

Vidyankar Institute of Technology

An Autonomous Institute affiliated to University of Mumbai

Bachelor of Technology

in

Electronics and Computer Science

Third Year Scheme & Syllabus

(As per AICTE guidelines, with effect from the Academic Year 2022-23)

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated, and taken forward in a systematic manner. Therefore, autonomy for Vidyalankar Institute of Technology is not merely a transition from pre-cooked syllabi to self-designed curriculum. Autonomy curriculum of the Institute offers required academic flexibility with emphasis on industry requirements and market trends, employability and problem-solving approach which leads to improving competency level of learners with diverse strengths. In line with this, the curriculum framework designed is **Choice Based Credit and Grading System (CBCGS)**. The number of credits for each category of courses learnt by learners, internships and projects is finalized considering the scope of study and the ability that a learner should gain through the Programme. The overall credits and approach of curriculum proposed is in line with AICTE model curriculum.

The curriculum comprises courses from various categories like basic sciences, humanities and social sciences, engineering sciences, general education and branch specific courses including professional electives and open electives. The curriculum has core courses of branch of engineering positioned and sequenced to achieve sequential and integral learning of the entire breadth of the specific branch. These courses are completed by third year of the engineering Programme that enables learners to prepare for higher education during their final year. Professional elective courses, that begin from third year of Programme, offer flexibility and diversity to learners to choose specialization from a basket of recent developments in their field of technology. The selection of unique professional elective courses based on industrial requirements and organizing them into tracks is a salient feature of this curricula ensuring employability. Open Elective courses cover multi-disciplinary, special skill development, project management and similar knowledge that make learners capable to work in industrial environment.

For holistic development of learners, apart from technical courses, Humanities and Social Science courses develop the required soft-skills and attitude amongst learners. Our curriculum also introduces Social Service Internship and Internship with institutes abroad along with courses like Design Thinking, Wellness – Body, Mind & Spirit, Indian Traditional Knowledge system under General Education category. These general education courses aim to create balance in brain hemispheres and hence improve learners' clarity in thoughts and responses.

Additionally, curriculum provides add-on Honours/Minor degree that involves field/ domain study. Learner can avail this degree by completing requirement of additional 15 credits.

Thus, the academic plan of VIT envisages a shift from summative to formative and competency-based learning system which will enhance learner's ability towards higher education, employability, and entrepreneurship.

Chairman, Board of Studies

Detailed Syllabus of Third Year Semester - V

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Presentation Skills

Course Code: HS04

Category: Humanities and Social Sciences

Preamble:

The course, Presentation Skills, is intended to equip students with the necessary skill set to help them bridge the gap from the campus to the corporate world. It will help them to be industry ready in sync with the requirements of the program they are pursuing.

Pre-requisites:

Nil

Course Objectives:

- To help students to bridge the gap between the campus and the corporate world.
- To help students to be industry ready by equipping them with the necessary soft skill set.

Course Outcomes:

Student will be able to:

CO 1: Deliver Corporate Presentations, Storyboards, and Business Plan.

CO 2: Participate in campus placements.

CO3: Build a personal brand and establish their presence as a global citizen.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
-	2	-	1

Assessment Guidelines:

Head of Learning	ISA	MSE	ESE	Total
Practical	50	-	-	50

ISA:

25 Marks = 10 Marks for assignments + 15 Marks for Presentations

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Personal Branding	Introduction to Personal Branding –Purpose, Significance, Benefits and Techniques to build a personal brand Corporate/Organizational Branding Online identity of Brand on social media Maintenance and Improvement of your Brand Factors affecting your Brand	4
2	Corporate Presentations	Business Presentation Tips Digital Presentations PAIBOC Model and Minto Pyramid Principles	4
3	Business Plan Presentations	Introduction to Business Plans Company Overview & Industry Analysis Persuasive Communication in Marketing Strategy Operations Strategy in Financial Management Implementation Plan	4
4	Storyboarding and Storytelling	Visual Story Telling Video Presentations Story Structure with images Film and Animation	4
5	Placement Readiness	Mock HR Interviews Mock GDs Aptitude Tests Placement ready resume	4
6	Global Communication	An introduction to inter-cultural communication Introduction to languages and cultures Global media in mass communication Tips to become a global citizen Respecting cultural diversity	4
Total			24

Suggested List of Practicals:

1. Personal Branding
2. Personal Branding
3. Corporate Presentations
4. Corporate Presentations
5. Business Plan Presentations
6. Business Plan Presentations
7. Storyboarding and Storytelling
8. Storyboarding and Storytelling
9. Placement Readiness

3. Robbins Stephens, "Organizational Behaviour,", Education.
4. Kitty O Locker, "Business Communication- Building Critical Skills", McGraw Hill.

Course Name: Engineering Mathematics-V

Course Code: BS12

Category: Basic Sciences

Preamble:

This course introduces students to various optimization techniques & discrete structures concepts that are helpful for understanding many fundamental topics in Electronics & computer science fields.

Students will learn how to maximize or minimize both the linear programming problems and Non-linear programming problems by using different optimization techniques.

The course is designed for students with a solid understanding of mathematical programming, discrete structures, and error detection functions. By the end of the course, students will have a deep understanding of optimization techniques to optimize objective's function and will be equipped with the various advanced mathematical tools and techniques which are necessary to solve wide range of computational problems.

Pre-requisites:

Engineering Mathematics-III & IV

Course Objectives:

- Understand the reduction of Quadratic form to a canonical form and compute its rank with interpretation of its significances.
- Understand the various optimization techniques to optimize Linear Programming Problems and significances.
- Understand the optimization techniques for Non-Linear Programming Problems.
- Apply various techniques of Operation research to solve transportation, game theory and assignment problems.
- Understand the algebraic structures with binary operation and cyclic group for solving coding and decoding techniques in computational problems.
- To understand the coding and decoding mathematical techniques for Error Detections and Corrections in data science, machine learning and other fields that require strong analytical and problem-solving abilities.

Course Outcomes:

Learner will be able to:

CO1: Apply the knowledge to transform Quadratic form to a canonical to find its rank, index, and signature.

CO2: Apply various optimization techniques to optimize Linear Programming Problems and their significances.

CO3: Apply the optimization techniques for Non-Linear Programming Problems with or without constraints.

CO4: Apply the techniques of Operation research to optimize the transportation, game theory and assignment problems.

CO5: Understand the knowledge of algebraic structures with binary operation and cyclic group for coding

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

and decoding techniques in computational problems.

CO6: Apply the knowledge of coding and decoding techniques for Error detections and corrections in data science, machine learning and other fields that require strong analytical and problem-solving abilities.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Tutorial	Theory	Practical/Tutorial
2	1	2	1

Assessment Guidelines:

Head of Learning	ISA (20)		MSE	ESE	Total
	Tutorials	Class presence & Participation			
Theory	10	10	30	50	100

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Linear Algebra: Advance theory of Matrix-Quadratic Forms	1.1 Quadratic forms over real field, Linear Transformation of Quadratic form. 1.2 Rank, Index and Signature of quadratic form, Value-class of a quadratic form. 1.3 Reduction of Quadratic form to a canonical form using congruent transformations. 1.4 Reduction of Quadratic form to a canonical form using Orthogonal transformations Self-learning Topics: Singular Value Decomposition method (SVD), Similarity of matrices, Diagonalizable and Non-diagonalizable matrices. Application of Matrix Theory in machine learning and Google page rank algorithms, functions of matrix,	7
2	Linear programming problems (LPP)	2.1 Standard form of LLP 2.2 Simplex method to optimize objective function. 2.3 Artificial variables, Big-M method (Method of penalty). 2.4 Duality form and Dual of LPP 2.5 Dual Simplex Method to optimize objective function. Self-learning Topics: linear programming problems from mathematical form into Optimization Toolbox solver syntax using the problem-based approach through MATLAB.	8

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

3	Non-Linear programming problems (NLPP)	<p>3.1 NLPP without constraints using Hessian Matrix. 3.2 NLPP with one equality constraint (two or three variables) using Lagrange's multipliers method. 3.3 NLPP with two equality constraints with Lagrange's multipliers method. 3.4 NLPP with one & two inequality constraint using Karush Kuhn-Tucker (KKT) conditions.</p> <p>Self-learning Topics: One-dimensional search method (Golden Search method, Newton's method). Gradient Search method and using NLPP's the problem-based approach through MATLAB.</p>	7
4	Operations Research (OR)	<p>4.1 Transportation problems: 4.1.1. North-West corner method 4.1.2. Least cost method 4.1.3. Vogel's Approximation Method or Unit cost penalty method 4.2 Game Theory: Zero sum problems only. 4.3 Assignment problems</p> <p>Self-learning Topics: Network models, Inventory models, mixed strategy Nash Equilibrium, Cooperative and Non-cooperative game theory.</p>	7
5	Linear Algebra: Algebraic structures	<p>5.1 Algebraic structures with one binary operation 5.2 Groupoid- Closure Axiom property, 5.3 Semigroup- Groupoid with Associative Property 5.4 Monoid- Semigroup with identity element property 5.5 Group- Monoid with Inverse Element Property 5.6 Abelian Group- Commutative Group 5.7 Cyclic groups- Group with Generator Element 5.8 Order and subgroups.</p> <p>Self-learning Topics: Group Homomorphism, Isomorphism and Automorphism for coding theory.</p>	8
6	Coding and Decoding theory	<p>6.1 Definition of encoding function, weight, Hamming Distance, Error Detection and Correction. 6.2 Group codes with Composition Tables. 6.3 Minimum distance, Boolean matrix. 6.4 Parity Check Matrix to Encoding Function Generation 6.5 Maximum Like hood Decoding Technique to Decode given code using Encoding Function.</p> <p>Self-learning Topics: Standard coding schemes such as block and convolutional codes, coding schemes such as Turbo and LDPC codes, and space time codes applied in digital communication systems as well as storage media.</p>	8
Total			45

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Basic VLSI Design

Course Code: EC10T

Category: Core.

Preamble:

Digital VLSI Design is the art and science of integrating millions to billions of transistors on a single chip to create powerful, compact, and energy-efficient digital circuits. At the heart of this discipline is the mastery of digital logic, enabling the creation of microprocessors, memory units, and diverse integrated circuits that underpin modern computing devices. The landscape of Digital VLSI Design is marked by a delicate balance between intricate circuitry and the imperative to minimize physical footprint. It plays a pivotal role not only in traditional computing but also in propelling innovations in emerging fields like artificial intelligence, machine learning, and the Internet of Things. This course provides an overview of the techniques and challenges such as shrinking transistor sizes, noise resilience, and power optimization.

Pre-requisite:

- Digital Electronics
- Electronic Devices and Circuits
- Computer Organization and Architecture

Course Objectives:

- To understand VLSI Design flow and technology trends.
- To realize MOS based circuits using different design styles.
- To study semiconductor memories using MOS logic.
- To study adder, multiplier, and shifter circuits for realizing data path design.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Demonstrate a clear understanding of VLSI Design flow, technology trends, scaling and MOSFET models.

CO2: Design and analyze MOS based inverters.

CO3: Apply design styles for realization of Combinational and Sequential Circuits.

CO4: Understand various semiconductor memories using MOS logic.

CO5: Design adder, multiplier and shifter circuits using MOS logic.

Course Scheme:

Electronics and Computer Science

methodology based on the nature of the course. Faculty may propose the revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Unit No.	Contents	Hrs.
1		MOS Physics and MOSFET Scaling	05
	1.1	MOS structure and MOS Capacitance, Region of Operation of MOS (Accumulation, Depletion, and Inversion), Threshold Voltage, Effect of Body Bias	
	1.2	Region of operation of MOSFETS, Drain Current Equation of MOSFET, Parasitic capacitances in MOSFET	
	1.3	MOSFET Scaling: Constant Voltage and Constant Field, Effect of Scaling on Device parameters. Short Channel Effect: Channel Length Modulation, sub-threshold conduction, hot electron effect and velocity saturation.	
2		MOSFET Inverters	07
	2.1	Introduction to MOS inverters: Active and passive load nMOS inverters, CMOS inverter and their comparison.	
	2.2	Static & Dynamic Analysis of Resistive load and CMOS Inverter: Calculation of critical voltages, noise margins, rise time, fall time, propagation delay and power dissipation. Design of CMOS inverter.	
3		Combinational and Sequential Circuit Realization	07
	3.1	Static CMOS, Analysis and design of 2-I/P NAND, 2-I/P NOR and complex Boolean function realization using equivalent CMOS inverter for simultaneous switching	
	3.2	Basic gates and MUX realization using pass transistor and transmission gate logic Pseudo NMOS design styles, C^2 MOS, Dynamic, Domino, NORA and Zipper CMOS design styles.	
	3.3	SR Latch, JK FF, D FF, 1 Bit Shift Register realization using CMOS logic	
4		Semiconductor Memories	06
	4.1	SRAM: 6T SRAM operation, design strategy, read/write circuits, sense amplifier	
	4.2	DRAM: 1T & 3T DRAM, operation modes, leakage currents, refresh operation, physical design.	
	4.3	ROM Array: NAND and NOR based ROM array	
	4.4	Non-volatile read/write memories: Programming techniques for flash memory, Introduction to advances in non-volatile memories: MRAM, ReRAM	
5		Data Path Design	05
	5.1	Adder: Ripple Carry Adder, Carry Look Ahead (CLA) adder, Carry Generation circuit using MODL, Manchester carry chain. High-speed adders: carry skip, carry select, and carry save	
	5.2	Multipliers and shifter: Array multiplier and barrel shifter	
		Total	30

Suggested list of Practicals:

Practical No.	Module No.	Suggested list of Experiments	Topics to be highlighted	CO Map
1	1	To observe the effect of scaling on the characteristics of various MOSFET's	See the effect of Constant voltage and constant field Scaling	CO1
2	2	Design and Simulation to Symmetric and Non-Symmetric CMOS Inverter	How to control the inverter threshold	CO2
3	2	Comparison of different inverters based on Critical Parameter, timing parameters and Noise margins	Comparison of various types of inverters	CO2
4	2	Design and Implementation of Equivalent inverter for any CMOS logic function.	Concept of Equivalent inverter and relevance to timing analysis	CO2
5	3	Comparison of Pseudo NMOS and CMOS Logic functions.	Pseudo NMOS Logics	CO3
6	3	Comparison of dynamic and CMOS logic functions	Dynamic Logics	CO3
7	3	Comparison of domino and CMOS logic functions	Implementation of Uncomplemented functions	CO3
8	3	Implementation of functions using NORA and Zipper CMOS	Zipper CMOS	CO3
9	3	Implementation of Logic functions using NMOS, PMOS and Pass transistor logic	Change in voltage levels while passing a logic value	CO3
10	3	Implementation of 8:1 Mux and 1:8 Demux using NMOS, PMOS and transmission gates.	MUX and DEMUX operation using Pass transistor logic	CO3
11	4	Implementation of SRAM Cell	Read, Write and Hold operations in a DRAM	CO5
12	4	Design of NOR based and NAND Based ROM	Concept of Non-Volatile Memory	CO4
13	5	Implementation of 4-bit adder Ripple Carry Adder	Delay introduced while adding many bits	CO5
14	5	Implementation of 4- bit Carry look ahead adder with carry generation circuit using MODL	Reduction of delay during adding two binary numbers	CO5
15	5	Design of 4 x 4 Barrel shifter using NMOS transistors	Data Steering, rotate left and rotate right operations	CO5
16	1,2,3,4,5	Simulation of Complete Digital Design Flow in Cadence	Digital Design Flow using Cadence	CO1,2,3,4,5
17	1,2,3,4,5	Simulation of Complete Analog Design Flow in Cadence	Analog Design Flow using Cadence.	CO1,2,3,4,5

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Microcontroller and Applications

Course Code: EC11T

Category: Core.

Preamble:

A professional in any field of computing should be able to appreciate the difference between Microprocessor and Microcontroller and should be able to understand the fundamental units of a Microcontroller. A knowledge of programming in assembly language as well as embedded C for microcontroller-based systems is a must. The course provides the in-depth knowledge of Microcontroller based systems and programming with it.

Pre-requisite:

Digital Electronics
Computer Organization and Architecture
Fundamental concepts of processing

Course Objectives:

- To introduce the learner to the basic difference between Microprocessor and Microcontroller and design Microcontroller based systems
- To introduce the learner to the concept of assembly language programming
- To introduce the learner to the concept of embedded C programming

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Understand fundamental concepts of microcontrollers

CO2: Explain different building blocks of microcontrollers

CO3: Apply the knowledge of instruction set of microcontroller to develop assembly language and embedded C programs

CO4: Analyze the performance of a microcontroller by interfacing different peripherals and writing simple applications

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Assessment Guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	15	20	40	075

The assessment/evaluation guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to decide her/his assessment methodology based on the nature of the course. Faculty may propose a revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	8051 Microcontroller Architecture	Introduction to the concepts of Microprocessors and Microcontrollers Overview of various available Microcontrollers Applications of Microcontrollers 8051 Architecture	4
2	8051 Internal Hardware	Memory organization Timers/Counters and programming Serial port and programming Interrupts and Interrupt control Power Saving modes	6
3	8051 Assembly language programming	Addressing modes of 8051 Instruction Set: Data transfer instructions, Arithmetic instructions, Logical instructions, Bit Processing, Branching instructions, Assembler directives	6
4	8051 programming in Embedded C	Embedded C-programming concepts: Data types, Modifiers, Qualifiers, Functions, Macros, Interrupt service routines Embedded C programming for 8051 (Timers/Counters, Serial port and Interrupts)	6
5	8051 Interfacing – Part 1	Display interfacing: 7-segment LED display, 16x2 generic alphanumeric LCD display Keyboard interfacing: 4x4 matrix keyboard	4
6	8051 Interfacing – Part 2	Analog devices interfacing: 8-bit ADC, 8-bit DAC, temperature sensor (LM35) Motor interfacing: Relay, DC motor (speed control using PWM), Stepper motor and Servo motor	4
Total			30

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Text Books:

1. M. A. Mazidi, J. C. Mazidi, Rolin, D. McKinlay, "The 8051 Microcontroller and Embedded Systems Using Assembly and C", Pearson Education, 2nd edition.

3. Ajay V Deshmukh, "Microcontroller Theory and Applications", Tata McGraw Hill, 2017, 3rd edition.

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Microcontroller and Applications Lab

Course Code: EC11P

Category: Core.

Preamble:

A professional in any field of computing should be able to appreciate the difference between Microprocessor and Microcontroller and should be able to understand the fundamental units of a Microcontroller. A knowledge of programming in assembly language as well as embedded C for microcontroller-based systems is a must. The course provides the in-depth knowledge of Microcontroller based systems and programming with it.

Pre-requisite:

Computer Organization and Architecture
Fundamentals of C programming

Course Objectives:

- To introduce learners with basic principles about microcontroller architecture, machine language, and low-level programming.
- To introduce learners with enough assembly language and embedded C to enhance their knowledge of today's most widely used microcomputer family.
- To Improving learners systems programming skills through programming exercises carried out by students.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Understand instruction set/format of a microcontroller.

CO2: Understand concept of assembly language and embedded C programming.

CO3: Develop assembly language and embedded C program for simple applications.

Course Scheme:

Assessment Guidelines:

Head of Learning	ISA	MSE	ESE	Total
Practical	25	-	25	50

The assessment/evaluation guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to decide her/his assessment methodology based on the nature of the course. Faculty may propose a revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Suggested List of Experiments

Sr No.	Suggested Experiments
1.	Develop assembly language code to add, subtract, multiply, divide, two, 8-bit numbers which will occupy minimum program memory space.
2.	Develop assembly language code to convert the input from keyboard to the format which can be used for processing internally.
3.	Given a bucket of ten, 8-bit numbers, develop assembly language code to find out smallest and largest element out of the bucket.
4.	Given an 8-bit numbers, develop assembly language code to check whether it is odd or even and to find out whether it has odd or even parity.
5.	It is required to glow the LED connected on P1.0 for some time and switch it OFF for the same time and repeat this for infinite time, develop the assembly code for the same.
6.	Develop assembly and C language code to display rolling pattern from left to right and right to left on the LEDs connected to PORT 1.
7.	Interface a 4 x 4 matrix type of keyboard with 8051. Develop assembly and C language code to detect the key closure.
8.	Interface a 4-phase stepper motor with 8051. Develop assembly and C language code to rotate the stepper motor clockwise for some time and anti-clockwise for the same time continuously.
9.	Interface a common cathode type of 7-segment display with 8051. Develop assembly and C language code to demonstrate Up/Down counting continuously.
10.	Interface 8-bit DAC, 0808 with 8051. Develop assembly and C language code to generate continuous rectangular wave with 1 kHz frequency and 40% duty cycle.

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Operating System

Course Code: EC12T

Category: Core

Preamble:

The goal of the course is to introduce the students to modern operating systems design. This course covers the design and implementation of operating systems with a focus on modern, concurrent kernels.

Pre-requisites:

Data Structure

Course Objectives:

- To enable learner to understand how operating system manages allocation and deallocation of different resources needed by user/ application.
- To enable learner to understand how operating system controls access to various resources and provides security.
- To enable learner to evaluate performance of different approaches used by operating systems, for effective resource utilization.

Course Outcomes:

Learner will be able to:

CO1: Understand the benefits of software modularity and how it applies to OS design.

CO2: Compare various OS scheduling policies based on performance parameters.

CO3: Analyze methods to achieve synchronization and handle deadlocks.

CO4: Evaluate performance of Memory allocation and replacement policies.

CO5: Compare various files and I/O management techniques.

CO6: Understand how principles of general OS are applied in Linux OS.

Course Scheme:

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Operating System Lab

Course Code: EC12P

Category: Core

Preamble:

The course introduces learners to Linux shell commands and simulate various algorithms used by generalOS for managing resources. This courses project will explore the key operating system facilities in the relative isolation of an OS development framework with the goal of maximizing experiential learning.

Pre-requisites:

Data Structure Lab

Course Objectives:

- To enable learner to visualize the working of operating system by simulating techniques used by itto manage resources.
- To enable learner to apply techniques of process synchronization in multithreaded programs andhence develop concurrent applications.

Course Outcomes:

Learner will be able to:

CO1: Understand various shell commands of Linux OS.

CO2: Compare performance of different process scheduling policies.

CO3: Perform process/ thread synchronization for consistency and concurrency.CO4:

Simulate OS techniques for memory and virtual memory management.

CO5: Develop project to explore key OS facilities.

Course Name: Analysis of Algorithms

Course Code: EC13T

Category: Core

Preamble:

The course covers the fundamental principles and techniques used in designing and analyzing algorithms. Students will learn how to analyze the performance of algorithms, measure their efficiency, and compare different algorithms based on their time and space complexity. The course is designed for students with a solid understanding of programming and data structures. By the end of the course, students will have a deep understanding of the principles of algorithm design and analysis and will be equipped with the tools and techniques necessary to develop efficient algorithms for a wide range of computational problems.

Pre-requisites:

Engineering Mathematics-III – Sem 3

Data Structures – Sem 3

Course Objectives:

- To provide a deep understanding of algorithmic design and analysis techniques that enable the development of efficient and effective algorithms for solving computational problems.
- To develop a strong foundation in the theory of algorithms, including concepts such as time and space complexity, algorithmic paradigms, data structures, graph algorithms, sorting and searching, and dynamic programming.
- To equip students with the tools and techniques necessary to compare and evaluate the performance of different algorithms and choose the best algorithm for a given problem.

To provide students with the knowledge and skills required for a successful career in software development, data analysis, and other fields that require strong analytical and problem-solving abilities

Course Outcomes:

Learner will be able to:

CO1: Analyze the time and space complexity of algorithms.

CO2: Apply and Analyze Divide and Conquer strategy to solve given problems.

CO3: Apply and Analyze Greedy strategy to solve given problems.

CO3: Apply and Analyze Dynamic Programming strategy to solve given problems.

CO4: Apply and Analyze Backtracking, Branch and Bound strategy to find solution for the given problems.

CO5: Classify a problem as computationally tractable or intractable and discuss strategies to address intractability.

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Mini Project-I

Course Code: EC45

Category: Project and Internship

Preamble:

Students will be acquainted with the process of identifying the needs and converting it into the problem. Third year students will be familiarized with the process of solving the problem in a group and applying basic engineering fundamentals to attempt solutions to the problems. This will inculcate the process of self-learning and research.

Pre-requisites:

All subjects they learned till TE and beyond.

Course Objectives:

1. To acquaint with the process of identifying the needs and converting it into the problem.
2. To familiarize the process of solving the problem in a group.
3. To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems.
4. To inculcate the process of self-learning and research.

Course Outcomes:

Learner will be able to:

CO1: Identify problems based on societal /research needs and apply Knowledge and skill to solve societal problems in a group.

CO2: Develop interpersonal skills to work as member of a group or leader and Excel in written and oral communication.

CO3: Draw the proper inferences from available results through theoretical/ experimental/simulations and analyze the impact of solutions in societal and environmental context for sustainable development

CO4: Use standard norms of engineering practices

CO5: Demonstrate capabilities of self-learning in a group, which leads to lifelong learning

CO6: Demonstrate project management principles during project work.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
-	4	-	2

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Practical	25	-	50	75

The assessment/evaluation guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall decide her/his assessment methodology based on the course's nature. Faculty may propose the revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Guidelines for Mini Project:

- Students shall form a group of 3 to 4 students, while forming a group shall not be allowed less than three or more than four students, as it is a group activity.
- Students should do survey and identify needs, which shall be converted into problem statement for mini project in consultation with faculty supervisor/head of department/internal committee of faculties.
- Students shall submit implementation plan in the form of Gantt/PERT/CPM chart, which will cover weekly activity of mini project.
- A log book to be prepared by each group, wherein group can record weekly work progress, guide/supervisor can verify and record notes/comments.
- Faculty supervisor may give inputs to students during mini project activity; however, focus shall be on self-learning.
- Students in a group shall understand problem effectively, propose multiple solution and select best possible solution in consultation with guide/ supervisor.
- Students shall convert the best solution into working model using various components of their domain areas and demonstrate.
- The solution to be validated with proper justification and report to be compiled in standard format of University of Mumbai.
- With the focus on the self-learning, innovation, addressing societal problems and entrepreneurship quality development within the students through the Mini Projects, it is preferable that a single project of appropriate level and quality to be carried out in two semesters by all the groups of the students. Mini Project 2 in semesters V and VI.
- However, based on the individual students or group capability, with the mentor's recommendations, if the proposed Mini Project adhering to the qualitative aspects mentioned above gets completed in odd semester, then that group can be allowed to work on the extension of the Mini Project with suitable improvements/modifications or a completely new project idea in even semester. This policy can be adopted on case by case basis.

Internal Assessment:

- The review/ progress monitoring committee shall be constituted by head of department. The progress of mini project to be evaluated on continuous basis, minimum two reviews during the semester.
 1. Review 1: First review shall be for finalization of problem and proposed solution
 2. Review 2: Second review shall be for implementation and testing of solution.

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

- In continuous assessment focus shall also be on each individual student, assessment based on individual's contribution in group activity, their understanding and response to questions.
- Distribution of internal assessment marks for minor project shall be as below:

1. Marks awarded by guide/supervisor based on log book: 10
2. Marks awarded by review committee: 10
3. Quality of Project report: 05

Minor Project shall be assessed based on following criteria:

1. Quality of survey/ need identification
2. Clarity of Problem definition based on need.
3. Innovativeness in solutions
4. Feasibility of proposed problem solutions and selection of best solution
5. Cost effectiveness and Societal impact
6. Full functioning of working model as per stated requirements
7. Effective use of skill sets
8. Effective use of standard engineering norms
9. Contribution of an individual's as member or leader
10. Clarity in written and oral communication In case of minor project-I all criteria in generic may be considered for evaluation of performance of students in mini project.

End semester examination assessment:

- Report should be prepared as per the guidelines issued by the department.
- Minor Project shall be assessed through a presentation and demonstration of working model by the student project group to a panel of Internal and External Examiners preferably from industry or research organizations having experience of more than five years approved by head of Institution.
- Students shall be motivated to publish a paper based on the work in Conferences/students competitions.

Detailed Syllabus of Third Year Semester - VI

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Digital Image Processing

Course Code: EC14T

Category: Core

Preamble:

Digital Image Processing introduces the fundamental concepts and general principles of image processing. It covers the key stages of digital image processing techniques. Students will also get an opportunity to implement the algorithms that are specific to real time image processing systems/applications.

Pre-requisites:

EC06-Signals & System

Course Objectives:

- Develop a solid foundation in the theoretical principles underlying digital image formation, representation, and enhancement.
- Gain proficiency in utilizing various image processing tools and algorithms to manipulate, analyze, and interpret digital images effectively.
- Learn to apply mathematical and computational techniques for filtering, segmentation, and feature extraction in digital image processing tasks.
- Explore advanced topics such as image restoration, image compression, and image recognition to address real-world challenges in diverse applications.

Course Outcomes:

Student will be able to:

CO1: Understand the fundamentals of Digital Image representation and simple pixel relations

CO2: Perform the basic image processing operation

CO3: Perform segmentation operation.

CO4: Perform Morphological operation

CO5: Understand different transform and enhancement in frequency domain

CO6: Apply compression and decompression techniques to different digital images

Course Name: Digital Image Processing

Course Code: EC14P

Category: Core

Preamble:

Digital Image Processing introduces the fundamental concepts and general principles of image processing. It covers the key stages of digital image processing techniques. Students will also get an opportunity to implement algorithms that are specific to real time image processing systems/applications.

Pre-requisites:

Signals & System

Course Objectives:

- Gain proficiency in using industry-standard software tools and programming languages for digital image processing, such as MATLAB, Python with libraries like OpenCV or scikit-image, or other relevant software.
- Learn to implement and experiment with various image processing algorithms and techniques, including but not limited to filtering, edge detection, image enhancement, and morphological operations.
- Develop skills in image analysis, interpretation, and visualization through practical exercises and projects involving real-world image datasets.
- Explore the impact of parameter selection, algorithm choice, and preprocessing techniques on the outcomes of digital image processing tasks.

Course Outcomes:

Upon successful completion of the Digital Image Processing Lab, students will be able to:

CO1: Implement fundamental image processing algorithms: Apply various image processing techniques, including filtering, edge detection, and morphological operations, using appropriate programming languages and software tools.

CO2: Analyze and interpret digital images: Develop the ability to analyze and interpret digital images, identifying features and patterns relevant to specific applications.

CO3: Evaluate the performance of image processing algorithms: Assess the effectiveness of different image processing algorithms by comparing their results and considering factors such as computational efficiency and accuracy.

CO4: Solve image processing problems: Apply critical thinking and problem-solving skills to address image processing challenges encountered in lab exercises and projects.

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
-	2	-	1

Assessment Scheme:

Head	ISA	MSA	ESA	Total
Practical	25	-	25	50

Suggested List of Practicals:

Sr No.	Suggested Experiment List
1.	Digital image conversion from RGB to gray, gray to binary
2.	Improve the quality of the 24-bit image by using Contrast stretching, Brightness, Log transformation
3.	Image enhancement using Histogram Equalization
4.	Sharpening and smoothing filters
5.	Fourier transforms on images
6.	Comparison of edge detection techniques
7.	Image compression using Bit plane slicing
8.	Image compression using DCT
9.	Morphological operations
10.	Segmentation using Background subtraction technique
11.	To analyze spatial and intensity resolution of images using MATLAB.

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Theory of Computer Science

Course Code: EC15T

Category: Core

Preamble:

This course introduces students to formal language and automata theory. It covers different types of grammars and automata of different powers that are required to recognize languages defined by the grammars.

Pre-requisites:

BS05 (Engineering Mathematics 3)

Course Objectives:

- Acquire conceptual understanding of fundamentals of grammars and languages.
- Build concepts of theoretical design of deterministic and non-deterministic finite automata and push down automata.
- Develop understanding of different types of Turing machines and applications.

Course Outcomes:

Learner will be able to:

CO1: Express rules in mathematical form (grammar).

CO2: Classify the problem into appropriate type of grammar.

CO3: Apply equivalence theory to recognize power of different automata.

CO4: Design Automata to meet the required specifications.

CO5: Create a tool that designs automata for a given grammar.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Tutorial	Theory	Tutorial
2	1	2	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory + Tutorial	40	20	40	100

The assessment/evaluation guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to decide her/his assessment methodology based on the nature of the course. Faculty may propose the revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Fundamentals of Automata Theory	Basic Mathematical Fundamentals: Set Theory, Logic, Relations and Functions.	4
2	Introduction to Language & Finite Automata	Concepts: Symbol, Alphabet, Language and Grammar. Types of Grammar and Automata. Deterministic: 5-tuple representation of DFA. Designing DFA for Regular Language. Minimization of DFA. Non-Deterministic: 5-tuple representation of NFA with epsilon moves and NFA without epsilon moves. Equivalence of language recognized by NFA and DFA.	6
3	Regular Language and Grammar	Regular Expression and Regular Grammar. Equivalence of FA and Regular Expression. Properties of Regular Sets/ Languages. Classifying language as Regular and Non-regular.	4
4	Context Free and Sensitive Languages	Concepts: CFG, CFL, Derivations and Ambiguity. CFL as a superset of Regular. Normal Forms (CNF and GNF). Properties of CFL.	6
5	Push-Down Automata	7-tuple Deterministic PDA. Deterministic and NonDeterministic PDA. Equivalence of NPDA and CFL.	4
6	Turing Machine	Basic 7-tuple Turing Machine (TM). TM as acceptor & generator. Recursive and RE Languages. Decidability & Undecidability.	6
Total			30

Suggestion for list of Tutorials:

1. At-least one tutorial on each module. Recommended to add additional tutorials for module 3, 5 and 7.
2. Questions should be short and conceptual only. Each tutorial should be designed worth 2 Marks. Required to be solvable in 5 to 10 mins.
3. Tutorial to have major questions mapping to level 1 of Blooms Taxonomy (Understanding) and few questions mapping to level 2 of Blooms Taxonomy (Applying).

Text Books:

1. John E. Hopcroft, Rajeev Motwani and Jeffrey D. Ullman. Introduction to Automata Theory, Languages and Computation. Pearson Education. 2008.
2. Michael Sipser. Introduction to the Theory of Computation. Thomson Course Technology. 2012.
3. Peter Linz. An Introduction to Formal Languages and Automata. Jones and Bartlett Student Edition. 2016.

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Computer Network

Course Code: EC16T

Category: Core

Preamble:

This course aims to give students an overview of the concepts and fundamentals of computer networks. It covers protocol layering, enabling students to analyze network performance. Additionally, the course provides insights into the functions of the OSI and TCP/IP models and various routing protocols.

Pre-requisites:

Digital Circuit Design
Digital Electronics
Electronic Devices and circuits

Course Objectives:

1. To introduce concepts and fundamentals of data communication and computer networks.
2. To explore the inter-working of various layers of OSI.
3. To explore the issues and challenges of protocols design while delving into TCP/IP protocol suite.
4. To assess the strengths and weaknesses of various routing algorithms.
5. To understand various transport layer and application layer protocols.

Course Outcomes:

Students will be able to:

1. Demonstrate the concepts of data communication and compare ISO - OSI model with TCP/IP model.
2. Explore different design issues at data link layer.
3. Design the network using IP addressing and subnetting / super netting schemes.
4. Analyze various routing algorithms and protocols at network layer.
5. Analyze transport layer protocols and congestion control algorithms.
6. Explore protocols at application layer.

Course Scheme:

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Course Name: Computer Networks Lab

Course Code: EC16P

Category: Core

Preamble:

This course is to provide students with an overview of the concepts and fundamentals of computer networks.

Pre-requisites:

Digital Circuit Design Lab

Digital Electronics Lab

Course Objectives:

1. To practically explore OSI layers and understand the usage of simulation tools.
2. To analyze, specify and design the topological and routing strategies for an IP based networking infrastructure.
3. To identify the various issues of a packet transfer from source to destination, and how they are resolved by the various existing protocols.

Course Outcomes:

Learner will be able to:

CO1: Execute and evaluate network administration commands and demonstrate their use in different network scenario

CO2: Demonstrate the installation and configuration of network simulator.

CO3: Demonstrate and measure different network scenarios and their performance behavior.

CO4: Implement the socket programming for client server architecture.

CO5: Analyze the traffic flow of different protocols

CO6: Design a network for an organization using a network design tool

Course Scheme:

Course Name: Analog & Digital Communications

Course Code: EC17T

Category: Core

Preamble:

In this course students will learn the fundamental principles and techniques behind the transmission of analog & digital signals. Through a blend of theoretical concepts and practical applications, students will explore the evolution from traditional analog to modern digital communication systems. Topics include modulation, coding, multiplexing, noise analysis, and coding. Emphasis will be placed on understanding signal propagation, channel capacity, and the impact of noise on communication quality. By the end, students will possess a solid foundation in both analog and digital communication principles, preparing them for diverse real-world challenges in the field.

Pre-requisites:

- BS06 (Engineering Mathematics-III)
- BS08 (Engineering Mathematics-IV)
- EC06 (Signals and Systems-IV)

Course Objectives:

- To understand the fundamental concepts and methods employed in analog and digital communications.
- To learn different modulation techniques used in analog and digital, and how they're applied in communication systems.
- To explore baseband and bandpass communication methods, as well as various coding techniques used in data transmission.
- To analyze the effect of noise in communication systems and learn about different multiplexing techniques utilized in transmitting multiple signals over a single channel.

Course Outcomes:

Learner will be able to:

CO1: Understand the fundamental principles and components of communication systems.

CO2: Apply knowledge of basic analog communication systems.

CO3: Evaluate the effects of noise on communication systems.

CO4: Interpret the principles governing digital communication systems.

CO5: Create and execute error control coding schemes to enhance communication reliability.

CO6: Investigate the practical applications of multi-user radio communication through case studies and applications.

Guidelines for Professional Elective Courses and Specialization Certificate

Professional Elective courses are designed to meet industrial requirements. All learners must opt for 6 professional elective courses (both Theory and Practical component) as a part of the requirement for B.Tech. Degree.

Specialization Certificate is introduced in order to build competency of learners in the chosen domain. Department of Computer Engineering offers the following specialization tracks:

1. Artificial Intelligence and Machine Learning (AIML)
2. Data Analytics (DA)
3. Internet of Things (IoT)
4. VLSI Design (VLSID)

Learners can take courses from any track. **However, if learners complete all Professional Elective courses from the same chosen track, they will be eligible to receive a Specialization Certificate from the Institute.**

Learners who choose professional elective courses from different specialization tracks will not be eligible for a Specialization Certificate.

It should be noted that there are no additional credit requirements for these specializations.

AIML track: Courses to be chosen for specialization in Artificial Intelligence and Machine Learning

Semester	Course Code	Course Name
V	EC21T	Artificial Intelligence
V	EC21P	Artificial Intelligence Lab
VI	EC25T	Soft Computing
VI	EC25P	Soft Computing Lab
VI	EC29T	Machine Learning
VI	EC29P	Machine Learning Lab
VII	EC33T	Data Analytics & Visualization
VII	EC33P	Data Analytics & Visualization Lab

VII	EC35P	IoT and Edge Computing Lab
VII	EC39T	IoT Security and Trust
VII	EC39P	IoT Security and Trust Lab
VII	EC42T	Industrial IOT
VII	EC42P	Industrial IOT Lab

VLSI track: Courses to be chosen for specialization in Very Large-Scale Integration

Semester	Course Code	Course Name
V	EC24	Digital System Design
V	EC24	Digital System Design Lab
VI	EC28	Advanced VLSI Design and Technology
VI	EC28	Advanced VLSI Design and Technology Lab
VI	EC32	Analog IC Design
VI	EC32	Analog IC Design Lab
VII	EC36	ASIC and Verification
VII	EC36	ASIC and Verification Lab
VII	EC40	System on Chip
VII	EC40	System on Chip Lab
VII	EC43	Mixed Signal VLSI
VII	EC43	Mixed Signal VLSI Lab

Appendix-B

Guidelines for Award of Honours/ Minor Degree Programme

Honours and Minor Degree programme is introduced in order to facilitate learners to enhance the depth of knowledge, diversity, breadth and skills in emerging fields. An Honours or Minor Degree typically refers to a higher level of academic achievement either for research orientation or for improving employability. Learners can select any Honours or Minor Degree programme as per his/her choice.

In our curriculum, learners can choose to avail Honours/ Minor Degree programme by completing requirements of 18 credits, which will be over and above the minimum credits required for B.Tech. degree i.e. credit requirement for the award of degree programme and Honours/ Minor degree programme are required to be explicitly carried out. Learners shall opt for Honours or Minor specialisations during the break of Semester 5 and Semester 6. **Learners may complete the B.Tech. degree programme without opting for Honours or Minor degree programme** i.e. opting for Honours/ Minor Degree programme is not mandatory as a part of B.Tech. degree programme

For Honours Degree, learner shall select Honours programme offered by his/her own department. Alternatively, for Minor Degree, learner shall select one of the two programmes offered by INFT department.

Eligibility Criteria

- All students are eligible to apply for Honours/ Minor degree programmes.
- If student has already completed any course(s) that is listed in the chosen Honours/ Minor degree programme, as additional learning course(s), then the transfer credits for such course(s) can be carried out towards Honours/ Minor degree programme.
- For a student to get Honours/ Minor degree, it is mandatory that the student completes the relevant courses before graduating.

VII	EC58T	Game Architecture and Programming
VII	EC58P	Game Architecture and Programming Lab
VIII	EC62T	Augmented and Virtual Reality
VIII	EC62P	Augmented and Virtual Reality Lab

2. Data Analytics

Semester	Course Code	Course Name
VI	EC55T	Data Visualization Using R-Programming
VI	EC55P	Data Visualization Using R-Programming Lab
VII	EC59T	Deep Learning
VII	EC59P	Deep Learning Lab
VIII	EC63T	Adaptive Business Intelligence Systems
VIII	EC63P	Adaptive Business Intelligence Systems Lab

3. Advance IOT

Semester	Course Code	Course Name
VI	EC56T	Embedded Linux System
VI	EC56P	Embedded Linux System Lab
VII	EC60T	IOT & Data Analytics
VII	EC60P	IOT & Data Analytics Lab
VIII	EC64T	IOT Applications & Web Development
VIII	EC64P	IOT Applications & Web Development Lab

Programme Scheme & Syllabus (R-2022) for Third Year Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Courses to be successfully completed as a part of Minor Degree Programme

1. UI/UX

Semester	Course Code	Course Name
VI	XXXX	Foundation of UI/UX
VII	XXXX	Design & Evaluation
VIII	XXXX	Applied UI/UX with Capstone Project

2. Blockchain

Semester	Course Code	Course Name
VI	XXXX	Blockchain Technology
VII	XXXX	Smart Contract & Crypto Currencies
VIII	XXXX	Decentralize & Blockchain Technologies

(Draft copy of Programme Scheme and Syllabus (R-2022), Subject to approval of Academic Council, Vidyalankar Institute of Technology)
