT analysis, identify their personality traits and learning styles
- CO5: Develop interpersonal skills to build effective professional relations.
- CO6: Demonstrate awareness of contemporary issues, knowledge of ethical responsibilities and CSR.

Course Scheme:

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours		
		Job Application & Resume Writing			
1	Employment Skills	Group Discussion			
'		Interview Skills	10		
		Digital Profile Building (ePortfolio, LinkedIn)			
		Corporate Grooming and Workplace Etiquette			
2	Professional	Telephone Etiquette	4		
۷	Etiquettes	Netiquettes	4		
		Digital Footprints, Social Media, Personal Profile Privacy			
		Assertiveness, Negotiation			
3	Interpersonal	Leadership, Team Building	6		
3	Skills	Problem Solving, Decision Making			
		Cultural and Emotional Intelligence			
		Introduction to Ethics			
		Plagiarism and Online Plagiarism Checker			
		Patents			
4	Ethics	Trademark and Copyrights and GI – Geographical Indicators	4		
		Professional Ethics			
		Corporate Social Responsibility (CSR) Information			
		Confidentiality			
		SWOT Analysis and JOHARI window			
	Porconality.	Developing Positive Attitude			
5	Personality Enrichment	Personality Types and Learning Styles	4		
	Ennement	Vision and Goal Setting			
		Stress Management and Time Management			
		Creative Thinking			
6	21st Century Skills	Critical Thinking	2		
		Collaboration and Communication			
		Total	30		

Suggested list of Practicals:

- 1. Icebreakers Introducing others
- 2. GD Practice Session
- 3. Final GD
- 4. Digital Profiling
- 5. Role Play on Professional Etiquettes
- 6. Personality Enrichment
- 7. Seminar on Interpersonal Skills
- 8. Case Studies on Ethics

Suggested list of Assignments:

- 1. Draft a Cover Letter and a Resume in response to a job vacancy advertisement (Individual)
- 2. Role plays and documentation on Professional Etiquettes (Group)
- 3. Role Play and documentation on Interpersonal Skills (Group)
- 4. Analysis of case studies on Ethics (Individual)
- 5. SWOT Analysis (Individual)
- 6. Assignment on 21st Century Skills Group)

Course Name: Engineering Mathematics-II

Course Code: BS04

Category: Basic Science

Preamble:

The objective of the course is to develop the basic Mathematical skills of engineering learners that are imperative for effective understanding of engineering subjects. The topics introduced will serve as basic tools for specialized studies in many fields of engineering and technology, impart fundamental knowledge of Differential Equations of First Order, Higher Order, Special functions like Beta and Gamma Function, Double and Triple Integration, DUIS, Rectification, Numerical solutions of Differential Equations and Numerical Integration.

Pre-requisites:

Fundamentals of Integration and Differential Equations.

Course Objective:

- To recall and remember basics of differential equations, integral Calculus
- To apply methods to solve engineering problems.
- To solve and evaluate the problems using Multiple Integration, Numerical Integration.
- To analyze problems based on Numerical Methods for solving differential Equations

Course Outcomes:

Learner will be able to:

- CO1: Illustrate the concept of Exact Differential equation and solution of various types of First Order First Degree Differential Equations.
- CO2: Illustrate the concept of Complementary Function and Particular Integral and solution of Linear Differential Equations with constant coefficients.
- CO3: Illustrate the concepts of Beta, Gamma function and DUIS.
- CO4: Illustrate the concept of Double Integral in Cartesian and Polar form, change the order of Integration, Evaluate Double Integral over a given region.
- CO5: Illustrate the concept of changing to polar coordinates in double integrals. Application of double integrals to compute Area, Evaluation of Triple Integration.
- CO6: Illustrate the concept of Numerical solution of Ordinary Differential Equation, and Numerical integration using various methods.

.

Course Scheme:

Contact Hours		Credits A	Assigned
Theory	Practical	Theory	Practical
3	-	3	-

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	20	30	50	100
Practical	-	-	-	-

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Differential Equations of FirstOrder and First Degree	Exact differential Equations, Equations reducible to exact form by using integrating factors. Linear differential equations (Review), equation reducible to linear form, Bernoulli's equation	7
2	Linear Differential Equations with Constant Coefficients and Variable Coefficients of Higher Order	Linear Differential Equation with constant coefficient-complementary function, particular integrals of differential equation of the type $f(D)y = X$ where X is e^{ax} , $\sin(ax + b)$, $\cos(ax + b)$, x^m , m is positive integer, $e^{ax}V$, x . V or X . Method of variation of parameters	8
	Beta and GammaFunction		
3	and Differentiation under Integral Sign	Beta and Gamma functions and its properties. Differentiation under integral sign with constant limits of integration.	7
4	Multiple Integration-1	Double integration-definition, Evaluation of Double Integrals. (Cartesian & Polar), Evaluation of double integrals by changing the order of integration. Evaluation of integrals over the given region. (Cartesian & Polar)	8
5	Multiple Integration-2	Evaluation of double integrals by changing to polar coordinates. Application of double integrals to compute Area, Triple integration definition and evaluation (Cartesian, cylindrical and spherical polar coordinates).	8

Module No.	Module Name	Content	No. of Hours
	Numerical solution of		
	ordinary differential	Numerical solution of ordinary differential equation using	
	equations of firstorder and	Euler's method and Runge-Kutta fourth order method	
_	firstdegree, and Numerical	Numerical integration-by Trapezoidal, Simpson's 1/3rd	7
6	Integration	and Simpson's 3/8th rule .	/
		Total	45

Text Books:

Course Name: Engineering Chemistry

Course Code: BS16

Category: Basic Science

Preamble:

This course imparts learners sound knowledge on the fundamentals of chemistry which can be applied in various courses and projects taken in Electronics and Computer Science, Electronics and Telecommunication and Biomedical Engineering.

Pre-requisites:

Basic Chemistry

Course Objectives:

- 1. The contents of this course will aid in quantification and understand the applications of several concepts in Chemistry.
- 2. To appreciate the need for and importance of engineering chemistry for industrial and domestic use.
- 3. To gain the knowledge on existing and future upcoming materials used in device fabrication.
- 4. To impart knowledge of green chemical technology and its applications.
- 5. To enhance the thinking capabilities in line with the modern trends in engineering and technology.

Course Outcomes:

Learner will be able to:

- CO1: Interpret properties, synthesis, and uses of important materials in various engineering applications.
- CO2: Apply the fundamentals of electrochemistry in prevention & control measures related to corrosion of structures and devices.
- CO3: Rationalise different types of batteries and their real-life engineering applications.
- CO4: Analyse different spectroscopic techniques and study fundamentals of electromagnetic spectrum.
- CO5: Associate Green Chemistry principles in product development knowledge.

Course Scheme:

Contact Hours		Credits A	Assigned
Theory	Practical	Theory Practica	
2	2	2	1

However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Polymer Chemistry	Introduction to Polymer, Properties of Polymers- Molecular weight, numerical problems on molecular weight, Glass transition temperature Methods of polymerization, Synthesis, Properties and Uses of commercially important polymers, Study of Speciality polymers like Conducting polymers, Liquid Crystal Polymer etc., Applications of Polymers	6
2	Electrochemistry and Corrosion	Electrochemistry- Basics, Types of electrochemical cells, Electrochemical series and Galvanic series, Nernst equation, Numerical problems, Construction & Application of various electrodes Corrosion- Chemical and Electrochemical corrosion, Mechanism, Types- Differential aeration, Galvanic, Stress, Intergranular, Microbial, Soil corrosion etc., Prevention and control Measures, Case studies like- Corrosion in human body implants & Corrosion in electronic gadgets	6
3	Energy Storage systems	Fundamentals of Energy storage, primary cells and secondary cells, Types of Batteries, Construction and application of Li-Ion battery Fuel cells- principle, components of fuel cell, types of fuel cell, applications, advantages and disadvantages, hydrogen production and hydrogen storage system Numerical problems	4
4	Chemistry of Semiconductors	Silicon & Germanium - Physical and chemical properties, Isotopes, Chemistry of compounds like GaAs, GaP, InP. InGaAs, ZrO, HfO and applications in industry	3
5	Engineering Materials	Nanomaterials: Introduction, Graphene, Fullerenes, Carbon nanotubes, Electronic and Mechanical properties, Synthesis of CNT, Role of nano materials in electronics, Photonics, MEMS, Energy Nano-bio application	5

Module No.	Module Name	Content	No. of Hours
		Composite Materials: Types, properties, and industrial	
		applications	
		Shape Memory alloys: Principle, properties, super elasticity-	
		One way and two-way shape memory effect, Austenite and	
		martensite transformations, applications	
		Smart Materials: Self-Assembled Nanostructures - Energy	
		Harvesting Materials, Intelligent Materials – Magneto strictive	
		Materials	
6		Fundamentals of Spectroscopy, Electromagnetic spectrum,	
	Spectroscopic	Different Forms of Spectroscopy, Beer-Lambert's law-	4
	techniques	Numerical problems, Techniques, Instrumentation and	
		applications in Medicines and electronics	
7	Green Chemistry	12 Principles of Green Chemistry & application in green	2
		computing & Green Electronics, Numerical problems	
Total			

Suggested List of Practicals:

- 1. To determine free acid pH of different solutions using pH meter
- 2. To determine the Wavelength of Maximum Absorbance using colorimeter.
- 3. To determine metal ion concentration using colorimeter.
- 4. To determine Molecular weight of polymers by Oswald Viscometer.
- 5. To synthesize UF, PF, Nylon 66.
- 6. To synthesize biodegradable polymer.
- 7. To determine Viscosity of oil by Redwood Viscometer
- 8. To separate pigments using paper chromatography.
- 9. To determine total, temporary, and permanent hardness of water sample by EDTA method.
- 10. To construct the battery and measure potential difference across two terminals
- 11. To identify the materials and learn their properties
- 12. To set up a galvanic cell
- 13. To set up an electrolytic cell and carry out electroplating
- 14. To carry out etching of the Printed Circuit Board (PCB)
- 15. To synthesize a nanomaterial and study its characterization
- 16. To detect the adulteration in given milk sample
- 17. Virtual experiment on Nanomaterial using open-source tool- www.nanohub.org
- 18. Virtual experiments using open-source tool https://vlab.amrita.edu

Course Name: Engineering Graphics

Course Code: ES01

Category: Engineering Science

Preamble:

To improve the visualization skills of the students, with imparting the student's ability to read a drawing. This course also imparts and inculcate students to understand the theory of projection.

Pre-requisites: Basic Geometry

Course Outcomes:

Learner will be able to:

CO1: Understand conventional method and usage of CAD software.

CO2: Apply the basic principles of projections and visualization to communicate ideas graphically.

CO3: Construct the drawing of curves, points, straight lines, and planes using concept of projections.

CO4: Interpret the three-dimensional pictorial objects and represent in two-dimensional views.

CO5: Construct three dimensional shapes from two dimensional views using the concept of projections.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
2	2	2	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	15	20	40	75
Practical	25	-	25	50

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Introduction to Engineering Graphics and CAD	Introduction and importance of engineering graphics. Introduction of different types of the quadrants, method of projection, lines and dimensioning. Drawing instruments and their usage. Introduction Computer Aided Design and Drafting (CADD or CAD) software and operations, menu system and toolbars.	3
2	Engineering Curve	Basic construction of cycloid, involutes, and helix of cylinder.	4
3	Projection of points, lines	Projections of lines, inclined to both the reference planes HP and VP as per the first angle projection method.	4
4	Projection of Planes	Projection of rectangular, triangular, square, pentagonal, hexagonal, and circular planes, inclined to both the reference planes HP and VP as per the first angle projection method.	4
5	Orthographic Projections	Drawing orthographic views from pictorial projections. Sectional orthographic Projections of a simple machine part as per the first angle projection method. - By drafting in the sketchbook as well as on CAD software. CAD Drawing: Applying dimensions to objects, applying annotations to drawings, setting up and use of layers, changing of the line properties, Printing setup and procedure. Different CAD Tools and usage- Draw tools, modify tools, properties, copy selection, dimensioning and editing (text height and arrow size).	9
6	Isometric Views	Drawing Isometric views from given views of simple blocks with plane, cylindrical surfaces, and circular holes. - By drafting in the sketchbook as well as on CAD software CAD Drawing: Switching to isometric drafting mode, switch /change to different ISO planes, ISO circles on different ISO planes, Different CAD Tools and usage- Draw tools, Modify tools, Properties of line.	6
		Total	30

Suggested List of Practicals:

Learners are expected to perform minimum 12 practicals based on the following suggested topics, using Computer Aided Design (CAD) tool.

Sr. No.	Suggested Topic(s)	Number of Practicals
1	Orthographic Projection (Without Section)	4
2	Orthographic Projection (with section)	4
3	Isometric Views	4
4	Problem Based Learning (PBL) on AutoCAD	2

Course Name: Object Oriented Programming

Course Code: ES05

Category: Engineering Science

Preamble:

The course aims to advance learners knowledge in problem solving and programming principles for real world applications through object-oriented programming using Java language. The course emphasizes data abstraction and object-oriented programming design through the implementation of classes, objects and related concept like Inheritance, Polymorphism, Exception Handling, Multithreading and Applets.

Course Objectives:

- 1. The course aims to provide exposure to problem solving through object oriented programming
- 2. It aims to train students the basic concepts of Java programming language
- 3. The course involves a lab component to give students hands on experience with OOP concepts
- 4. It aims to provide exposure to develop a web based application

Course Outcomes:

Learner will be able to:

CO1: Apply fundamental Programming Constructs.

CO2: Illustrate the concept of packages, classes, and objects.

CO3: Elaborate the concept of strings, arrays, and vectors.

CO4: Implement the concept of inheritance and interfaces.

CO5: Implement the notion of exception handling and multithreading.

CO6: Develop webl based applications.

Course Scheme:

Course Name: Design Thinking

Course Code: GECI01

Category: General Education (Creativity and Innovation)

Preamble

Design thinking is a powerful tool for rethinking and revitalizing strategy—and for driving organizational performance. By placing customers' needs at the center of a product, service, process, or business model, you can reframe strategic challenges and develop more effective solutions. Drawing on right-brained creativity and left-brained analytics, the course on design thinking enables you to broaden your strategic perspective, find novel opportunities for innovation, and keep your business moving forward.

Pre-requisites:

NIL

Course Objectives:

- To provide knowledge on the concepts of Design Thinking
- To impart knowledge on the phases of Design Thinking
- To apply Design Thinking concepts

Course Outcomes:

Learner will be able to:

- 1. Understand the concepts of design thinking approaches
- 2. Create design thinking teams and conduct design thinking sessions
- 3. Apply both critical thinking and design thinking in parallel to solve problems
- 4. Apply design concept to their daily work

Course Scheme:

Course Name: Universal Human Values

Course Code: GESB02

Category: General Education (Social and Behavioral Science)

Preamble:

The present education system has become largely skill-based. The prime emphasis is on science and technology. However, science and technology can only help to provide the means to achieve what is considered valuable in terms of facilities. Value Education is a crucial missing link in the present education system. Because of this deficiency, most of our efforts may prove to be counterproductive and serious crises at the individual, societal and environmental level are manifesting.

Values and skill complement each other. Values mean importance or participation and skills mean qualities, training, and capabilities. To fulfil our aspirations both values and skills are necessary. When we identify and set the right goals and produce in right direction, this is known as value domain, the domain of wisdom. Basically we must know what really is useful to achieve human happiness, the happiness to all and for all the time.

And when we learn and practices to actualize this goal to develop the techniques to make this happen in real life, in various dimensions of human Endeavour, this is known as domain of skills. Hence, there is an essential bonding between values and skills for the success of any human endeavour.

For a happy and successful life it is important to know, explore, verify and practice universal human values, professional ethics.

Course Objectives:

- To help the student to see the need for developing a holistic perspective of life.
- To sensitize the student about the scope of life individual, family, society and nature/existence.
- Strengthening self-reflection.
- To develop more confidence and commitment to understand, learn and act accordingly.

Course Outcomes:

Learner will be able to:

CO1: Learner will become more aware of themselves and their surroundings.

CO2: Learners will be more responsible in life and will able to handle critical problems.

CO3: Learners will develop better critical ability.

CO4: Learners will be more sensible towards commitment.

CO5: Learner will be able to apply human values in day to day life.

CO6: Learner will become a responsible citizen..

Course Name: Indian Traditional Knowledge System

Course Code: GESB03

Category: General Education (Social and Behavioral Science)

Preamble:

India has a vast tradition of Sanskrit texts dealing with various scientific thoughts. Number of treatises on the topics like Agriculture, Animal Husbandry, Chemistry, Astronomy, Mathematics, Botany, etc. focus on the development of thoughts in the concerned area.

This course aims at introducing a student with various treatises on physical as well as social sciences and their contribution to modern branches of sciences. Taking into consideration the vast scope of these sciences, major treatises will be introduced in the course thereby making a student to ponder over the ancient knowledge systems of India.

Pre-requisites:

NIL

Course Outcomes:

- To facilitate the learners with the concepts of Indian traditional knowledge and to make them understand the importance of roots of knowledge system.
- It aims at imparting basic principles of thought process, reasoning and inference

Course Outcomes:

Learner will be able to:

CO1: Understand and the rich history of Indian knowledge system

CO2: Understand the different areas of contribution from India.

CO3: Apply the different principals of traditional knowledge in modern systems.

GE01\$	Internship with other Institutes (Credit Transfer)	4

Programme Scheme and Syllabus(2022) for First Year Bachelor of Technology (B.Tech.) Biomedical Engineering

For GEB01- Social Service Internship/ Project: 2 hours / week slot will be provided during the semester (in regular timetable). Additional work of 60 hours needs to be completed during the semester (besides regular timetable) or after the semester (during inter semester break). \$ GE01- Internship with other Institutes (Credit Transfer): Internship with other reputed institutes equivalent to 4 credits is recommended to be done by learner during second year inter semester break(i.e. summer break between semester 4 and semester 5) (Draft Copy of Programme Scheme and Syllabus(R-2022) Subject to approval of Academic Council, Vidyalankar Institute of Technology)

Vidyalankar Institute of Technology

(Autonomous Institute Affiliated to the University of Mumbai)

Course Objectives	 To understand the basic principles and working of life Saving Equipment. To develop skills enabling Biomedical Engineers to serve the health care indu To develop core competency and skill in the field of Biomedical Engineering anddevelop new health care systems. 	•
Course Outcomes	 Learner will be able to Distinguish between the types of pacemakers on the basis of ICHD code and thevarious circuits. Apply the knowledge of electronics to analyze defibrillator circuits. Explain the importance of use of Anesthesia machine and Capnograph durin Explain the basic principle, working and applications of surgical equipment aspects. Explain the importance of measurement of oxygen saturation in human boo ofheart lung machine during surgery. 	ng Surgery. with safety

Module	Contents	Hours
	Cardiac Pacemakers	
1	Need for a pacemaker, modes of operation, classification codes for pacemaker, external and	09
	implantable pacemaker, programmable pacemaker, Power sources for pacemakers, leads and	
	electrodes, recent developments of Implantable Pacemakers.	
	Cardiac Defibrillator	
2	Need for defibrillator, D C defibrillator, modes of operation and electrodes, performance	08
	aspects of dc-defibrillator, implantable defibrillator, cardioverter.	
	Physiotherapy equipments	
3	Basic principle, working and technical specifications of	06
3	1.Shortwave Diathermy	06
	2. Ultrasonic therapy unit	
	3. Nerve and Muscle Stimulator.	
	Surgical equipment	
4	Operation theatre Lights and Table.	08
	Surgical Diathermy machine, automated electrosurgical systems, electrodes used with surgical	
	diathermy, safety aspects in electronic surgical units.	
5	Heart Lung machine	04
5	Heart Lung Machine and types of oxygenators	04
	Oximeters	
6	Basics of oximeter, In-vitro and In-vivo oximetry, ear oximetry, pulse oximetry, skin	04
	reflectance oximeters, intravascular oximeters,

	Learning			
	To build a strong base in artificial intelligence through algorithm development.			
Course Objectives	To develop competency in logical thinking, computer programming and knowledge application.			
	To train and motivate for higher education and research in order to make contribution to state of the art health care for all			
	Learner will be able to			
	Understand the fundamental techniques and applications in neural networks, deep learning and machine learning			
Course Outcomes	Understand supervised and unsupervised learning, backpropagation and gradient descent algorithms			
	 Understand and implement efficient computational techniques using neural networks, deep learning and machine learning 			
	Design and implementation of neural network models with deep learning and machine			
	learning will be strong base for dsigning artificial intelligent systems			

Module	Contents	Hours
1	Learning methods: Introduction , types of learning, supervised learning, unsupervised learning, statistical learning, reinforcement learning, elements of reinforcement learning, model-based learning, temporal difference learning, linear regression, least squares, linear regression for polynomial regression tasks, logistic regression, model selection and validation,	06
2	Clustering: Introduction, mixture densities, k-means clustering, expectation-maximization algorithm, supervised learning after clustering, spectral clustering, hierarchical clustering, choosing the number of clusters. Decision Trees: Introduction, univariate trees, rule extraction from trees, learning rules from data, multivariate trees, clustering, overfitting and evaluation	06
3	Design and analysis of machine learning experiments: Introduction, factors, response, and strategy of experimentation, response surface design, randomization, replication, and blocking, guidelines for machine learning experiments, crossvalidation and resampling methods, measuring classifier performance	06
4	Introduction of artificial neural networks: structure and function of a biological neurons, artificial neuron models, concepts of neural network, single layer and multilayer preceptor, structure of an ANN, feed-forward neural network, gradient descent, back propagation, architectures of neural networks, optimisation of neural network model	07
5	Architecture and training the ANN: Type of learning the neural network, training of a single-layer neural network, delta rule, designing ANN models, radial basis function, overview of learning rules and parameters, activation functions, multilayer feed forward network, backpropagation networks, architecture, radial basis function network	07
6	Fundamentals of deep networks: Deep Learning, architectural principles of deep networks, parameters, layers, loss function, optimization algorithms, hyper parameters, building blocks of deep networks, architectures of deep networks, convolutional neural networks, architecture of convolutional neural networks, input layers, convolutional layers, pooling layers, fully connected layers, recurrent neural networks, architecture of recurrent neural network	07

BMD07011	Biological Modeling and Simulation	03
Course Objectives	 To understand basic concepts of modeling for designing biolog To simulate physiological processes for better understanding. To develop competency in terms of logical thinking, programming andapplication skills To train and motivate students for pursuing higher education at for developing cutting edge technologies. 	
Course Outcomes	 A learner will be able to: Categorise different types of biological models. Develop a model of a neuron using Hodgkin Huxley exp setup. Differentiate a spindle receptor and Golgi tendon bodies. Design a quantitative model for eye movement system. Understand a basic model of a thermoregulatory system. Understand the behaviour of immune system 	

Module	Contents	Time
1	Physiological modeling: Steps in modeling, purpose of modeling, lumped parameter models, distributed parameter models, compartmental modeling, modeling of circulatory system.	04
2	Model of neurons: Biophysics tools, Nernst Equation, Donnan Equilibrium, active transport (Pump) GHK equation, action potential, voltage clamp, channel characteristics, Hodgkin- Huxley conductance equations, simulation of action potential, electrical equivalent model of a biological membrane, impulse propagation- core conductor model, cable equations.	11
3	Neuromuscular system: Modeling of skeletal muscle, mono and polysynaptic reflexes, stretch reflex, reciprocal innervations, two control mechanism, Golgi tendon, experimental validation, Parkinson's syndrome.	06
4	Eye movement model: Four eye movements, quantitative eye movement models, validity criteria.	06
5	Thermo-regulatory systems: Thermoregulatory mechanisms, electrical model of thermoregulatory system, controller model, validation and application.	06
6	Modeling of other physiological systems. Modeling the immune	06
	response: Behavior of the immune system, linearized model of the immune response. Modeling of insulin glucose feedback system and Pulsatile insulin secretion

	The course introduces the students to the field of Bioinformatics.				
Course Objectives • To make students aware about the methods to characterize and manage different typesof biological data.					
To introduce students to the basics of sequence alignment and analysis.					
	Learner will be able to				
Carrier	Get introduced to the basic concepts of Bioinformatics and its signific Biologicaldata analysis.	ance in			
Course Outcomes	Apply knowledge of basic principles of mathematics and statistics.				
Outcomes	Apply existing software effectively to extract information from large databases and to use this information in computer modelling				
Apply problem-solving skills to multivariate methods in bioinformatics					
	Search and apply bioinformatics tools to analyse and interpret biologic	al data			

Module	Contents	Hours
1	Introduction to bioinformatics and biological databases: Basic principles of genetics, cells, DNA and chromosome, genes and the genome, DNA sequencing, proteomics, discovery of gene sequence. Human genome project, biological databases and their classification, genome sequence databases, protein structure databases, composite databases.	08
2	Statistical methods used in bioinformatics: Basic statistical modelling and Bayesian inference, gene expression and microarray analysis, sequence alignment, sequence pattern discovery, combining sequence and expression information.	1 10
3	Algorithms in bioinformatics: Introduction, dynamic programming and sequence alignment, Needleman—Wunsch algorithm, Greedy algorithms for Genome rearrangement, string algorithm, breakpoint graph, approximation algorithm, FASTA and BLAST algorithms	
4	Multivariate Methods in Bioinformatics: Multivariate normal distribution, multivariate hypothesis tests, principle component analysis, orthogonal factor model, linear discriminant analysis, classification methods, Naïve Bayes classification.	1 00
5	Applications and tools of bioinformatics: Sequence alignment and dotplot, DNA sequence analysis, protein sequence analysis, database similarity search, phylogenic analysis and tree construction, gene, protein and tissue microarray.	. U/

Code		ISA	MSE	ESE	Total
BMD07021	Rehabilitation Engineering	20	30	50	100

Course Code	Course Name	Credits
BMD07021	Rehabilitation Engineering	03
Course Objectives	 To Introduce the socio-legal aspects of Rehabilitation Engineering To understand the importance of Orthotics, and Prosthesis To introduce learners to basics of Kinetics and Kinematics. To understand the flow properties of blood. To understand various upper and lower limb deformities. To understand the rehabilitation management of various deformities 	
Course Outcomes	 A learner will be able to Understand the basic difference between Impairment, Disability and Hare Understand the reasons for Amputation, need of Orthosis, Prosthesis. Understand the human joint's stability. Understand the flow pattern of blood in normal and abnormal condition Understand management of simple to complex deformities Understand the rehabilitation management during paralytic conditions 	is.

Module	Contents	Hours
1	Introduction and socio-legal aspects of rehabilitation engineering: Medical rehabilitation, epidemiology of rehabilitation, preventive rehabilitation, impairment disability and handicap.	03
2	Orthotics, amputation, and prosthetics, activities of daily living (ADL): Orthotics: General principles of orthotics, biomechanics of orthotics, classification: upper & lower extremity orthotics, spinal orthotics Amputation & prosthetics: Causes of amputation, types of amputation, and levels of amputation for upper and lower extremity, preoperative and post-operative period. preprosthetic stage, endo & exo-skeletal prosthetics, classification of upper & lower limb prosthetics Activities of daily living: ADL grouping, Barthel's index of ADL, functionalindependence, measures, environmental control system, communication, ADL training.	10
3	Mechanical principles of Kinematics and Kinetics: Planar classification of position and motion, rotary and translatory motion, degree of freedom, kinematic chain theories of motion, levers, torque, parallel force, resolutionof force, calculation of muscle and joint forces Clinical application on weight and center of gravity ,applied weights and resistance, muscle force and leverage, joint forces, clinical application on stretching versus jointmobilization.	06
4	Flow properties of blood: An outline of blood rheology, constitutive equation of blood based viscometric data and Casson's equation, laminar flow of blood in a tube, fluid mechanical interaction of RBCs with a solid wall, thrombus formation and dissolution, medical application of blood rheology.	06
5	Common deformities and role of surgery in rehabilitation engineering. Types of deformities, management of 1 st and 2 nd degree deformities, common deformities oflower limb, treatment for partial foot deformities, deformities of the foot, arm Deformities, torticollis	06
6	An overview of rehabilitation of muscular dystrophy, paraplegia, and quadriplegia: Muscular dystrophy, Duchenne muscular dystrophy, rehabilitation, facioscapulohumeral muscular dystrophy Paraplegia: Etiology, mechanism of injury, identification of level of lesion, management of active spinal cord injury, rehabilitation, gait training Quadriplegia: Mobility, training, level of injury & outcome, management.	08

BMD07022	Lasers & Fibre Optics	03
Course Objectives	 To help the students to build up a detailed knowledge fabrication, and applications of lasers & fiber optics in medi To create a platform for students to have deeper undefundamental principles of lasers and Optical fibers in bio-ph 	cal engineering. erstanding on the
Course Outcomes	 Learner will be able to: Understand types of optical source and its emission proper Analyze the various types of lasers and their medical applic Familiarize the fundamentals of optical fibers. Understand the interaction of laser with tissue along with it Understand and implement the use of lasers and optical fill and sensing. 	ations ts applications

Module	Contents	Hours
1.	Introduction to optical radiation, emission & resonator: Spontaneous and stimulated emission, Einstein's coefficients, gain coefficient, laser oscillation conditions, population inversion, three and four level systems, rate equations, optical resonators and types, modes and mode stability criteria, losses in optical resonators-quality factor.	06
2.	Types of Lasers: Working principle of Ruby laser, dye laser, argon ion laser, solid state lasers- fundamental and higher harmonic generation. Detailed study of semiconductor lasers, Nd: YAG laser- flash lamp pumped and diode pumped lasers, He-Ne laser, CO2 laser, excimer laser, nitrogen laser, free electron laser, Ti: Saphire laser, rare earth doped and photonic crystal fiber basedlasers, soliton lasers. Chemical lasers, metal vapors lasers, medical applications of Lasers.	07
3.	Fundamentals of fiber optics: Classification of fibers- step index, graded index fiber, numerical aperture, modes in optical fiber, single mode and multimode fiber, V- parameter, evanescent modes, losses in fiber, dispersion in fiber, special fiber-polarization maintaining fiber, non-linear effects in optical fiber, fiber fabrication techniques, splicing.	07
4.	Photobiology & bioimaging: Interaction of light with cells and tissues, photo-processes in biopolymers, humaneye and vision, optical fiber delivery system, Optical coherence tomography, Applications of bio-imaging: bio-imaging probes and fluorophores, Endoscopy.	06
5.	Optical sensors: MM and SM fibers for sensing, Lasers & LEDs suitable for sensing, PIN & APDsfor fiber optic sensing. Principles of electro optic modulators bulk & integrated optic modulators, opticalsensor types, advantages and disadvantages of fiber optic sensors, intensity modulated sensors, interferometric sensors, rotation sensors, bio sensors.	07
6.	Laser and fiber activated therapy: Photodynamic therapy, photo-sensitizers for photodynamic therapy, tissue engineering using light, Laser system in cardiovascular disease, gastroenterology, gynecology, neurosurgery, oncology, ophthalmology, orthopedics, otolaryngology (ENT), urology, lasers and fibers in skin treatment.	06

BMD07023	Networking and Information Systems in Medicine							
Course Objectives	 To understand the fundamental component of computer Networking. To understand the functioning and configuration of various networking devices andcomponents. To understand a concept about network security. Understand various Information system used in Healthcare System To understand the healthcare IT infrastructure Understand various IHE domains 							
Course Outcome s	 Learners will be able to: Understand the fundamental components of computer networks and networkingprotocols. Understand IP addressing, functioning and configuration of various networkingdevices and components Understand concepts about network security Understand the PACS components, architecture and PACS tele radiology Understand HIS, RIS, integration of HIS/RIS/PACS, PACS archive storage Understand IHE and IHE domains 							

Module	Contents	Hours
1.	PACS Components; PACS generic workflow; PACS architectures: stand-alone, client-server, and web-based; PACS and teleradiology	06
2.	Introduction to RIS and HIS, HIS/RIS/PACS integration; PACS archive storage: RAID; HIPPA	06
3.	Integrating Healthcare Enterprise: IHE workflow model, IHE domains, IHE patient information reconciliation profile, IHE radiology information integration profile	06
4.	Performance of network/device parameters: bandwidth, throughput, jitter, latency network technology; types of cables and connectors, crossover and straight throughcables, colour coding of cables; OSI Model; TCP/IP, Addressing types (IP, MAC, Port& Specific)	08
5.	IP V4 addressing, subnetting, supernetting; IP V6 addressing; Detailed working of networking equipment: Hub, bridge , switch, router, modem	07
6.	Basic Security Concepts: Security Mechanism and security services, authentication, authorization, confidentiality, integrity, non-repudiation; Symmetric and asymmetric key cryptography, RSA algorithm	06

Textbooks:

- 1. PACS and Imaging Informatics by H.K. Huang, Second Edition, Wiley and Blackwell.
- 2. PACS: A Guide to the Digital Revolution by Keith J. Dreyer, Springer.

BMI0701	Product Life Cycle Management	20	30	50	100

	To familiarize the students with the need, benefits and components of PLM
	To acquaint students with Product Data Management & PLM strategies
Course	To give insights into new product development program and guidelines for designing
Objectives	and developing a product
	To familiarize the students with Virtual Product Development
	Upon successful completion of this course, the learner will be able to:
	Gain knowledge about phases of PLM, PLM strategies and methodology for PLM
	feasibility study and PDM implementation.
Course	Illustrate various approaches and techniques for designing and developing
Outcomes	products.
	Apply product engineering guidelines / thumb rules in designing products for
	moulding, machining, sheet metal working etc.
	Acquire knowledge in applying virtual product development tools for components,
	machining and manufacturing plant

Module	Detailed						
	Contents						
	Introduction to Product Lifecycle Management (PLM):						
	Product Lifecycle Management (PLM), Need for PLM, Product Lifecycle Phases,						
	Opportunities of Globalization, Pre-PLM Environment, PLM						
1	Paradigm,Importance & Benefits of PLM, Widespread Impact of						
	PLM, Focus andApplication, A PLM Project, Starting the PLM Initiative, PLM						
	Applications PLM Strategies: Industrial strategies, Strategy elements, its						
	identification, selection and implementation, Developing PLM Vision and PLM Strategy,						
	Change						
	management for PLM						

	·	
2	Product Design and Development Process, Engineering Design, Organization and Decomposition in Product Design, Typologies of Design Process Models, Reference Model, Product Design in the Context of the Product Development Process, Relation with the Development Process Planning Phase, Relation with the Post design Planning Phase, Methodological Evolution in Product Design, Concurrent Engineering, Characteristic Features of Concurrent Engineering, Concurrent Engineering and Life Cycle Approach, New Product Development (NPD) and Strategies, Product Configuration and Variant Management, The Design for X System, Objective Properties and Design for X Tools, Choice of Design for X Tools and Their Use in the Design Process	09
3	Product Data Management (PDM): Product and Product Data, PDM systems and importance, Components of PDM,Reason for implementing a PDM system, financial justification of PDM, barriers to PDM implementation	05
4	Virtual Product Development Tools: For components, machines, and manufacturing plants, 3D CAD systems and realistic rendering techniques, Digital mock-up, Model building, Model analysis, Modeling and simulations in Product Design, Examples/Case studies	05
5	Integration of Environmental Aspects in Product Design: Sustainable Development, Design for Environment, Need for Life CycleEnvironmental Strategies, Useful Life Extension Strategies, End-of-Life Strategies, Introduction of Environmental Strategies into the Design Process, Life Cycle Environmental Strategies and Considerations for Product Design	05
6	Life Cycle Assessment and Life Cycle Cost Analysis: Properties, and Framework of Life Cycle Assessment, Phases of LCA in ISO Standards, Fields of Application and Limitations of Life Cycle Assessment, Cost Analysis and the Life Cycle Approach, General Framework for LCCA, Evolution of Models for Product Life Cycle Cost Analysis	05

	99	3		3		3

Course Code	Course Name		Examinati	on Scheme	
Code		ISA	MSE	ESE	Total
BMI07012	Reliability Engineering	20	30	50	100

Course Objectives	 To familiarize the students with various aspects of probability theory To acquaint the students with reliability and its concepts To introduce the students to methods of estimating the system reliability of simple and complex systems
	To understand the various aspects of Maintainability, Availability and FMEA procedure
	Upon successful completion of this course, the learner will be able to:
	Understand and apply the concept of Probability to engineering problems
C	Apply various reliability concepts to calculate different reliability parameters
Course Outcomes	Estimate the system reliability of simple and complex systems
Outcomes	Carry out a Failure Mode Effect and Criticality Analysis

Module	Detailed	Hours
	Contents	
	Probability theory: Probability: Standard definitions and concepts; Conditional	
	Probability, Baye's Theorem.	
1	Probability Distributions: Central tendency and Dispersion; Binomial, Normal,	08
	Poisson, Weibull, Exponential, relations between them and their significance.	
	Measures of Dispersion: Mean, Median, Mode, Range, Mean Deviation, Standard	
	Deviation, Variance, Skewness and Kurtosis.	
	Reliability Concepts: Reliability definitions, Importance of Reliability, Quality	
	Assurance and Reliability, Bath Tub Curve.	
	Failure Data Analysis: Hazard rate, failure density, Failure Rate, Mean Time ToFailure	
2	(MTTF), MTBF, Reliability Functions.	80
	Reliability Hazard Models: Constant Failure Rate, Linearly increasing, Time	
	Dependent Failure Rate, Weibull Model. Distribution functions and reliability	
	analysis.	
	System Reliability:	
3	System Configurations: Series, parallel, mixed configuration, k out of n structure,	05
	Complex systems.	

4	Reliability Improvement: Redundancy Techniques: Element redundancy, Unit redundancy, Standbyredundancies. Markov analysis. System Reliability Analysis – Enumeration method, Cut-set method, Success Path method, Decomposition method.	08
5	Maintainability and Availability: System downtime, Design for Maintainability: Maintenance requirements, Design methods: Fault Isolation and self-diagnostics, Parts standardization and Interchangeability, Modularization and Accessibility, Repair Vs Replacement. Availability – qualitative aspects.	05
6	Failure Mode, Effects and Criticality Analysis: Failure mode effects analysis, severity/criticality analysis, FMECA examples.Fault tree construction, basic symbols, development of functional reliability block diagram, Fau1t tree analysis and Event tree Analysis	05

	The course is blend of Management and Technical field.
Course Objectives	Discuss the roles played by information technology in today's business and define various technology architectures on which information systems are built
Objectives	 Define and analyze typical functional information systems and identify how they meetthe needs of the firm to deliver efficiency and competitive advantage Identify the basic steps in systems development
	Upon successful completion of this course, the learner will be able to:
	Explain how information systems Transform Business
Course	Identify the impact information systems have on an organization
Outcomes	Describe IT infrastructure and its components and its current trends
	Understand the principal tools and technologies for accessing information from databases to improve business performance and decision making
	Identify the types of systems used for enterprise-wide knowledge management and how they provide value for businesses

Module	Detailed	Hours
	Contents	
	Introduction To Information Systems (IS):	
1	Computer Based Information Systems, Impact of IT on organizations, Importance of IS	04
	to Society. Organizational Strategy, Competitive Advantages and IS	
	Data and Knowledge Management: Database Approach, Big Data, Data	
2	warehouse and Data Marts, Knowledge Management	07
	Business intelligence (BI): Managers and Decision Making, BI for Data analysis	
	and Presenting Results	
3	Ethical issues and Privacy:	07
	Information Security. Threat to IS, and Security Controls	

4	Social Computing (SC): Web 2.0 and 3.0, SC in business-shopping, Marketing, Operational and Analytic CRM, E-business and E-commerce – B2B B2C. Mobile commerce.	07
5	Computer Networks Wired and Wireless technology, Pervasive computing, Cloud computing model.	06
6	Information System within Organization: Transaction Processing Systems, Functional Area Information System, ERP and ERP support of Business Process. Acquiring Information Systems and Applications: Various System development life cycle models.	08

Course	Formulate a real-world problem as a mathematical programming model.
Objectives	Understand the mathematical tools that are needed to solve optimization problems.
	Use mathematical software to solve the proposed models.
	Upon successful completion of this course, the learner will be able to:
	• Understand the theoretical workings of the simplex method, the relationship between a
Course	linear program and its dual, including strong duality and complementary slackness.
Outcomes	 Perform sensitivity analysis to determine the direction and magnitude of change of a model's optimal solution as the data change.
	• Solve specialized linear programming problems like the transportation and assignment problems, solve network models like the shortest path, minimum spanning tree, and maximum flow problems.
	 Understand the applications of integer programming and a queuing model and compute important performance measures

Module	Detailed Contents	Hours
	Introduction to Operations Research : Introduction, Structure of the Mathematical Model, Limitations of Operations Research	
	Linear Programming : Introduction, Linear Programming Problem, Requirements of LPP, Mathematical Formulation of LPP, Graphical method, Simplex Method Penalty Cost Method or Big M-method, Two Phase Method, Revised simplex method, Duality ,	
	Primal – Dual construction, Symmetric and Asymmetric Dual, Weak Duality Theorem, Complimentary Slackness Theorem, Main Duality Theorem, Dual Simplex Method, Sensitivity Analysis	
1	Transportation Problem : Formulation, solution, unbalanced Transportation problem. Finding basic feasible solutions – Northwest corner rule, least cost method and Vogel's approximation method. Optimality test: the stepping stone method and MODI method. Assignment Problem : Introduction, Mathematical Formulation of the Problem, Hungarian Method Algorithm, Processing of n JobsThrough Two Machines and m Machines, Graphical Method of Two Jobs m Machines Problem Routing Problem, Travelling Salesman Problem Integer Programming Problem: Introduction, Types of Integer Programming	14
	Problems, Gomory's cutting plane Algorithm, Branch and Bound Technique. Introduction to Decomposition algorithms.	
2	Queuing models : queuing systems and structures, single server and multi-server models, Poisson input, exponential service, constant rate service, finite and infinite population	05
3	Simulation: Introduction, Methodology of Simulation, Basic Concepts, Simulation Procedure, Application of Simulation Monte-Carlo Method: Introduction, Monte-Carlo Simulation, Applications of Simulation, Advantages of Simulation, Limitationsof Simulation	05
4	Dynamic programming . Characteristics of dynamic programming. Dynamic programming approach for Priority Management employment smoothening, capital budgeting, Stage Coach/Shortest Path, cargo loading and Reliability problems.	05
5	Game Theory . Competitive games, rectangular game, saddle point, minimax (maximin) method of optimal strategies, value of the game. Solution of games with saddle points, dominance principle. Rectangular games without saddle point – mixed strategy for 2 X 2 games.	05
6	Inventory Models : Classical EOQ Models, EOQ Model with Price Breaks, EOQ with Shortage, Probabilistic EOQ Model,	05

Course Objectives	 To understand physics and various types of disaster occurring around the world To identify extent and damaging capacity of a disaster To study and understand the means of losses and methods to overcome /minimizeit. To understand role of individual and various organization during and after disaster To understand application of GIS in the field of disaster management To understand the emergency government response structures before, during and after disaster
Course Outcomes	 Upon successful completion of this course, the learner will be able to: Get to know natural as well as manmade disaster and their extent and possible effects on the economy. Plan of national importance structures based upon the previous history. Get acquainted with government policies, acts and various organizational structure associated with an emergency. Get to know the simple do's and don'ts in such extreme events and act accordingly.

Module	Detailed Contents	Hours
	Introduction	
1	1.1 Definition of Disaster, hazard, global and Indian scenario, general perspective, importance of study in human life, Direct and indirect effects of disasters, long term effects of disasters. Introduction to global warming and	03
	climate change.	
2	 Natural Disaster and Manmade disasters: 2.1 Natural Disaster: Meaning and nature of natural disaster, Flood, Flash flood, drought, cloud burst, Earthquake, Landslides, Avalanches, Volcanic eruptions, Mudflow, Cyclone, Storm, Storm Surge, climate change, global warming, sea level rise, ozone depletion 2.2 Manmade Disasters: Chemical, Industrial, Nuclear and Fire Hazards. Role of growing population and subsequent industrialization, urbanization and changing lifestyle of human beings in frequent occurrences of manmade disasters. 	09
	Disaster Management, Policy and Administration	
3	 3.1 Disaster management: meaning, concept, importance, objective of disaster management policy, disaster risks in India, Paradigm shift in disaster management. 3.2 Policy and administration: Importance and principles of disaster management policies, command and coordination of in disaster management, rescue operations-how to start with and how to proceed in due course of time, study of flowchart showing the entire process. 	06
	Institutional Framework for Disaster Management in India:	
4	 4.1 Importance of public awareness, Preparation and execution of emergency management program. Scope and responsibilities of National Institute of Disaster Management (NIDM) and National disaster management authority (NDMA) in India. Methods and measures to avoid disasters, Management of casualties, set up of emergency facilities, importance of effective communication amongst different agencies in such situations. 4.2 Use of Internet and softwares for effective disaster management. Applications 	06
	of GIS, Remote sensing and GPS in this regard.	
5	Financing Relief Measures: 5.1 Ways to raise finance for relief expenditure, role of government agencies and NGO's in this process, Legal aspects related to finance raising as well as overall management of disasters. Various NGO's and the works they have carried out in the past on the occurrence of various disasters, Ways to approach these teams. 5.2 International relief aid agencies and their role in extreme events.	09
	Preventive and Mitigation Measures:	
6	 6.1 Pre-disaster, during disaster and post-disaster measures in some events in general 6.2 Structural mapping: Risk mapping, assessment and analysis, sea walls and embankments, Bio shield, shelters, early warning and communication 6.3 Non Structural Mitigation: Community based disaster preparedness, risk transfer and risk financing, capacity development and training, awareness and education, contingency plans. 	06
	6.4 Do's and don'ts in case of disasters and effective implementation of relief aids.

To understand the importance energy security for sustainable development and the fundamentals of energy conservation. Course To introduce performance evaluation criteria of various electrical and thermal **Objectives** installations to facilitate the energy management To relate the data collected during performance evaluation of systems for identification of energy saving opportunities. Upon successful completion of this course, the learner will be able to: To identify and describe present state of energy security and its importance. Course To identify and describe the basic principles and methodologies adopted in energy auditof **Outcomes** a utility. To describe the energy performance evaluation of some common electrical installations and identify the energy saving opportunities. To describe the energy performance evaluation of some common thermal installations and identify the energy saving opportunities To analyze the data collected during performance evaluation and recommend energy saving measures

Module	Detailed Contents	Hours				
	Energy Scenario:					
1	Present Energy Scenario, Energy Pricing, Energy Sector Reforms, Energy Security, Energy Conservation and its Importance, Energy Conservation Act-2001 and its Features. Basics of Energy and its various forms, Material and Energy balance					
2	Energy Audit Principles: Definition, Energy audit- need, Types of energy audit, Energy management (audit) approach-understanding energy costs, Bench marking, Energy performance, Matching energy use to requirement, Maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution. Elements of monitoring& targeting; Energy audit Instruments; Data and information-analysis. Financial analysis techniques: Simple payback period, NPV, Return on investment(ROI), Internal rate of return (IRR)	08				
3	Energy Management and Energy Conservation in Electrical System: Electricity billing, Electrical load management and maximum demand Control; Power factor improvement, Energy efficient equipments and appliances, starratings. Energy efficiency measures in lighting system, lighting control: Occupancy sensors, daylight integration, and use of intelligent controllers. Energy conservation opportunities in: water pumps, industrial drives, induction motors, motor retrofitting, soft starters, variable speed drives.	10				
4	Energy Management and Energy Conservation in Thermal Systems: Review of different thermal loads; Energy conservation opportunities in: Steam distribution system, Assessment of steam distribution losses, Steam leakages, Steam trapping, Condensate and flash steam recovery system. General fuel economy measures in Boilers and furnaces, Waste heat recovery, use of insulation- types and application. HVAC system: Coefficient of performance, Capacity, factors affecting Refrigeration and Air Conditioning system performance and savings opportunities.	10				
5	Energy Performance Assessment: On site Performance evaluation techniques, Case studies based on: Motors and variable speed drive, pumps, HVAC system calculations; Lighting System: Installed Load Efficacy Ratio (ILER) method, Financial Analysis.	04

 To understand the characteristics of rural Society and the Scope, Nature and Constraints of rural Development To study Implications of 73rd CAA on Planning, Development and Governance of Rural Areas
• An exploration of human values, which go into making a 'good' human being, a 'good' professional, a 'good' society and a 'good life' in the context of work life and the personal life of modern Indian professionals
To understand the Nature and Type of Human Values relevant to Planning Institutions
 Upon successful completion of this course, the learner will be able to: Apply knowledge for Rural Development. Apply knowledge for Management Issues. Apply knowledge for Initiatives and Strategies Develop acumen for higher education and research. Master the art of working in group of different nature. Develop confidence to take up rural project activities independently

Module	Contents	Hours
1	Introduction to Rural Development: Meaning, nature and scope of development; Nature of rural society in India; Hierarchy of settlements; Social, economic and ecological constraints for rural development Roots of Rural Development in India Rural reconstruction and Sarvodaya programme before independence; Impact of voluntary effort and Sarvodaya Movement on rural development; Constitutional direction, directive principles; Panchayati Raj - beginning of planning and community development; National extension services.	08
2	Post-Independence Rural Development: Balwant Rai Mehta Committee - three tier system of rural local Government; Needand scope for people's participation and Panchayati Raj; Ashok Mehta Committee - linkage between Panchayati Raj, participation and rural development.	04
3	Rural Development Initiatives in Five Year Plans: Five Year Plans and Rural Development; Planning process at National, State, Regional and District levels; Planning, development, implementing and monitoring organizations and agencies; Urban and rural interface - integrated approach and local plans; Development initiatives and their convergence; Special component plan and sub-plan for the weaker section; Micro-eco zones; Data basefor local planning; Need for decentralized planning; Sustainable rural development.	06
4	Post 73rd Amendment Scenario: 73 rd Constitution Amendment Act, including -XI schedule, devolution of powers, functions and finance; Panchayati Raj institutions - organizational linkages; Recent changes in rural local planning; Gram Sabha - revitalized Panchayati Raj; Institutionalization; resource mapping, resource mobilization including social mobilization; Information Technology and rural planning; Need for further amendments.	04
5	Values and Science and Technology Material development and its values; the challenge of science and technology; Values in planning profession, research and education. Types of Values Psychological values — integrated personality; mental health; Societal values — the modern search for a good society; justice, democracy, rule of law, values in the Indian constitution; Aesthetic values — perception and enjoyment of beauty; Moral and ethical values; nature of moral judgment; Spiritual values; different concepts; secular spirituality; Relative and absolute values; Human values—humanism and human values; human rights; human values as freedom, creativity, love and wisdom.	10
6	Ethics: Canons of ethics; ethics of virtue; ethics of duty; ethics of responsibility; Work ethics; Professional ethics; Ethics in planning profession, research and education	04

BML701	Biomedical InstrumentationIII	01
Course Objectives	 To understand the basic principles and working of life Saving Equipment To develop skills enabling Biomedical Engineers to serve the health care i To develop core competency and skill in the field of Biomedical Engineer design and develop new health care systems. 	ndustry
Course Outcomes	 Learner will be able to Design and implement basic Pacemaker circuits. Design and implement basic oscillator circuits for Surgical Diathermy. Demonstrate the knowledge of application techniques of physiotherapy Demonstrate the knowledge of application technique of oximeter 	machines.

Syllabus: Same as that of (Course Code) Biomedical Instrumentation- -III (BMI-III)

List of Experiments: (Any Seven)

- 1. Implementation and testing of basic circuit of pacemaker.
- 2. Implementation of NAND Gate Oscillator in Surgical Diathermy.
- 3. Implementation of RLC Over damped system.
- 4. Implementation of OT lights.
- 5. Demonstration of Defibrillator.
- 6. Demonstration of Pacemaker.
- 7. Demonstration of Surgical Diathermy
- 8. Demonstration of Ultrasonic Diathermy
- 9. Demonstration of Nerve and Muscle Stimulator
- 10. Demonstration of Oximeter.
- 11. Industry / Hospital visits may be conducted.

Any other experiment based on syllabus which will help learner to understand topic/concept. Group

Presentation on the latest technology in hospitals based on the topics covered in the syllabus.

In Semester Assessment (ISA):

ISA shall consist of minimum 7 experiments.

The final certification and acceptance of ISA ensures the satisfactory performance of laboratorywork and minimum passing in the ISA.

Books Recommended:

Text books:

- 1. Handbook of Biomedical Instrumentation (Third edition): R S. Khandpur. (PH Pub)
- 2. Medical Instrumentation, Application and Design: J G. Webster. (John Wiley)
- 3.Biomedical Instrumentation and measurements: Leslie Cromwell, Fred J. Weibell, Enrich A.Pfeiffer. (PHI Pub)

Course	To build a strong base in artificial intelligence through algorithm development.					
• To develop competency in logical thinking, computer programming knowledgeapplication.						
	To train and motivate for higher education and research in order to make contribution to state of the art health care for all					
Course	Learner will be able to					
Outcomes	 Understand the fundamental techniques and applications in neural networks, deeplearning and machine learning 					
	 Understand supervised and unsupervised learning, back propagation and gradientdescent algorithms 					
	Understand and implement efficient computational techniques using neural networks, deep learning and machine learning					
	 Design and implementation of neural network models with deep learning and machine learning will be strong base for designing artificial intelligent systems 					

Syllabus: Same as that of (BMC702) Machine Learning (ML)

List of Experiments: (Any Seven)

- 1 Implement the activation functions used in the neural network
- 2 Implement ANDNOT and XOR function using McCulloch-Pitts neural net
- 3 Implementation of learning rules for neural network
- 4 Implementation of backpropagation with gradient descent algorithm neural network
- 5 Design and implement the neural network model for estimation problem.
- 6 Design and implement the neural network model for classification problem
- 7 Optimize the neural network model for estimation problem.
- 8 Optimize the neural network model for classification problem.
- 9 Design and implement the neural network model for estimation problem with deep learning
- 10 Design and implement the neural network model for estimation problem with deep learningAny

other experiment based on syllabus which will help learner to understand topic/concept.

In Semester Assessment(ISA):

ISA shall consist of minimum 7 experiments.

The final certification and acceptance of ISA ensures the satisfactory performance of laboratory work and minimum passing in the ISA.

Text books

- 1. Introduction to Machine Learning, 3rd edition, Ethem Alpaydin, PHI Learning Private Limited, NewDelhi, 2015

BMP701	Major Project-I	03				
Course objective	 To apply the knowledge gained during Curriculum to develop problem statement. Conduct literature survey. Design Circuit/ Flow chart of the statement. Documentation and project report writing. 	anddesign				
Course Outcome	Learner will be able to					
	Review literature to define problem statement					
	 Apply knowledge of the engineering fundamentals acquired during the curriculum and beyond 					
	 Develop and create design using appropriate design methodologies considering the various health, society and environmental needs. 					
	Write problem statement, Design concept in prescribed format.					
	Learn the behavioral science by working in a group.					

Project Guidelines:

- 1. Learner is allotted 6 hrs per week for the project work
- 2. Learners should carry out literature survey /visit industry / analyze current trends and identify the problem for Project and finalize in consultation with Guide/Supervisor.
- 3. Group of maximum four students will be completing a comprehensive project work.
- 4. Learners should use multiple literatures and understand the problem.
- 5. Learners should attempt solution to the problem by experimental/simulation methods.
- 6. The solution to be validated with proper justification and compile the report in standard format
- 7. Learner may use this opportunity to learn different computational techniques as well as some modeldevelopment.

Faculty Load:

- 1. In semester VII 1/2 (half) period of 1/2 hour per week per project group
- 2. Each faculty is permitted to take (guide) maximum 4 (Four) project groups

In Semester Assessment(ISA):

ISA should be examined by approved internal faculty appointed by the head of the institute basedon the following:

- Scope and objective of the project work.
- Extensive Literature survey.
- Progress of the work (Continuous assessment)
- Report in prescribed University format.

Guidelines for Assessment of Project Stage-I

- 1. Project I should be assessed through a presentation jointly by Internal and External Examiners approved by the University of Mumbai
- 2. Project stage I should be assessed based on following points
 - Quality of problem selected
 - Literature Survey
 - Clarity of Problem definition and Feasibility of problem solution
 - Relevance to the specialization / Industrial trends
 - Clarity of objective and scope
 - Quality of Project Design
 - Compilation of Project Report
 - Quality of Written and Oral Presentation

 To understand the basic principles used for designing of various depart thehospital. To understand the role of Biomedical Engineer in hospital and basic departs to serve hospitals. To understand the overall functioning of various departments in the hospital 	evelop skills
 Apply the management concepts used specifically in hospital. Explain the management structure and its functions in hospital. Demonstrate the knowledge about the principles of designing and compostinical services in the hospital. Demonstrate the knowledge about the roles and responsibilities of Biomed in hospital. Demonstrate the knowledge about the functions of other Engineering auxiliaryservices in the hospital. 	ical Engineer
	Management To understand the basic principles used for designing of various depart thehospital. To understand the role of Biomedical Engineer in hospital and basic departments to serve hospitals. To understand the overall functioning of various departments in the hospital earner will be able to Apply the management concepts used specifically in hospital. Explain the management structure and its functions in hospital. Demonstrate the knowledge about the principles of designing and compostinical services in the hospital. Demonstrate the knowledge about the roles and responsibilities of Biomed in hospital. Demonstrate the knowledge about the functions of other Engineering

Module	Contents	Hours
1	Process of management: Principles of management, leadership, motivation, time management, H.R. management (recruitment, performance appraisal, training and development,), effective communication, accounting - types of Budget.	07
2	Organization of the hospital and hospital planning: Management structure, types of hospitals, governing body, hospital committee and hospital functionaries, duties and responsibilities of various positions. Guiding principles in planning hospital facilities and services and planning the hospital building	04
3	Clinical services: (Location, layout, equipment, personnel, and functions): OUT patient, IN patient (wards), intensive care, pathology laboratory & blood bank, radiology, physiotherapy, surgical operation theatre, emergency (casualty).	10
4	Biomedical engineering department: (Location, layout, equipment, personnel, and its main functions) Roles and responsibilities of a biomedical engineer in hospitals, Equipment management: maintenance types: routine(preventive) and breakdown, maintenance contracts (CMC and AMC) Purchase management: Purchase system (centralized, decentralized, local purchase), types of purchase, purchase procedures: selection of suppliers, tendering procedures, analyzing bids, price negotiations Material's (store) management: Functions of store manager, materials handling, flow of goods/FIFO, inventory control: lead-time, buffer stock, reorder level, two bin system, EOQ	09
5	Other engineering services: Engineering services (electrical, mechanical and civil): responsibilities and functions. Hospital ventilation and air conditioning, medical gas system, hospital information system.	05
6	Environment and waste management: Hospital infection control, central sterile service department (CSSD), biomedicalwaste management, disaster management.	04

Course Objectives	 To make the learner aware of fundamental concepts of Robotics To make learner study direct and Inverse Kinematics of Robots To make learner know the Trajectory and Motion planning. To make the learner know the Biomedical applications of robotics 	
Course Outcomes	 Learner will be able to To describe direct and inverse kinematics of robots. To describe workspace envelop and trajectory planning for robots To apply various image processing tools for robotic manipulation To implement motion planning solutions using various algorithms To illustrate medical applications of robots 	

Module No.	Contents	Hours
1	Introduction:	
	Automation and robots, classification, application, specification and notations.	04
2	Direct Kinematics: Dot and cross products, co-ordinate frames, rotations, homogeneous coordinates,	10
	link co-ordinates, arm equation and arm matrix derivation (two axis, three axis and	

	four axis SCARA), configuration of five axis and six axis robots (arm matrix derivation and equation not expected)		
3	Inverse kinematics:		
	General properties of solutions of inverse kinematics, methods for finding solution, tool configuration vector and inverse kinematics solution for two axis, three axis and four axis robots.	08	
	Workspace analysis, work envelope and examples, workspace fixtures, trajectory planning, pick and place operations, continuous path motion, interpolated motion, straight-line motion.		
4	Robot vision:		
	Image representation, template matching, polyhedral objects, shane analysis, segmentation (thresholding, region labelling, shrink operators, swell operators, Euler numbers, perspective transformation, structured illumination, cameracalibration).	06	
5	Task planning:	06	
	Task level programming, uncertainty, configuration, space, gross motion, planning, Grasp planning, fine-motion planning, simulation of planar motion, source and goal scenes, task planner simulation.	UO	
6	Applications in biomedical engineering:		
	Application in rehabilitation: clinical and surgery	05

Code		ISA	MSE	ESE	Total
BMD08021	Department Optional Course –6 Biomedical Microsystems (Abbreviated as BM)	20	30	50	100

Course Code						
BMDO8021						
Course Objectives	To differ state various fubilities for interior devices.					
Course Outcomes	 Understand basic property and select appropriate material for MEMS application. Develop or modify the MEMS processes for a simple MEMS device in order to fabrication time. Understand different microfabrication techniques and choose appropriate techniques. Analyse Micro total analysis system with designing of its components. Demonstrate working principles of Bio Nano-sensors and drug delivery devint types and fabrication. Understand packaging techniques used in MEMS. 	reducethe nnique				

Module	Contents	Hour
1.	 Introduction to miniaturization: Difference between Microelectronics and MEMs, Block diagram of MEMS and BIOMEMS, examples. Introduction to generalised processes used. Clean room: definition, classification, air flow system Safety in handling hazardous materials in clean room Scaling Laws in Miniaturization Substrates and Wafers: CZ process and float zone process, Wafer types Materials: Properties and applications of single crystal silicon, SiO2, Si3N4, SiC, Polysilicon, Glass Wafer cleaning processes: RCA, Piranha Positive and negative photoresist, mask, material properties of PMMA, SU8 Different projection systems, Surface characterization techniques: AFM, SEM, TEM, Ellipsometer, Profilometer 	06
2.	 MEMS Fabrication Processes Photolithography: Definition, steps, light sources (UV, DUV, EUV) PVD: definition, types: Evaporation (Thermal and E-beam) and Sputtering (DC and RF), advantages, disadvantages, Material properties of Al CVD: definition, reaction steps, types: APCVD, LPCVD, PECVD, and HWCVD, advantages, disadvantages Oxidation: Thermal Polymers coating techniques: spinning, spraying and electrodeposition Doping: definition, types: Ion implantation and Diffusion, advantages, disadvantages Etching: types: Dry etching (RIE, DRIE) and wet etching (isotropic and anisotropic), advantages, disadvantages, specific etchants 	07
3.	 Microfabrication Techniques Bulk micromachining: definition, advantages and disadvantages, Examples: pressure sensor, dissolved wafer process Surface micromachining: definition, advantages and disadvantages Examples: pressure sensor, cantilever Non polysilicon surface micromachining: SOI fabrication LIGA: definition, process steps, examples, advantages and disadvantages X-ray lithography: Synchrotron radiation, X-ray mask Molding techniques: Injection, compression, hot embossing Soft lithography: Definition, SAMs, Types: Micro Contact Printing, Material properties of PDMS, Gold, Conducting polymers Micro molding techniques: Replica molding, Microtransfer molding, Micromolding in capillaries and Solvent-assisted micromolding 	07

4.	MICRO TOTAL ANALYSIS SYSTEMS (μTAS)	07
	 Flow techniques in µ-fluidics: pressure driven force, electro-osmosis, electrophoresis Micropump, microvalves: types and fabrication Microchannels: Types and fabrication (SU8, glass, silicon) 	
	 Separation techniques: capillary electropherosis, electrochromatography, isoelectric focusing Detection techniques: fluorescence, chemiluminiscence 	
5.	 MICRO/ NANO BIOSENSORS AND DRUG DELIVERY DEVICES Biosensor: definition, block diagram Classification based on the basis of detection techniques: electric, magnetic, optical, thermal, mechanical, and chemical Basic steps involved in the development of biosensors: surface modification, immobilization, integration with transducer Design, fabrication of cantilever for antibody detection Hypodermic needles, transdermal patches: disadvantages Micro needles: solid, hollow, polymer, silicon (fabrication) Nano particles for drug delivery 	06
6	 MICROSYSTEM PACKAGING Packaging materials Levels of packaging Comparison between IC and MEMS packaging Packaging technologies: Die preparation, surface bonding, wire bonding, sealing Pressure sensor packaging 	06

Text Books:

Course						
Objectives	 To familiarize the learners with the regulatory aspects of medical devinstruments. 	vices and				
	To keep the learners abreast with the technological developments in the field of Medical devices regulatory affairs.					
Course	Learner will be able to:					
Outcomes	Discuss credibility & authorities of approvals, medical devices life classification and risk based approach for regulatory controls.	e cycle, risk based				
	• Explain principles of safety and effectiveness, quality management system, Various standards (American, European, BIS), risk management, cyber security and clinical evaluation.					
	 Describe technical documentation required by regulators, esse checklist, risk management summary report, manufacturing inforproduct submissions and regulatory submission repository. 	•				
	 Highlight premarket phase like design controls, information may premarket phase, R&D planning stage, design & development product identification & traceability. 	-				
	Perform regulatory submissions, approvals and registration.					
	Launch the product, do post market surveillance, look after products oversee quality management system and regulatory system & procedular					

Module	Contents	Hours
1.	Overview of regulatory framework for medical devices: Credibility and authority of approvals, medical devices life cycle, risk-based classification, risk-based approach for regulatory controls. Introduction to International Regulatory Requirements & Device Pathways.	07
2.	Safety & Effectiveness: Principles of safety and effectiveness, Quality management system, Standards, Risk management, Cybersecurity, Clinical evaluation. Classification of Biomedical Instruments, based on safety standards, Approach to Bioethics	07
3.	Technical Documentation: Technical documentation required by regulators, Essential requirements checklist, Risk management summary report, Manufacturing information, Regulated product submissions, Regulatory submission repository	07
4.	Premarket phase: Design controls, Information management during premarket phase, R&D planning stage, Design & development process stage,product identification & traceability, Case study	06
5.	Regulatory submissions, approvals and registration : Administrative provisions, regulatory submission and approval, International scenario	06
6.	Post market phase: Product launch, continued regulatory compliance, Post market surveillance, Product obsolescence, Quality management system, Regulatory system, and processes. Types of medical device audits. Medical device Compliance Audit	06

Course	Learner will be able to	
Outcomes	 Understand basic property and select appropriate material for MEMS application. Develop or modify the MEMS processes for a simple MEMS device in order to refabrication time. Understand different microfabrication techniques and choose appropriate techniques. Analyse Micro total analysis system with designing of its components. Demonstrate working principles of Bio Nano-sensors and drug delivery devict types and fabrication. Understand packaging techniques used in MEMS. 	reducethe hnique

Module	Contents	Hours
2.	 Introduction to Ergonomics Definition of Ergonomics and its application and overview. Ergonomics in systems design, and steps to performing a task analysis. In class practice performing a task analysis. Design Man Machine Environment System Design Overview of Human body and its sub systems. Understanding musculoskeletal system and its function in terms of manualactivities Understanding nervous system, human sensory organs and their limitations. Basic Bio mechanics and its application in design 	08
3.	 Muscle Use and Anthropometry and Workspace Anthropometry and its application Issues of cognition, perception and performance. Study of work posture and its impact on human performance. Physical environment and their impact on human performance Muscular work including dynamic and static work, nervous control of movement, skilled work and ways to improve work efficiency. Use of anthropometric data in ergonomics. Principles of workspace design, including seated work, standing work, work reaches and working heights, the office environment and visual work 	10
4.	Occupational stress and Musculoskeletal disorders; Safety and health issues Cognitive aspects of user-system interaction: Perception, information processing, user behaviour, error and risk perception;	04
5.	Principles of human factors in visual communication Visual display in different planes- static shape, size, font type and dynamic characters of display	04
6	Environmental factors influencing human performance • Participatory ergonomics aspects	04

ILO 8021	Project Management	20	30	50	100	

Course Objectives	To familiarize the students with the use of a structured methodology/approach for each and every unique project undertaken, including utilizing project management concepts, tools and techniques.
	To appraise the students with the project management life cycle and make them knowledgeable about the various phases from project initiation through closure.
	Upon successful completion of this course, the learner will be able to:
	Apply selection criteria and select an appropriate project from different options.
Course	Write work break down structure for a project and develop a schedule based on it.
Outcomes	• Identify opportunities and threats to the project and decide an approach to deal with them strategically.
	Use Earned value technique and determine & predict status of the project.
	Capture lessons learned during project phases and document them for future reference

Module	Detailed					
	Contents					
	Project Management Foundation:					
	Definition of a project, Project Vs Operations, Necessity of project management,					
1	Triple constraints, Project life cycles (typical & atypical) Project phases and stagegate					
	process. Role of project manager, Negotiations and resolving conflicts, Project					
	management in various organization structures, PM knowledge areas as per Project					
	Management Institute (PMI)					
	Initiating Projects:					
	How to get a project started, selecting project strategically, Project selection models					
2	(Numeric /Scoring Models and Non-numeric models), Project portfolio process,	06				
_	Project sponsor and creating charter; Project proposal. Effective project team, Stages	00				
	of team development & growth (forming, storming, norming					
	&performing), team dynamics.					

3	Project Planning and Scheduling: Work Breakdown structure (WBS) and linear responsibility chart, Interface; Coordination and concurrent engineering, Project cost estimation and budgeting, Top down and bottoms up budgeting, Networking and Scheduling techniques. PERT, CPM, GANTT chart, Introduction to Project Management Information System (PMIS).	08
4	Planning Projects: Crashing project time, Resource loading and levelling, Goldratt's critical chain, Project Stakeholders and Communication plan Risk Management in projects: Risk management planning, Risk identification and risk register, Qualitative and quantitative risk assessment, Probability and impact matrix. Risk response strategies for positive and negative risks	06
5	 5.1 Executing Projects: Planning monitoring and controlling cycle, Information needs and reporting, engaging with all stakeholders of the projects, Team management, communication and project meetings 5.2 Monitoring and Controlling Projects: Earned Value Management techniques for measuring value of work completed; Using milestones for measurement; change requests and scope creep, Project audit 5.3 Project Contracting Project procurement management, contracting and outsourcing, 	08
6	6.1 Project Leadership and Ethics: Introduction to project leadership, ethics in projects, Multicultural and virtual projects 6.2 Closing the Project: Customer acceptance; Reasons of project termination, Various types of project terminations (Extinction, Addition, Integration, Starvation), Process of project termination, completing a final report; doing a lessons learned analysis; acknowledging successes and failures; Project management templates and other resources; Managing without authority; Areas of further study.	06

Course	To acquaint with entrepreneurship and management of business					
Objectives	Understand Indian environment for entrepreneurship					
	Idea of EDP, MSME					
	Upon successful completion of this course, the learner will be able to:					
Course	Understand the concept of business plan and ownerships					
Outcomes	Interpret key regulations and legal aspects of entrepreneurship in India					
	Understand government policies for entrepreneurs					

Module	Detailed			
	Contents			
1	Overview of Entrepreneurship: Definitions, Roles and Functions/Values of Entrepreneurship, History of Entrepreneurship Development, Role of Entrepreneurship in the National Economy, Functions of an Entrepreneur, Entrepreneurship and Forms of Business Ownership Role of Money and Capital Markets in Entrepreneurial Development:Contribution of Government Agencies in Sourcing information for Entrepreneurship	04		
2	Business Plans and Importance of Capital to Entrepreneurship: Preliminary and Marketing Plans, Management and Personnel, Start-up Costs and Financing aswell as Projected Financial Statements, Legal Section, Insurance, Suppliers and Risks, Assumptions and Conclusion, Capital and its Importance to the Entrepreneur Entrepreneurship and Business Development: Starting a New Business, Buying an Existing Business, New Product Development, Business Growth and the			
	Entrepreneur Law and its Relevance to Business Operations			
3	Women's Entrepreneurship Development, Social entrepreneurship-role and need, EDP cell, role of sustainability and sustainable development for SMEs, case studies, exercises	05		

4	Indian Environment for Entrepreneurship: key regulations and legal aspects, MSMED Act 2006 and its implications, schemes and policies of the Ministry of MSME, role and responsibilities of various government organisations, departments, banks etc., Role of State governments in terms of infrastructure developments and support etc., Public private partnerships, National Skill development Mission, Credit Guarantee Fund, PMEGP, discussions, group exercises etc.	08
5	Effective Management of Business: Issues and problems faced by micro and small enterprises and effective management of M and S enterprises (risk management, credit availability, technology innovation, supply chain management, linkage with large industries), exercises, e-Marketing	08
6	Achieving Success In The Small Business: Stages of the small business life cycle, four types of firm-level growth strategies, Options – harvesting or closing small business Critical Success factors of small business	05

Coue		ISA	MSE	ESE	Total	
ILO8024	Human Resource Management	20	30	50	100	

Course Objectives	 To introduce the students with basic concepts, techniques and practices of the human resource management To provide opportunity of learning Human resource management (HRM) processes, related with the functions, and challenges in the emerging perspective of today's organizations To familiarize the students about the latest developments, trends & different aspects of HRM To acquaint the student with the importance of inter-personal & inter-group behavioural skills in an organizational setting required for future stable engineers, leaders and managers
Course Outcomes	 Upon successful completion of this course, the learner will be able to: Understand the concepts, aspects, techniques and practices of the human resource management. Understand the Human resource management (HRM) processes, functions, changes and challenges in today's emerging organizational perspective. Gain knowledge about the latest developments and trends in HRM. Apply the knowledge of behavioural skills learnt and integrate it with in inter personal and intergroup environment emerging as future stable engineers and managers.

Module	Detailed		
	Contents		
1	 Introduction to HR Human Resource Management- Concept, Scope and Importance, Interdisciplinary Approach Relationship with other Sciences, Competencies of HR Manager, HRM functions Human resource development (HRD): changing role of HRM – Human resource Planning, Technological change, Restructuring and rightsizing, Empowerment, TQM, Managing ethical issues 	05	
2	Organizational Behaviour (OB) Introduction to OB Origin, Nature and Scope of Organizational Behaviour, Relevance to Organizational Effectiveness and Contemporary issues	07	

	 Personality: Meaning and Determinants of Personality, Personality development, Personality Types, Assessment of Personality Traits for Increasing Self Awareness Perception: Attitude and Value, Effect of perception on Individual Decision- making, Attitude and Behaviour Motivation: Theories of Motivation and their Applications for Behavioural Change (Maslow, Herzberg, McGregor); Group Behaviour and Group Dynamics: Work groups formal and informal groupsand stages of group development, Team Effectiveness: High performing teams, Team Roles, cross functional and self-directed team. Case study 	
3	 Organizational Structure &Design Structure, size, technology, Environment of organization; Organizational Roles & conflicts: Concept of roles; role dynamics; role conflicts and stress. Leadership: Concepts and skills of leadership, Leadership and managerial roles, Leadership styles and contemporary issues in leadership. Power and Politics: Sources and uses of power; Politics at workplace, Tactics and strategies. 	06
4	 Human resource Planning Recruitment and Selection process, Job-enrichment, Empowerment – Job Satisfaction, employee morale Performance Appraisal Systems: Traditional & modern methods, Performance Counselling, Career Planning Training & Development: Identification of Training Needs, Training Methods 	05
5	 Emerging Trends in HR Organizational development; Business Process Re-engineering (BPR), BPR as a tool for organizational development, managing processes & transformation in HR. Organizational Change, Culture, Environment Cross Cultural Leadership and Decision Making: Cross Cultural Communication and diversity at work, Causes of diversity, managing diversity with special reference to handicapped, women and ageing people, intra company cultural difference in employee motivation 	06
6	HR & MIS: Need, purpose, objective and role of information system in HR, Applications in HRD in various industries (e.g. manufacturing R&D, Public Transport, Hospitals, Hotels and service industries Strategic HRM: Role of Strategic HRM in the modern business world, Concept of Strategy, Strategic Management Process, Approaches to Strategic Decision Making; Strategic Intent – Corporate Mission, Vision, Objectives and Goals Labor Laws & Industrial Relations: Evolution of IR, IR issues in organizations, Overview of Labor Laws in India; Industrial Disputes Act, Trade Unions Act, Shops and Establishments Act	10

ILO8026	Research Methodology	20	30	50	100

Course	To understand Research and Research Process
Objectives	To acquaint students with identifying problems for research and develop research strategies
	To familiarize students with the techniques of data collection, analysis of data and interpretation
	Upon successful completion of this course, the learner will be able to:
	Prepare a preliminary research design for projects in their subject matter areas
Course	Accurately collect, analyze and report data
Outcomes	Present complex data or situations clearly
	Review and analyze research findings

Module	Detailed	Hours
	Contents	
	Introduction and Basic Research Concepts	
	1.1 Research – Definition; Concept of Construct, Postulate, Proposition, Thesis,	
	Hypothesis, Law, Principle. Research methods vs Methodology	
01	1.2 Need of Research in Business and Social Sciences	09
	1.3 Objectives of Research	
	1.4 Issues and Problems in Research	
	1.5 Characteristics of Research: Systematic, Valid, Verifiable, Empirical and	
	Critical	
	Types of Research	
	2.1. Basic Research	
	2.2. Applied Research	
02	2.3. Descriptive Research	07
	2.4. Analytical Research	
	2.5. Empirical Research	
	2.6 Qualitative and Quantitative Approaches	

	Research Design and Sample Design	
	3.1 Research Design – Meaning, Types and Significance	
03	3.2 Sample Design – Meaning and Significance Essentials of a good sampling	07
	Stages in	
	Sample Design Sampling methods/techniques Sampling Errors	

	Bassayle Mathadalam.					
	Research Methodology					
	4.1 Meaning of Research Methodology					
	4.2 . Stages in Scientific Research					
	Process:					
	a. Identification and Selection of Research Problem					
	b. Formulation of Research Problem					
04	c. Review of Literature	08				
	d. Formulation of Hypothesis					
	e. Formulation of research Design					
	f. Sample Design					
	g. Data Collection					
	h. Data Analysis					
	i. Hypothesis testing and Interpretation of Data					
	j. Preparation of Research Report					
	Formulating Research Problem					
05	5.1 Considerations: Relevance, Interest, Data Availability, Choice of data, Analysisof	04				
	data, Generalization and Interpretation of analysis					
	Outcome of Research					
06	6.1 Preparation of the report on conclusion reached					
00	6.2 Validity Testing & Ethical Issues	1 04 1				
	6.3 Suggestions and Recommendation					
	are raggerians and recommendation

Code		ISA	MSE	ESE	Total
ILO8027	IPR and Patenting	20	30	50	100

Course Objectives	 To understand intellectual property rights protection system To promote the knowledge of Intellectual Property Laws of India as well as International treaty procedures To get acquaintance with Patent search and patent filing procedure and applications 				
Course Outcomes	 Upon successful completion of this course, the learner will be able to: understand Intellectual Property assets assist individuals and organizations in capacity building work for development, promotion, protection, compliance, and enforcement of Intellectual Property and Patenting 				

Module	Detailed	Hours
	Contents	
01	Introduction to Intellectual Property Rights (IPR): Meaning of IPR, Different category of IPR instruments - Patents, Trademarks, Copyrights, Industrial Designs, Plant variety protection, Geographical indications, Transfer of technology etc. Importance of IPR in Modern Global Economic Environment: Theories of IPR, Philosophical aspects of IPR laws, Need for IPR, IPR as an instrument of development	05
02	Enforcement of Intellectual Property Rights: Introduction, Magnitude of problem, Factors that create and sustain counterfeiting/piracy, International agreements, International organizations (e.g. WIPO, WTO) active in IPR enforcement Indian Scenario of IPR: Introduction, History of IPR in India, Overview of IPlaws in India, Indian IPR, Administrative Machinery, Major international treaties signed by India, Procedure for submitting patent and Enforcement of IPR at national level etc.	07
03	Emerging Issues in IPR: Challenges for IP in digital economy, e-commerce, human genome, biodiversity and traditional knowledge etc.	05

04	Basics of Patents: Definition of Patents, Conditions of patentability, Patentable and non-patentable inventions, Types of patent applications (e.g. Patent of addition etc.), Process Patent and Product Patent, Precautions while patenting, Patentspecification Patent claims, Disclosures and non-disclosures, Patent rights and	07
05	infringement, Method of getting a patent Patent Rules: Indian patent act, European scenario, US scenario, Australiascenario, Japan scenario, Chinese scenario, Multilateral treaties where India is a member (TRIPS agreement, Paris convention etc.)	08
06	Procedure for Filing a Patent (National and International): Legislation and Salient Features, Patent Search, Drafting and Filing Patent Applications, Processing patent, Patent Litigation, Patent Publication, Time frame and cost, Patent Licensing, Patent Infringement Patent databases: Important websites, Searching international databases	07

ILO 8028	Digital BusinessManagement	20	30	50	100	

Course	To familiarize with digital business concept					
Objectives	To acquaint with E-commerce					
	To give insights into E-business and its strategies					
	Upon successful completion of this course, the learner will be able to:					
Course	Identify drivers of digital business					
Outcomes	Illustrate various approaches and techniques for E-business and management					
	Prepare E-business plan					

Module	Detailed	Hours
	content	
1	Introduction to Digital Business- Introduction, Background and current status, E-market places, structures, mechanisms, economics and impacts, Difference between physical economy and digital economy. Drivers of digital business- Big Data & Analytics, Mobile, Cloud Computing, Social media, BYOD, and Internet of Things (digitally intelligent machines/services), Opportunities and Challenges in Digital Business	09
2	Overview of E-Commerce E-Commerce- Meaning, Retailing in e-commerce-products and services, consumer behavior, market research and advertisement B2B-E-commerce-selling and buying in private e-markets, public B2B exchanges and support services, e-supply chains, Collaborative Commerce, Intra business EC and Corporate portals Other E-C models and applications, innovative EC System-From E-government and learning to C2C, mobile commerce and pervasive computing EC Strategy and Implementation-EC strategy and global EC, Economics and Justification of EC, Using Affiliate marketing to promote your e-commerce business, Launching a successful online business and EC project, Legal, Ethics and Societal impacts of EC	06

2	Digital Business Support services : ERP as e –business backbone, knowledgeTope	0.0
3	Apps, Information and referral system	06
	Application Development: Building Digital business Applications and	
	infrastructure	
4	Managing E-Business-Managing Knowledge, Management skills for e-business, managing Risks in e –business, Security Threats to e-business -Security Overview, Electronic Commerce Threats, Encryption, Cryptography, Public Key and Private Key Cryptography, Digital Signatures, Digital Certificates, Security Protocols over Public Networks: HTTP, SSL, Firewall as Security Control, Public Key Infrastructure (PKI) for Security, Prominent Cryptographic Applications	06
5	E-Business Strategy -E-business Strategic formulation- Analysis of Company's Internal and external environment, Selection of strategy, E-business strategy into Action, challenges and E-Transition (Process of Digital Transformation)	04
6	Materializing e-business: From Idea to Realization-Business plan preparation	00
	Case Studies and presentations	08

BML801	Hospital Management Lab	25		25	50

Course Code	Course Name					
BML801	Hospital Management	01				
Course Objectives	To understand the basic principles used for designing of various de hospital.	partments in the				
	To understand the role of Biomedical Engineer in hospital and basic enabling to serve hospitals.	c develop skills				
	To understand the overall functioning of various departments in the	e hospital.				
Course Outcomes	Learner will be able to					
	Apply the management concepts used specifically in hospital.					
	Explain the management structure and its functions in hospital.					
	Demonstrate the knowledge about the principles of designing and of clinical services in the hospital.	d commissioning				
	• Demonstrate the knowledge about the roles and responsibilitie Engineer in hospital.	s of Biomedical				
	 Demonstrate the knowledge about the functions of other Engineeri services in the hospital. 	ing and auxiliary				
	Apply environment and waste management concepts in healthca	re industry.				

Syllabus: Same as that of BMC801 Hospital Management (HM).

List of Experiments and Assignments: (Any Four Experiments and Any Four Assignments)

- 1. Design of Registration form of hospital.
- 2. Prepare an organization chart for multi-speciality hospital
- 3. Prepare budget using EXCEL sheet for purchase of hospital equipment.
- **4.** Preparation of Comparative Statement in Excel for purchase of medical equipment. **(Any Two)**
- 5. Design the layout of Outpatient Department in hospital.
- 6. Design the layout of ICU in hospital.
- 7. Design the layout of Surgical Operation Theatre Complex in hospital.
- 8. Design the layout of Radiology Department in hospital.
- 9. Design the layout of Pathology Laboratory and Blood Bank Department in hospital.
- 10. Design the layout of Physiotherapy Department in hospital.
- 11. Design the layout of Central Sterile Supply Department in hospital.

Any other experiment based on syllabus which will help learner to understand topic/concept.Group

Presentation based on the assigned topic by visiting a hospital.

Books Recommended:

Text Books:

- 1. Hospital Management by Dr. Pradyna Pai,
- 2. Hospital Planning, Designing and Management: Kunders G D, Gopinath, A Katakam (Private PubBangalore)

Reference Books:

- 1. Computers in Medicine: R. D. Lele (TMH Pub)
- 2. Hospital Care and Hospital Management AICTE Journal Vol. 1,2,3 by Dr. Kalanidhi. (AICTE PubBangalore
- 3. Careers in Biomedical: Shantanu Thatte.

In Semester Assessment (ISA):

ISA shall consist of minimum 4 experiments, 4 assignments and presentation. The

The final certification and acceptance of ISA ensures the satisfactory performance of laboratory work and minimum passing in the term work.

Oral examination will be based on suggested practical list and entire syllabus.

Course	To make the learner aware of fundamental concepts of Robotics	1					
Objectives	To make learner study direct and Inverse Kinematics of Robots						
	To make learner know the Trajectory and Motion planning.						
	To make the learner know the Biomedical applications of robotics						
Course	To describe direct and inverse kinematics of robots.						
Outcomes	To describe workspace envelop and trajectory planning for robots						
	To apply various image processing tools for robotic manipulation						
	To implement motion planning solutions using various algorithms						
	To illustrate medical applications of robots						

Syllabus: Same as that of BMDO8011 Hospital Management (HM).

List of Experiments: (Any Seven)

Students can perform any other experiment/Mini project/ Seminar/ Scholarly paper reviewbased on the theory syllabus. The coding can be done in MATLAB/SCILAB/Python/C

- 1. Fundamental and Composite Rotations of Mobile frame with respect to fixed frame
- 2. Homogeneous Transformations and Screw Transformations
- 3. Kinematic configurations and Link Coordinate Transformations matrix(Arm Matrix)
- 4. Direct Kinematics of 2-3 axis Planar Robot and find the location of Tool tip.
- 5. Direct Kinematic Analysis of 4,5 Axis Robot
- 6. Inverse Kinematics of robots and prove that there are multiple ways to reach a particular point.
- 7. Develop Work Envelop for 2,3 axis Robot

- 8. To study segmentation using edge detection technique
- 9. Straight line trajectory planning-BDA Algorithm
- 10. Template Matching
- 11. Gross motion planning is a part of task planning of robot. Suggest any method of gross motion planning so that the task can be completed without hitting obstacles
- 12. Presentation/ Seminar/Case study on Biomedical Application of robotics

In Semester Assessment(ISA):

ISA shall consist of minimum 4 experiments, 4 assignments and presentation. The

The final certification and acceptance of ISA ensures the satisfactory performance of laboratory work and minimum passing in the ISA.

Oral examination will be based on suggested practical list and entire syllabus.

Course objective	 Implement the concept of Project Stage-I Use advanced tools for Implementation Rectify/ Debug the design and Submit project report. 	
Course Outcome	 Learner will be able to Debug/ Rectify the design incurred during implementation Write Analysis, Results, Design in prescribed format Learn the behavioural science by working in a group 	

Project Guidelines:

- 1. The students have already under gone project assignment in their seventh semester and in this semester the students are expected to continue the project work of stage I and should attempt solution to the problem.
- 2. Learner is allotted 12 hrs per week for the project work
- 3. Report should be prepared as per the guidelines issued by the University of Mumbai
- 4. Learners should be motivated to publish a paper based on the work in Conferences/students competitions
- 5. Project Groups: Learners can form groups not more than 4 (Four)

Faculty Load:

- 1. In semester VIII 1 (One) periods of 1 hour each per week per project group
- 2. Each faculty is permitted to take (guide) maximum 4 (Four) project groups.

Department of Biomedical Engineering

In Semester Assessment(ISA):

The ISA should be examined by approved internal faculty appointed by the head of the institutebased on following:

- Scope and objective of the project work.
- Extensive Literature survey.
- Progress of the work (Continuous assessment)
- Report in prescribed University format.

Guidelines for Assessment of Project Stage-II

- 1. Project II should be assessed through a presentation jointly by Internal and External Examiners approved by the University of Mumbai
- 2. Project stage II should be assessed based on following points
 - Quality of problem selected
 - Clarity of Problem definition and Feasibility of problem solution
 - Relevance to the specialization / Industrial trends
 - Clarity of objective and scope
 - Quality of work attempted
 - Validation of results
 - Compilation of Project Report
 - Quality of Written and Oral Presentation
