

Vidyalkar Institute of Technology

An Autonomous Institute affiliated to University of Mumbai

Bachelor of Technology in Electronics and Computer Science

Final Year Scheme & Syllabus (R 2023)

(As per AICTE guidelines, with effect from the Academic Year 2023-24)

Preamble

To meet the challenge of ensuring excellence in engineering education, the issue of quality needs to be addressed, debated, and taken forward in a systematic manner. Therefore, autonomy for Vidyalankar Institute of Technology is not merely a transition from pre-cooked syllabi to self-designed curriculum. The autonomous curriculum of the Institute offers required academic flexibility with emphasis on industry requirements and market trends, employability and problem-solving approach which leads to improving competency level of learners with diverse strengths. In line with this, the curriculum framework designed is **Choice Based Credit and Grading System (CBCGS)**. The number of credits for each category of courses learnt by learners, internships and projects is finalized considering the scope of study and the ability that a learner should gain through the programme. The overall credits and approach of curriculum proposed is in line with AICTE model curriculum.

The curriculum comprises courses from various categories like basic sciences, humanities and social sciences, engineering sciences, general education and branch specific courses including professional electives and open electives. The curriculum has core courses of branch of engineering positioned and sequenced to achieve sequential and integral learning of the entire breadth of the specific branch. These courses are completed by the third year of the engineering programme that enables learners to prepare for higher education during their final year. Professional elective courses, that begin from third year of programme, offer flexibility and diversity to learners to choose specialization from a basket of recent developments in their field of technology. The selection of unique professional elective courses based on industrial requirements and organizing them into tracks is a salient feature of this curricula ensuring employability. Open Elective courses cover multi-disciplinary, special skill development, project management and similar knowledge that make learners capable of working in an industrial environment.

For holistic development of learners, apart from technical courses, Humanities and Social Science courses develop the required soft-skills and attitude amongst learners. Our curriculum also introduces Social Service Internship and Internship with institutes abroad along with courses like Design Thinking, Wellness – Body, Mind & Spirit, Indian Traditional Knowledge system under General Education category. These general education courses aim to create balance in brain hemispheres and hence improve learners' clarity in thoughts and responses.

Additionally, curriculum provides add-on Honours/Minor degree that involves field/ domain study. Learners can avail themselves of this degree by completing the requirement of additional 18 credits.

Thus, the academic plan of VIT envisages a shift from summative to formative and competency-based learning system which will enhance learner's ability towards higher education, employability and entrepreneurship.

Detailed Syllabus of Final Year (Semester – VII & VIII)

Course Name: Digital Image Processing

Course Code: PCEC15T

Category: Programme Core Course

Preamble:

Digital Image Processing introduces the fundamental concepts and general principles of image processing. It covers the key stages of digital image processing techniques. Students will also get an opportunity to implement algorithms that are specific to real time image processing systems/applications.

Pre-requisites:

PCEC06-Signals & System

Course Objectives:

- Develop a solid foundation in the theoretical principles underlying digital image formation, representation, and enhancement.
- Gain proficiency in utilizing various image processing tools and algorithms to manipulate, analyze, and interpret digital images effectively.
- Learn to apply mathematical and computational techniques for filtering, segmentation, and feature extraction in digital image processing tasks.
- Explore advanced topics such as image restoration, image compression, and image recognition to address real-world challenges in diverse applications.

Course Outcomes:

Students will be able to:

CO1: Understand the fundamentals of Digital Image representation and simple pixel relations

CO2: Perform the basic image processing operation

CO3: Perform segmentation operation.

CO4: Perform Morphological operation

CO5: Understand different transform and enhancements in frequency domain

CO6: Apply compression and decompression techniques to different digital images

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
2	-	2	-

Assessment Guidelines:

Head	ISA	MSA	ESA	Total
Theory	15	20	40	75

Detailed Syllabus:

Module no	Module name	Content	No of Hours
1	Digital Image Processing Fundamentals:	Background, Representation of a Digital Image, Fundamental Steps in Image Processing, Elements of a Digital Image Processing System Elements of Visual Perception, A Simple Image Model, Two-dimensional Sampling and Quantization, Tonal and Spatial Resolutions, Some Basic Relationships between Pixels, Image File Formats: BMP, TIFF and JPEG. Color Models (RGB, HSI, YUV)	4
2	Image Enhancement in Spatial Domain	Enhancement in the spatial domain: Some Simple Intensity Transformations, Histogram Processing, Image Subtraction, Image Averaging Spatial domain filters: Smoothing Filters, Sharpening Filters, High boost filter	6
3	Image Segmentation and Representation	Detection of Discontinuities, Edge Linking using Hough Transform, Thresholding, Region based Segmentation, Split and Merge Technique. Image Representation and Description, Chain Code, Polygonal Representation, Shape Number, Two Dimensional Moments.	4
4	Binary Image Processing	Binary Morphological Operators, Dilation and Erosion, Opening and Closing, Hit-or-Miss Transformation, Boundary Extraction, Region Filling, Thinning and Thickening, Medial Axis Transform, Connected Component Labeling	4
5	Image Transforms and frequency domain processing:	Introduction to 2-Dimensional Fourier Transform, Discrete Fourier Transform, Properties of the Two-Dimensional Fourier Transform, Fast Fourier Transform (FFT), Computation of 2 DFFT. Discrete Hadamard Transform (DHT), Fast Hadamard Transform (FHT), Discrete Cosine Transform (DCT), Introduction to Discrete Wavelet Transform (DWT)	6
6	Image Compression	Fundamentals: Coding Redundancy, Interpixel Redundancy, Psycho visual, Redundancy, Image Compression Models: The Source Encoder and Decoder, Lossless, Compression Techniques: Run Length Coding, Arithmetic Coding, Huffman Coding, Differential PCM, Lossy Compression Techniques: Predictive Coding, Delta modulation, Improved Gray Scale Quantization,	6

		Transform Coding, JPEG, MPEG-1., Fidelity Criteria.

Course Name: Digital Image Processing Lab

Course Code: PCEC15P

Category: Programme Core Course

Preamble:

Digital Image Processing introduces the fundamental concepts and general principles of image processing. It covers the key stages of digital image processing techniques. Students will also get an opportunity to implement algorithms that are specific to real time image processing systems/applications.

Pre-requisites:

PCEC06 - Signals & System

Course Objectives:

- Gain proficiency in using industry-standard software tools and programming languages for digital image processing, such as MATLAB, Python with libraries like OpenCV or scikit-image, or other relevant software.
- Learn to implement and experiment with various image processing algorithms and techniques, including but not limited to filtering, edge detection, image enhancement, and morphological operations.
- Develop skills in image analysis, interpretation, and visualization through practical exercises and projects involving real-world image datasets.
- Explore the impact of parameter selection, algorithm choice, and preprocessing techniques on the outcomes of digital image processing tasks.

Course Outcomes:

Upon successful completion of the Digital Image Processing Lab, students will be able to:

CO1: Implement fundamental image processing algorithms: Apply various image processing techniques, including filtering, edge detection, and morphological operations, using appropriate programming languages and software tools.

CO2: Analyze and interpret digital images: Develop the ability to analyze and interpret digital images, identifying features and patterns relevant to specific applications.

CO3: Evaluate the performance of image processing algorithms: Assess the effectiveness of different image processing algorithms by comparing their results and considering factors such as computational efficiency and accuracy.

CO4: Solve image processing problems: Apply critical thinking and problem-solving skills to address image processing challenges encountered in lab exercises and projects.

Course Name: Data Analytics & Visualization

Course Code: PEEC13T

Category: Programme Elective Course

Preamble:

Data Analytics and Visualization form the backbone of modern data-driven decision-making. This course equips students with skills to process, analyze, and visualize complex datasets using cutting-edge tools and techniques. Applications span business intelligence, healthcare, finance, and social media, emphasizing ethical data practices and real-world problem-solving.

Pre-requisites:

1. Basic Programming (Python/R)
2. Introductory Statistics
3. Fundamentals of Machine Learning

Course Objectives:

After completing this course, students will be able to:

Understand core concepts of data analytics and visualization.
Apply tools like Python (Pandas, Matplotlib), R (tidyverse), Tableau, and Power BI.
Design advanced visualizations (geospatial, interactive dashboards).
Analyze big data using Hadoop/Spark and NoSQL databases.
Evaluate statistical and ML models for actionable insights.

Course Outcomes:

Learner will be able to :

- CO1: Explain data analytics lifecycle and visualization principles.
CO2: Perform EDA and data preprocessing using Python/R/SQL.
CO3: Develop interactive dashboards with Tableau/Power BI.
CO4: Implement big data analytics using Hadoop/Spark.
CO5: Create end-to-end projects with storytelling techniques.

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Fundamentals	• Introduction to Data Analytics: Definition, significance in modern industries, and real-world applications across domains like business, healthcare, and social sciences. • Types of Data Analytics • Descriptive Analytics: Summarizing historical data (e.g., sales trends, customer demographics). • Predictive Analytics: Forecasting future outcomes using statistical models and ML (e.g., demand prediction, risk assessment). • Ethics and Privacy: Data governance, GDPR compliance, bias mitigation, and ethical implications of data misuse. •	4
2	Big Data Analytics	• Big Data Fundamentals: 4 Vs: Volume (scalability), Velocity (streaming data), Variety (structured/unstructured), Veracity (data quality). • Tools and Frameworks: Hadoop/Spark: Distributed processing (MapReduce, Spark SQL). NoSQL Databases: MongoDB (document-based), Cassandra (column-oriented). • Real-Time Visualization: D3.js: Custom interactive visualizations for web applications. Plotly Dash: Building real-time dashboards with Python.	6
3	Advanced Visualization	• Chart Types: Heatmaps: Correlation matrices, user behavior analysis. Geospatial: Folium (Python) for COVID-19 hotspot mapping; Leaflet (R) for GIS applications. • Interactive Dashboards: Tableau: Parameters, actions, and storytelling features.	6

		Power BI: DAX queries, embedded analytics	
4	Statistical Decision Making	• Hypothesis Testing: t-tests/ANOVA: Comparing groups (e.g., A/B testing for marketing). Chi-square: Categorical data analysis (e.g., survey responses). • Regression Analysis: Linear Regression: Predicting housing prices. Logistic Regression: Customer churn prediction. • Time Series: ARIMA models for stock price forecasting.	6
5	ML Visualization	• Model Evaluation: ROC Curves: Classifier performance thresholds. SHAP Values: Interpreting feature importance in ML models. • Dimensionality Reduction: PCA/t-SNE: Visualizing high-dimensional clusters (e.g., customer segmentation).	6
6	Case Studies	• Case Studies: Healthcare: Patient readmission risk dashboards. Finance: Fraud detection visualizations. • AR/VR Trends: Immersive data exploration (e.g., virtual stock market floors).	6

Reference Books:

- Data Science for Business – Provost & Fawcett
- Interactive Data Visualization – Scott Murray

Course Name: Data Analytics & Visualization Lab

Course Code: PEEEC13P

Category: Programme Elective Course

Preamble:

This hands-on lab course develops practical skills in data processing, analysis, and visualization using industry-standard tools. Through experimental learning, students will work with real datasets to implement data pipelines, create interactive visualizations, and build dashboards. The lab focuses on applied techniques for data cleaning, exploratory analysis, and visual storytelling using Python/R, Tableau, and Power BI in a project-based environment.

Pre-requisites:

- Programming Fundamentals (Python/R)
- Basic Statistics
- Introduction to Data Structures

Course Objectives:

After completing this lab course, students will be able to:

- Implement complete data processing pipelines from raw data to insights
- Design and develop interactive visualizations and dashboards
- Apply analytical techniques to solve real-world problems through hands-on projects

Course Outcomes:

Upon completion, learners will be able to:

- CO1: Execute end-to-end data analysis workflows (cleaning, transformation, visualization)
- CO2: Build effective data visualizations and dashboards using modern tools
- CO3: Demonstrate analytical solutions through practical case studies and projects

Course Scheme:

Contact Hours		Credits Assigned

However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Suggested List of Practical's:

Lab Experiments:

- **Data Cleaning & Preprocessing** – Handle missing values, outliers, and feature engineering using Pandas (Python) or dplyr (R).
- **Exploratory Data Analysis (EDA)** – Generate statistical summaries, correlation matrices, and distribution plots.
- **Statistical Testing** – Perform t-tests, ANOVA, and regression analysis with SciPy (Python) or stats (R).
- **Time Series Visualization** – Plot trends, seasonality, and forecasts using Matplotlib/Seaborn or ggplot2.
- **Geospatial Mapping** – Create choropleth and heatmaps with Folium (Python) or Leaflet (R).
- **Interactive Dashboards** – Build real-time dashboards in Tableau, Power BI, or Plotly Dash.
- **ML Model Visualization** – Plot ROC curves, SHAP values, and decision boundaries.
- **Capstone Project** – End-to-end data pipeline from cleaning to interactive visualization

Tools/Platforms:

- Python (Pandas, Matplotlib, Seaborn)
- R (tidyverse, ggplot2)
- Tableau/Power BI
- Jupyter Notebook/RStudio

3. The Visual Display of Quantitative Information - Edward Tufte

Course Name: Big Data Analytics

Course Code: PEEC14T

Category: Programme Elective Course

Preamble:

Big Data Analytics focuses on processing and analyzing massive datasets to extract valuable insights for decision-making. This course covers fundamental concepts, big data frameworks like Hadoop and Spark, machine learning applications, and real-time analytics. Students will gain hands-on experience with industry tools, enabling them to design and implement efficient big data solutions for real-world challenges.

Pre-requisite:

- Data Structure and Database Management System
- Data Mining

Course Objectives:

1. To introduce the concept of Big Data and differentiate traditional data processing approaches from big data approaches using Hadoop.
2. To enable students to understand and implement big data processing using Hadoop HDFS, MapReduce, and MongoDB.
3. To familiarize students with advanced analytics through stream data processing and Apache Spark.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Explain the characteristics and business implications of Big Data and identify use cases suitable for big data solutions.

CO2: Apply Hadoop HDFS and MapReduce programming model for processing large-scale datasets efficiently.

CO3: Demonstrate proficiency in using MongoDB for document-based data storage and querying.

CO4: Analyze and implement data stream mining techniques like sampling, filtering, and counting using algorithms such as Bloom Filters and DGIM.

CO5: Utilize Apache Spark for scalable data analytics including text, web content, and link analysis.

Notwithstanding the above, each course faculty shall have the choice to decide her/his assessment methodology based on the nature of the course. Faculty may propose the revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Unit No.	Contents	Hrs.
1		Module 1: Introduction to Big Data and Hadoop	02
	1.1	Introduction to Big Data: Characteristics of Big Data (Volume, Velocity, Variety, Veracity, Value) , Types of Big Data.	
	1.2	Traditional vs. Big Data Business Approach	
	1.3	Case Study of Big Data Solutions	
	1.4	Hadoop Overview: Concept of Hadoop, Core Hadoop Components, Hadoop Ecosystem	
2		Hadoop HDFS and MapReduce	08
	2.1	Distributed File Systems Physical Organization of Compute Nodes, Large-Scale File-System Organization	
	2.2	MapReduce Programming Model Map Tasks, Grouping by Key, Reduce Tasks, Combiners, Execution Process & Handling Node Failures	
	2.3	Algorithms Using MapReduce Matrix-Vector Multiplication, Relational Algebra Operations (Selection, Projection, Union, Intersection, Difference)	
	2.4	Hadoop Limitations	
3		Introduction to MongoDB	06
	3.1	Introduction to MongoDB: What is MongoDB? Features and Advantages of MongoDB, Comparison with Relational Databases	
	3.2	Terms used in RDBMS and MongoDB	
	3.3	Data Types in MongoDB: BSON (Binary JSON) Overview, Supported Data Types: String, Number, Boolean, Array, Object, Date, etc., Handling Null and Missing Values	
	3.4	MongoDB Query Language: CRUD Operations (Create, Read, Update, Delete), Querying and Filtering Documents, Updating Documents, Deleting Documents	
4		Mining Data Streams	08
	4.1	The Stream Data Model Data-Stream-Management System, Examples of Stream Sources, Stream Queries & Issues in Stream Processing	
	4.2	Sampling Techniques in Data Streams	
	4.3	Filtering Streams Bloom Filter with Analysis	
	4.4	Counting Distinct Elements in a Stream Count Problem, Flajolet-Martin Algorithm, Combining Estimates & Space Requirements	
	4.5	Counting Ones in a Window Cost of Exact Counting, Datar-Gionis-Indyk-Motwani (DGIM) Algorithm, Query Answering in DGIM, Decaying Windows	
5		Spark and Big Data Analytics:	06
	5.1	Spark, Introduction to Data Analysis with Spark.	
	5.2	Text, Web Content and Link Analytics: Introduction, Text Mining, Web Mining, Web Content and Web Usage Analytics, Page Rank, Structure of Web and Analyzing a Web Graph.

Course Name: Big Data Analytics Lab

Course Code: PEEEC14P

Category: Programme Elective Course

Preamble:

Big Data Analytics focuses on processing and analyzing massive datasets to extract valuable insights for decision-making. This course covers fundamental concepts, big data frameworks like Hadoop and Spark, machine learning applications, and real-time analytics. Students will gain hands-on experience with industry tools, enabling them to design and implement efficient big data solutions for real-world challenges.

Pre-requisite:

- Data Structure and Database Management System
- Data Mining
- C/ python/Java programming

Course Objectives:

4. Introduce students to the Hadoop ecosystem and help them understand distributed file storage and processing concepts.
5. Enable students to write and execute basic to advanced MapReduce programs for solving real-world data problems.
6. Familiarize students with NoSQL databases, particularly MongoDB, and perform fundamental data operations using document-based storage.
7. Develop competency in stream processing techniques and real-time analytics using algorithms and Apache Spark.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Demonstrate the use of Hadoop Distributed File System (HDFS) and perform basic operations in a Hadoop ecosystem.

CO2: Design and implement MapReduce programs for data processing tasks such as word count, matrix operations, and real-time analytics.

CO3: Apply NoSQL concepts by performing CRUD operations using MongoDB and analyzing document-based data.

CO4: Simulate data streams and utilize stream processing algorithms and Apache Spark for big data analytics.

However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Suggested list of Practical:

Practical No.	Module No.	Suggested list of Experiments	Topics to be highlighted	CO Map
1	1	Hadoop HDFS Practical: -HDFS Basics, Hadoop Ecosystem Tools Overview. -Installing Hadoop. - Copying File to Hadoop. -Copy from Hadoop File system and deleting file. -Moving and displaying files in HDFS. -Programming exercises on Hadoop	Hadoop architecture, core components (HDFS, MapReduce), ecosystem overview, HDFS commands, distributed file storage concepts	CO1
2	1	Implement Word Count using MapReduce	MapReduce programming basics – Mapper, Reducer, Combiners	CO1
3	3	Matrix-Vector multiplication using MapReduce	Parallel data processing using MapReduce model	CO2
4	3	Perform Selection, Projection, Union operations using MapReduce	Relational algebra in distributed systems	CO2
5	2	Develop a Map Reduce program that mines weather data and displays appropriate messages indicating the weather conditions of the day.	MapReduce Programming Model and Text File Parsing and Data Extraction	CO2
6	2	Develop a MapReduce program to find the tags associated with each movie by analyzing movie lens data.	MapReduce Programming Model and Text File Parsing and Data Extraction	CO2
7	3	Install MongoDB and perform CRUD operations	MongoDB shell, inserting, querying, updating, and deleting documents	CO2
8	4	Simulate a stream of sensor data and perform basic stream queries	Streaming concepts, real-time vs. batch processing	CO3
9	4	Estimate count of distinct elements using Flajolet-Martin Algorithm	Approximate counting, hash-based algorithms	CO4
10	5	Install Apache Spark and perform basic data analysis using PySpark	RDDs, DataFrames, Spark transformations and actions	CO4

Course Name: Internet of Things and Edge Computing

Course Code: PEEEC15T

Category: Programme Elective Course

Preamble:

This course explores the convergence of Internet of Things (IoT) and Edge Computing, delving into the technologies and applications that are transforming our world. This course delves into the rapidly evolving landscape where everyday objects are becoming intelligent and interconnected. Students will explore how sensors, actuators, and embedded systems are weaving a web of data, transforming how we live, work, and interact with the environment.

The course will equip students with a foundational understanding of IoT, its core technologies, and communication protocols. Students will delve into the power of Edge Computing, a paradigm shift that brings processing capabilities closer to the data source, enabling real-time analytics, faster decision-making, and improved efficiency.

Pre-requisites:

- C Programming
- Microprocessor and Microcontroller
- IoT Sensor Technology

Course Objectives:

- To Understand the core concepts of the Internet of Things (IoT) and its key components & Levels.
- Analyze the role of Edge Computing in distributed processing and data analysis within the IoT ecosystem.
- Evaluate the security challenges and potential vulnerabilities within IoT deployments.
- Understand the fundamental concepts of IoT, CPS, and their convergence.

Course Outcomes:

Student will be able to:

CO1: Understand the interaction between IoT devices, cloud platforms, and physical systems in CPS.

CO2: Apply principles of Edge Computing to analyze data at the network edge.

CO3: Analyze the role of Edge Computing in distributed processing and data analysis within the IoT ecosystem..

CO4: Identify and discuss security best practices for secure IoT deployments.

CO5: Analyze the role of cloud computing in managing and processing data from IoT device

CO6: Develop creative applications of IoT technology in chosen fields.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
2	-	2	-

Assessment Guidelines:

Head of learning	ISA	MSE	ESE	Total
Theory	15	20	40	75

The assessment guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Introduction to IoT and CPS	1.1 Introduction to Cyber-Physical Systems (CPS) 1.2 Characteristics and applications of CPS 1.3 Convergence of IoT and CPS: creating intelligent systems	5
2	Introduction to Edge Computing	2.1 What is Edge Computing? 2.2 Benefits of Edge Computing in the IoT ecosystem (e.g., reduced latency, improved efficiency) 2.3 Edge Computing architectures (e.g., edge nodes, fog computing) Resource constraints and limitations of edge devices	5
3	Edge Computing Applications and Programming	3.1 Case studies of Edge Computing applications in IoT (e.g., predictive maintenance, autonomous vehicles) 3.2 Introduction to Edge Computing development tools and frameworks 3.3 Programming for edge devices (e.g., embedded systems programming)	5
4	Security Considerations in IoT	4.1 Security vulnerabilities in IoT deployments 4.2 Authentication and authorization mechanisms 4.3 Data encryption and privacy concerns 4.4 Secure coding practices for IoT devices	5
5	Cloud Computing for IoT	5.1 Cloud service models for IoT (IaaS, PaaS, SaaS) 5.2 Benefits of cloud computing in managing and processing IoT data (scalability, security, etc.) 5.3 Cloud platforms for IoT (e.g., AWS IoT, Azure IoT) 5.4 Data pipelines for transferring and processing sensor data in the cloud	5
6	Future Trends in IoT CPS and Edge Computing	6.1 Emerging technologies (e.g., Artificial Intelligence, Block chain) in IoT 6.2 Impact of 5G on IoT and Edge Computing 6.3 Ethical considerations and responsible development of CPS solutions	5

3. "Fog Computing: Theory, Practice, and Applications" by Tom Pfeifer and Dominic Grulich (2019)

Course Name: Internet of Things and Edge Computing Laboratory

Course Code: PEEC15P

Category: Programme Elective Course

Preamble:

This laboratory course delves into the practical applications of the Internet of Things (IoT), Edge Computing, Cloud Computing, and Cyber-Physical Systems (CPS). Students will gain hands-on experience by working with real-world scenarios and exploring the interaction between these technologies.

The lab will equip students with the skills to:

- Design and implement basic IoT systems
- Utilize Edge Computing platforms for data processing closer to the source
- Leverage cloud services for data storage, analysis, and visualization
- Integrate IoT devices with Cyber-Physical Systems for real-world applications

Pre-requisites:

- C Programming
- Microprocessor and Microcontroller
- IoT Sensor Technology

Course Objectives:

- Gain practical experience in setting up and configuring IoT devices.
- Understand and implement data collection and processing techniques on edge devices.
- Analyze and visualize data generated by IoT devices using cloud platforms.
- Design and implement basic Cyber-Physical Systems using IoT and cloud integration.
- Apply security best practices in developing and deploying IoT solutions.

Course Outcomes:

Student will be able to:

- CO1: Successfully configure and program various IoT devices (sensors, actuators).
- CO2: Utilize Edge Computing platforms for data processing tasks on edge nodes.
- CO3: Develop data pipelines to transfer data from IoT devices to the cloud.
- CO4: Analyze and visualize sensor data using cloud-based tools and services.
- CO5: Design and prototype a basic Cyber-Physical System with IoT and cloud integration.
- CO6: Implement secure communication protocols for data transmission in an IoT system.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
-	2	-	1

Assessment Guidelines:

Head of learning	ISA	MSE	ESE	Total
Practical	25	-	25	50

The assessment guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

List of Practical's:

Experiment 1: Setting Up an IoT Development Environment

- Familiarize with development boards (e.g., Arduino, Raspberry Pi)
- Install necessary software and libraries

Experiment 2: Sensor Interfacing and Data Acquisition

- Interface various sensors (e.g., temperature, humidity) with the development board
- Write code to collect and record sensor data

Experiment 3: Communication Protocols for IoT

- Experiment with different communication protocols (e.g., Wi-Fi, Bluetooth)
- Develop code to send and receive data between devices

Experiment 4: Introduction to Edge Computing Platforms

- Explore popular Edge Computing platforms (e.g., AWS Greengrass, Azure IoT Edge)
- Deploy simple applications for data processing on edge devices

Experiment 5: Cloud Integration for IoT Data

- Connect IoT devices to a cloud platform (e.g., AWS IoT, Azure IoT Hub)
- Develop code to send sensor data to the cloud

Experiment 6: Data Visualization with Cloud Services

- Utilize cloud platform tools to visualize sensor data in real-time (e.g., dashboards, charts)

Experiment 7: Introduction to Cyber-Physical Systems (CPS)

- Simulate a basic CPS scenario (e.g., smart home, industrial automation)
- Integrate IoT devices with actuators to control physical processes

Experiment 8: Security Considerations in IoT Systems

- Implement secure communication protocols (e.g., encryption)
- Understand best practices for securing data transmission and storage in IoT

Mini Projects / Case Study :-

Design and develop a complete IoT-based system with Edge Computing and Cloud integration

Course Name: ASIC and Verification

Course Code: PEEC16T

Category: Programme Elective Course

Preamble:

This course introduces students to different methods used for Verification of digital circuits using System VERILOG. This course gives guidelines for building Test-bench helps to understand how and why to use classes, randomization, and functional coverages.

Pre-requisites:

1. Electronics Devices and Circuits.
2. Logic circuits.
3. Digital VLSI.
4. Digital system design with VERILOG & FPGA.

Course Objectives:

The aim of this course is,

1. To highlight the System Verilog Verification Language Construct.
2. A profound understanding of creating test-bench for verification of digital circuits.
3. Use of classes, randomization, and functional coverages.

Course Outcomes:

CO1: Students will be able to understand. Verification techniques to serve as a foundation for learning and using the System Verilog language.

CO2: Students will be able to illustrate various data types such as arrays, structures, and enumerated types.

CO3: Students will be able to Design the various Test-benches for verification.

CO4: Students will be able to understand the concept of randomization, threads and Inter process communication.

Course Scheme:

However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Verification Guidelines	1.1 Verification Process, Verification Methodology, Basic Test-Benches functionality. Test bench components, Layered testbench.	4
2	Basics of System Verilog	2.1 Introduction to System Verilog, Data types, Built in data types, Fixed size arrays, Dynamic arrays, queues, and associative arrays. Array methods. 2.2 Types, creating new types, enumerated types, Type conversion, Static and Dynamic cast.	8
3	System Verilog control flow.	3.1 Loops: while/do while, for each loop, for loop, forever loop. Case statements. 3.2 Functions, Tasks, Blocking and Non-Blocking. Randomization, System Verilog interfaces.	5
4	System Verilog object-oriented programming.	4.1 Introduction, Class, creating new object, object declaration, class methods. Defining methods outside the class. Static and Global variables. Class inside class. Dynamic objects, copying objects.	8
5	System Verilog threads and communication	5.1 fork_join and begin_end. Semaphores and events. Mail-boxes etc.	5

Course Name: Deep Learning

Course Code: PEEC17T

Category: Programme Elective Course

Preamble:

This course provides an in-depth study of deep learning architecture, algorithms, and applications. It covers neural networks, backpropagation, CNNs, RNNs, GANs, and transformers, with hands-on implementation using TensorFlow and PyTorch. Through practical exercises, case studies, and projects, students will develop expertise in designing, training, and optimizing deep neural networks for research and industry applications.

Pre-requisites:

- Basic mathematics and Statistical concepts
- Linear algebra
- Machine Learning
- Soft Computing

Course Objectives:

After completing this course, students will be able to:

- To learn the fundamentals of Neural Network.
- To gain an in-depth understanding of training Deep Neural Networks.
- To acquire knowledge of advanced concepts of Convolution Neural Networks, Autoencoders and Recurrent Neural Networks.
- Students should be familiar with the recent trends in Deep Learning.

Course Outcomes:

Learner will be able to :

CO1: Gain basic knowledge of Neural Networks.

CO2: Acquire in depth understanding of training Deep Neural Networks.

CO3: Design appropriate DNN model for supervised, unsupervised and sequence learning applications.

CO4: Gain familiarity with recent trends and applications of Deep Learning.

Course Name: Deep Learning Lab

Course Code: PEEC17P

Category: Programme Elective Course

Preamble:

The Deep Learning Lab provides a hands-on environment for students to implement and experiment with deep learning concepts, architectures, and frameworks. This lab complements theoretical knowledge by enabling students to design, train, and optimize neural networks using tools like TensorFlow and PyTorch.

Pre-requisites:

- Programming Fundamentals (Python/R)
- Engineering Mathematics

Course Objectives:

After completing this lab course, students will be able to:

- To implement basic neural network models for simulating logic gates.
- To implement various training algorithms for feedforward neural networks.
- To design deep learning models for supervised, unsupervised and sequence learning.

Course Outcomes:

Upon completion, learners will be able to:

CO1: Implement basic neural network models to learn logic functions.

CO2: Design and train feedforward neural networks using various learning algorithms.

CO3: Build and train deep learning models such as Autoencoders, CNNs, RNN, LSTM etc.

Course Scheme:

However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Suggested List of Practical's:

Lab Experiments:

- Implement logistic regression classification with (a) gradient descent and (b) stochastic gradient descent method. Plot cost function over iteration.
- Experiment with logistic regression by adding momentum term, and adaptive subgradient method
- Write the code to learn weights of a perceptron for Boolean functions (NOT, OR, AND, NOR, and NAND).
- Implement a feed-forward neural network for solving (a) regression and (b) 2-class classification problem. Also experiment with hyper-parameter tuning.
- Train and test a feed-forward neural network for multi-class classification using softmax layer as output.
- Create a 2D and 3D CNN for image classification. Experiment with different depth of network, striding and pooling values.
- Implement (a) RNN for image classification, (b) GRU network and (c) Implement LSTM networks
- Implement an auto-encoder, denoising autoencoders and sparse autoencoders.
- Design a stochastic encoders and decoders.

Tools/Platforms:

- Python (Pandas, Matplotlib, Seaborn)
- R (tidyverse, ggplot2)
- Tableau/Power BI
- Jupyter Notebook/RStudio

3. The Visual Display of Quantitative Information - Edward Tufte

Course Name: Recommendation Systems

Course Code: PEEC18T

Category: Programme Elective Course

Preamble:

Recommendation Systems have become a crucial part of modern applications, helping users discover relevant products, services, and content. This course covers the fundamental principles, algorithms, and techniques used to build recommendation systems. It provides a deep understanding of collaborative filtering and content-based filtering. Hands-on experience with real-world datasets and case studies ensures a practical learning approach.

Pre-requisite:

- Python Programming
- Machine Learning
- Database
- Data Structures

Course Objectives:

- To introduce the core concepts and techniques used in recommendation systems.
- To explore different recommendation algorithms, including collaborative filtering, content-based filtering, and hybrid approaches.
- To understand how deep learning and AI techniques enhance recommendations.
- To apply recommendation techniques to real-world datasets.
- To evaluate and optimize recommendation models using appropriate metrics.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Understand the principles and applications of recommendation systems.

CO2: Implement different recommendation techniques and compare their effectiveness.

CO3: Design and develop a recommendation system using machine learning models.

CO4: Evaluate the performance of recommendation systems using standard metrics.

CO5: Apply recommendation techniques to domains such as e-commerce, media, and healthcare.

Course Scheme:

Notwithstanding the above, each course faculty shall have the choice to decide her/his assessment methodology based on the nature of the course. Faculty may propose the revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Unit No.	Contents	Hrs.
1		Introduction to Recommendation Systems	04
	1.1	Definition and Types of recommendation systems	
	1.2	Business value of Recommender System A conceptual framework for understanding recommender system	
	1.3	Real World Applications	
	1.4	Challenges in building recommendation systems	
2		Data for recommendation: Explicit Vs Implicit data collection	04
	2.1	Scales of measurement	
	2.2	Statistical and machine learning foundations for recommender system	
	2.3	Data preprocessing	
3		Collaborative Filtering	06
	3.1	Collaborative filtering approaches: Memory based and model based	
	3.2	Memory based collaborative filtering foundations: Distance and similarity measures User based collaborative filtering	
	3.3	Item based collaborative filtering	
	3.4	Model based collaborative filtering foundations: matrix factorization, UV decomposition, Singular value decomposition Model based collaborative filtering techniques: SVD, SVD++ etc.	
4		Content based recommender System	06
	4.1	Feature engineering: Feature extraction, feature selection, dimensionality reduction	
	4.2	Content-based recommended system examples with few supervised machine learning techniques	
5		Evaluation of recommended systems	06
	5.1	Online and offline evaluation, metrics such as RMSE, AME, Good Item MAE, Good predicted item MAE,	
	5.2	Precision, Recall, F1 Measure, NDCG, Average Reciprocal Rank	
6		Case Studies & Applications	04
	7.1	Overview of other types of recommended systems such as trust based, social network based, and context aware systems	
	7.2	Case Studies (E.g.: Netflix, Flipkart)

Course Name: Recommendation Systems Lab

Course Code: PEEC18P

Category: Programme Elective Course

Preamble:

The Recommendation Systems Laboratory is designed to provide hands-on experience in implementing and evaluating various recommendation algorithms. Students will work with real-world datasets and apply machine learning, deep learning, and hybrid approaches to build personalized recommendation systems. The course ensures that students gain practical exposure to industry-standard tools and libraries used for recommendation model development.

Pre-requisite:

- Basic knowledge of Python programming
- Understanding of Probability, Statistics, and Linear Algebra
- Familiarity with Machine Learning concepts
- Basic knowledge of Databases and Data Processing

Course Objectives:

1. Provide hands-on experience in implementing different recommendation algorithms.
2. Develop skills in working with real-world datasets for building recommendation models.
3. Learn to evaluate and optimize the performance of recommendation systems.
4. Apply deep learning techniques for recommendation models.
5. Explore industry use cases and ethical considerations in recommendation systems.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Understand and explore different types of recommendation systems.

CO2: Apply various recommendation algorithms using Python libraries.

CO3: Analyze the performance of recommendation models using evaluation metrics.

CO4: Evaluate and compare different recommendation techniques based on efficiency and accuracy.

CO5: Develop a complete recommendation system for a real-world application.

Category: Programme Elective Course

Preamble:

The modern world is becoming increasingly interconnected through technology called Internet of Things (IoT). IoT is rapidly evolving field that is transforming the way we live, work, and interact with the real world. This course is useful for learning security aspects of IoT applications. Security is a major requirement for IoT applications since variety of devices and networks are involved in IoT applications. This course teaches fundamental aspects of security and different techniques for providing security to IoT applications.

Pre-requisites:

C Programming
Object Oriented Programming
Microprocessor and Microcontroller

Course Objectives:

- To understand the core concepts of the IoT security.
- To explore different types of vulnerabilities and threats.
- To gain a foundational knowledge of testing.
- To gain foundation knowledge of tools and framework.
- To get understanding of firmware security aspects.
- To gain knowledge of common attack vectors.

Course Outcomes:

Student will be able to:

CO1: Understand the concepts of security in IoT system.

CO2: Implement mechanism to handle IoT Vulnerabilities and Threats.

CO3: Perform testing of IoT systems.

CO4: Use monitoring tools for providing IoT security.

CO5: Use techniques for efficient firmware design of IoT application.

CO6: Identify different attacks.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
2	2	2	1

Assessment Guidelines:

Head of learning	ISA	MSE	ESE	Total
Theory	15	20	40	75

The assessment guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment

methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Introduction	Overview of industrial control systems (ICS), ICS operation & components, Perdue model, SCADA systems, Cyber-physical systems (CPS) & IoT	4
2	IoT Vulnerabilities and Threats	STRIDE methodology, OWASP IoT vulnerabilities, Privacy & trust, Insufficient authentication/authorization, Insufficient access control, Attacks on IoT data, Attacks on IoT layered architecture, Security concerns in IoT applications, Security concerns in SCADA	6
3	IoT Pen Testing	Active vulnerability analysis tools, Port scanning, Operating system fingerprinting and version scanning, Penetration testing, Attack surface mapping	6
4	Monitoring Tools	Exploitation using I2C & SPI, JTAG debugging and exploitation, Boundary scan, Test access ports	6
5	Firmware Implementation	Understanding firmware, Extracting firmware, Manual firmware extraction, Automated file system extraction, Firmware internals, Backdooring a firmware, Static & dynamic analysis	4
6	Attack Surfaces	Software defined radio, Exploiting ZIGBEE & BLE, Power analysis attack, Invasive attack, Perturbation - attacks, Electromagnetic side channel attack, fault injection attack, timing attack, covert channel attacks	4
Total			30

Text Books:

1. "Securing the Internet of Things", Shancang Li, Li Da Xu, Syngress, Elsevier, 2017
2. "Security and Privacy in Internet of Things (IoTs) Models, Algorithms, and Implementations", Edited by Fei Hu, CRC Press, 2016

Reference Books:

1. "Practical Internet of Things Security", Brian Russell Drew Van Duren, Packt Publishing, 2016

Course Name: Internet of Things Security and Trust

Course Code: PEEC19P

Category: Programme Elective Course

Preamble:

The modern world is becoming increasingly interconnected through technology called Internet of Things (IoT). IoT is rapidly evolving field that is transforming the way we live, work, and interact with the real world. This course is useful for learning security aspects of IoT applications. Security is a major requirement for IoT applications since variety of devices and networks are involved in IoT applications. This course teaches implementation of different security techniques for IoT applications. It also enables learners to use standard tools and frameworks for developing efficient security solutions.

Pre-requisites:

- C Programming
- Object Oriented Programming
- Microprocessor and microcontroller

Course Objectives:

- To understand the core concepts of the IoT security.
- To explore different types of vulnerabilities and threats.
- To gain a foundational knowledge of testing.
- To gain foundation knowledge of tools and framework.
- To get understanding of firmware security aspects.
- To gain knowledge of common attack vectors.

Course Outcomes:

Student will be able to:

CO1: Identify metrics for providing security in IoT system.

CO2: Implement techniques for handling IoT Vulnerabilities and Threats.

CO3: Perform testing of IoT systems.

CO4: Use tools and frameworks for providing security to IoT applications.

CO5: Design efficient secure firmware for IoT applications.

CO6: Implement mechanism to handle different types of attacks in IoT application.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
-	2	-	1

Assessment Scheme:

Head	ISA	MSA	ESA	Total
Practical	25	-	25	25

Suggested List of Practical:

All practical will be project based with focus on following concepts

1. Identification and implementation of standard metrics for providing security.
2. Handle different types of threats and vulnerabilities in IoT application.
3. Perform security testing of IoT application.
4. Identify and explore different tools for monitoring and providing security to IoT applications.
5. Design secure firmware for IoT application.
6. Handle different types of attacks in IoT application.

Text Books:

1. "Securing the Internet of Things", Shancang Li, Li Da Xu, Syngress, Elsevier, 2017
2. "Security and Privacy in Internet of Things (IoT) Models, Algorithms, and Implementations", Edited by Fei Hu, CRC Press, 2016

Reference Books:

"Practical Internet of Things Security", Brian Russell Drew Van Duren, Packt Publishing, 2016

Assessment: In-Semester-Assessment (25 Marks)

1. **All the students are required (mandatory) to be present in person during the laboratory conduction session.** The ISA will consist of awarding marks for the complete, successful and in time submission of minimum 10 dually graded experiments (project based).
2. **Project prototype to be developed and demonstrated.**
3. **Graded marks for 10 experiments will be converted to ISA marks of 25. Only one repeat session is allowed to cover up the missed lab session.**
4. Students will be awarded grade / or marks on each experiment based on his / her own contribution, showcasing the knowledge application skills, demonstrating measurement work, developing code / solution to the given problem and peer interaction. **Student will lose the marks if he or she remains absent for the Laboratory Practical Session.**

Course Name: System on Chip

Course Code: PEEC20T

Category: Programme Elective Course

Preamble:

This course provides a comprehensive introduction to the design and architecture of System on Chip (SoC), covering fundamental concepts such as processor architecture, memory design, and interconnect systems. Students will explore trade-offs in performance, power, and area, along with techniques for minimizing delays and costs. The curriculum includes detailed discussions on customization, configuration, and reconfigurable concepts tailored for modern SoC applications. Through a blend of theoretical and practical insights, learners will gain expertise in designing robust and efficient SoC solutions. The course is structured into six modules, totalling 30 hours, to ensure a thorough understanding of each critical component. Ideal for aspiring engineers, this course equips participants with the skills needed to tackle real-world challenges in SoC development.

Pre-requisites:

1. Microprocessors & Microcontrollers
2. Computer Organization & Architecture
3. Digital Electronics
4. VLSI Design (Optional but beneficial)

Course Objectives:

After completing this course, students will be able to:

1. To know the basic concepts of System on Chip
2. To understand SoC design with respect to Processor Architecture, Memory, Interconnect and Trade-offs
3. To be familiar with basics of SoC Customization and Configuration

Course Outcomes:

Learners will be able to:

CO1: Understand overview of SoC System Architecture

CO2: Select Processor for a SoC

CO3: Develop knowledge of memory and interconnect design for SoC

CO4: Apply the knowledge of design tradeoffs for optimized SoC performance

CO5: Describe SoC Customization and Configuration

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
2	-	2	-

Assessment Guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	15	20	40	75

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Introduction to SoC and System Approach	1.1 Overview of System Architecture: Components of a System: Processor, Memory and Interconnects, Basic SoC Model, Hardware and Software: Programmability versus Performance 1.2 Processor Architectures: Functional view approach, Architectural view approach 1.3 Memory and Addressing: Architecture of Memory and Memory for SoC operating Systems 1.4 System Interconnects: Bus based and NoC based interconnect Approach An Approach for SOC Design	7
2	Processor Architecture for SoC	2.1 Processor Selection: Overview and Processor Core Selection 2.2 Basic concepts in Processor Microarchitecture; Basic elements in Instruction Handling: Decoding, Bypassing and Execution unit 2.3 Introduction to Robust Architectures	4
3	Design Trade off and minimizing delays and cost	3.1 Design Tradeoff: Time, Area and Power, reliability and Configurability, 3.2 Buffers: Minimizing Pipeline Delays 3.3 Branches: Reducing Branch Cost	4
4	Memory Design	4.1 Overview: Outline for Memory Design, SoC external Flash Memory And internal memory placement, Size tradeoff 4.2 Scratch pad and Cache Organization: Write Policies, Strategies for Line Replacement at miss time, Multilevel Caches, L1-Icache L1-Dcache 4.3 Memory Address Translation: Translation of Virtual to Real, TLB	6
5	Interconnect Design	5.1 Overview of Interconnect Architectures 5.2 Bus Architectures: Arbitration, Bridge and Bus Structure 5.3 Standard Buses: AMBA and Core Connect Bus	5

6	Customization and Configuration	6.1 Introduction: Estimating Effectiveness of Customization 6.2 Overview of SoC Customization 6.3 Customizing Instruction Processors 6.4 Introduction to Reconfigurable concept	4
Total			30

Textbooks:

1. Michael J. Flynn and Wayne Luk, Computer System Design System-on-Chip, Wiley India Pvt. Ltd.

Course Name: System on Chip Lab

Course Code: PEEC20P

Category: Programme Elective Course

Preamble:

This hands-on lab course complements the theoretical foundations of SoC design by providing practical exposure to key tools, methodologies, and workflows used in industry and academia. Through 10 structured lab sessions, students will explore processor simulation, memory hierarchy optimization, interconnect design, FPGA prototyping, and verification techniques. The course emphasizes open-source tools (e.g., gem5, QEMU, RISC-V) alongside industry-standard platforms (e.g., Cadence, Synopsys) to bridge the gap between theory and real-world SoC development. By the end of the course, students will be proficient in designing, analyzing, and optimizing SoC components while adhering to power, performance, and area (PPA) constraints.

Pre-requisites:

- Digital Electronics (mandatory).
- Computer Architecture (mandatory).
- FPGA/VLSI basics (recommended).
- Programming (C/Python/Verilog).

Course Objectives:

By the end of this course, students will be able to:

- Simulate and analyze processor architectures using tools like QEMU and gem5.
- Design and evaluate memory subsystems (caches, scratchpads) using trace-driven tools (Dinero IV).
- Model on-chip interconnects (AMBA buses, NoCs) and analyze their performance.
- Prototype SoC components on FPGAs using open-source (Litex) or licensed (Vivado) toolchains.
- Optimize PPA tradeoffs through RTL synthesis and static timing analysis (OpenSTA/Design Compiler).
- Extend processor ISAs (e.g., RISC-V) and verify custom instructions.
- Develop verification testbenches using UVM/SystemC for functional validation.
- Compare open-source and commercial tools for SoC design flows.

Course Outcomes:

Upon completion, learners will be able to:

CO1: Design and simulate processor architectures (RISC-V/ARM) using tools like QEMU/gem5 to analyze performance metrics.

CO2: Optimize memory hierarchies (caches, scratchpads) using trace-driven tools (Dinero IV) and justify design choices.

CO3: Implement on-chip interconnects (AMBA/NoC) and evaluate their latency/throughput in SystemC or BookSim.

CO4: Prototype a minimal SoC (processor + peripherals) on FPGA using open-source (Litetex) or licensed (Vivado) toolchains.

CO5: Synthesize RTL designs (Verilog/VHDL) and analyze power-area-delay tradeoffs using OpenSTA/Synopsys tools.

CO6: Verify SoC modules using UVM testbenches and demonstrate functional correctness.

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical

Head of Learning	ISA	MSE	ESE	Total
Theory	25	--	25	50

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Suggested List of Practicals:

Lab Experiments:

1. SoC Design Flow Overview

Tool: Cadence Innovus (Licensed) / OpenROAD (Open-source)

Task:

Explore the end-to-end SoC design flow (RTL to GDSII).

Set up a basic project in the chosen toolchain.

2. Processor Core Simulation

Tool: QEMU (Open-source) / *ARM DS-5* (Licensed)

Task:

Simulate a RISC-V/ARM core using QEMU.

Analyze pipeline stages and instruction execution.

3. Cache Memory Performance Analysis

Tool: gem5 (Open-source)

Task:

Model L1/L2 caches in gem5.

Compare hit/miss rates for different cache configurations.

4. Bus Arbitration & AMBA AHB Simulation

Tool: *SystemC/TLM-2.0* (Open-source)

Task:

Implement a simple AMBA AHB bus with arbitration logic.

Simulate multi-master contention scenarios.

5. NoC (Network-on-Chip) Design

Tool: BookSim2 (Open-source) / Noxim (Open-source)

Task:

- Model a 2D mesh NoC topology.
Analyze latency and throughput under varying traffic patterns.
6. Memory Hierarchy Optimization
Tool: Dinero IV (Open-source)
Task:
Trace memory accesses of a benchmark program.
Evaluate performance with scratchpad vs. cache memory.
7. FPGA-Based SoC Prototyping
Tool: Xilinx Vivado (Licensed) / Litex (Open-source)
Task:
Implement a soft-core (e.g., RISC-V) on an FPGA.
Interface with peripherals (UART, GPIO).
8. Power & Area Tradeoff Analysis
Tool: Synopsys Design Compiler (Licensed) / OpenSTA (Open-source)
Task:
Synthesize a small RTL design.
Compare power/area metrics for different constraints.
9. Custom Instruction Set Extension
Tool: RISC-V GCC Toolchain (Open-source)
Task:
Add a custom instruction to a RISC-V core.
Verify using spike simulator.
10. SoC Verification with UVM
Tool: Verilator + UVM (Open-source) / Cadence Xcelium (Licensed)
Task:
Develop a UVM testbench for a simple SoC module.
Run functional coverage checks.

Lab Setup Recommendations:

- Open-source stack: gem5 + QEMU + RISC-V tools + Verilator.
Licensed tools (if available): Cadence/Synopsys for industry-grade flows.
FPGA boards: Xilinx Artix-7 or Lattice ECP5 for hands-on prototyping.

These labs balance theory and hands-on practice, preparing students for both academic and industry challenges in SoC design.

Tools/Platforms:

Category	Open-Source	Licensed
Simulation	QEMU, gem5, Spike	ARM DS-5, Synopsys VCS
Synthesis	Yosys + OpenSTA	Synopsys Design Compiler
FPGA Prototyping	Litex, Verilator	Xilinx Vivado, Intel Quartus
Verification	Verilator + UVM	Cadence Xcelium

Course Name: Natural Language Processing

Course Code: PEEC21T

Category: Programme Elective Course

Preamble:

Natural Language Processing (NLP) bridges the gap between human communication and computational systems, enabling machines to understand, interpret, and generate language. This course introduces foundational concepts—from probability and linguistics to advanced algorithms like Hidden Markov Models and WordNet—equipping students to tackle real-world NLP challenges. Through a blend of theory and practical techniques, learners will explore key tasks such as tokenization, POS tagging, semantic analysis, and applications like machine translation and sentiment analysis. Emphasis is placed on overcoming ambiguities in language processing while leveraging statistical and knowledge-based approaches. By the end, students will gain the skills to design and implement NLP systems for diverse domains.

Pre-requisites:

1. Basic Programming (Python/R)
2. Introductory Statistics
3. Probabilistic Graphical Models

Course Objectives:

After completing this course, students will be able to:

- To understand natural language processing and to learn how to apply basic algorithms in this field.
- To get acquainted with the basic concepts and algorithmic description of the main language levels: morphology, syntax, semantics, and pragmatics.
- To design and implement applications based on natural language processing

Course Outcomes:

Learners will be able to:

CO1: Have a broad understanding of the field of natural language processing.

CO2. Understand the mathematical and linguistic preliminaries necessary for various processes in NLP

CO3. Be able to Design, implement and test algorithms for NLP problems

CO4. Perform Word-Level, Syntax-Level and Semantic-Level Analysis

CO5. Develop basic understanding of Pragmatics in NLP

CO6. Be able to apply NLP techniques to design real world NLP applications

Course Name: Natural Language Processing Lab

Course Code: PEEC21P

Category: Programme Elective Course

Preamble:

The lab sessions in this course are designed to provide hands-on experience with core NLP techniques, bridging theoretical concepts with real-world implementation. Students will work on tasks such as tokenization, morphological analysis, POS tagging using HMMs, word sense disambiguation, and sentiment analysis using Python and popular NLP libraries. Through experiments like building n-gram models, applying the Viterbi algorithm, and leveraging WordNet, learners will develop problem-solving skills for linguistic challenges. Emphasis is placed on data preprocessing, algorithm tuning, and evaluating model performance. By the end of the lab sessions, students will be equipped to design, debug, and optimize NLP pipelines for diverse applications.

Pre-requisites:

- Programming Fundamentals (Python/R)
- Basic Statistics

Course Objectives:

After completing this lab course, students will be able to:

- Develop hands-on proficiency in implementing core NLP techniques—such as tokenization, POS tagging, and semantic analysis—using Python and modern NLP libraries (e.g., NLTK, spaCy).
- Design and evaluate statistical and machine learning models for NLP tasks (e.g., HMMs for POS tagging, n-gram language models, sentiment analysis) while addressing real-world challenges like ambiguity and data sparsity.
- Apply NLP pipelines to solve domain-specific problems (e.g., information retrieval, question answering) by integrating preprocessing, algorithms, and performance metrics (accuracy, F1-score).

Course Outcomes:

Upon completion, learners will be able to:

CO1: Design, code, and evaluate NLP workflows—such as text preprocessing (tokenization, stemming), feature extraction (n-grams, TF-IDF), and model training—using Python tools (NLTK, spaCy).

CO2: Students will demonstrate the ability to build and optimize models (e.g., HMMs for POS tagging, word sense disambiguation with WordNet) and interpret results using metrics like accuracy, perplexity, or F1-score

CO3: Students will develop solutions for applications like sentiment analysis, named entity recognition, or information retrieval, while addressing challenges such as ambiguity, scalability, and noisy text.

Course Scheme:

Suggested List of Practical's:

Lab Experiments:

- "Tokenization and Text Preprocessing: Implementing Word Segmentation, Stemming, and Lemmatization"
(Covers: Tokenization, Porter Stemmer, Lemmatization)
- "N-gram Language Models: Building and Evaluating Unigram, Bigram, and Trigram Models with Smoothing"
(Covers: N-grams, Probability Distributions, Perplexity Evaluation)
- "Parts-of-Speech Tagging Using Hidden Markov Models and the Viterbi Algorithm"
(Covers: HMMs, Penn Treebank Tagset, Viterbi Decoding)
- "Word Sense Disambiguation: Implementing Lesk's Algorithm with WordNet"
(Covers: Lexical Semantics, Synsets, Lesk's Algorithm)
- "Sentiment Analysis: Machine Learning vs. Lexicon-Based Approaches for Document Classification"
(Covers: Applications, Cosine Similarity, Sentiment Lexicons)
- "Named Entity Recognition (NER) Using Conditional Random Fields (CRFs) or spaCy"
(Covers: Tagging, Statistical Models, Entity Extraction)
- "Anaphora Resolution: Implementing Hobbs' Algorithm for Coreference Resolution"
(Covers: Discourse Models, Reference Resolution, Syntactic Constraints)
- "Building a Simple Question-Answering System Using TF-IDF and Cosine Similarity"
(Covers: Information Retrieval, Vector Space Models, Applications)

Tools/Platforms:

1. **Tools/Libraries:** Suggest using Python with NLTK, spaCy, scikit-learn, or Hugging Face for implementation.
2. **Extensions:** Experiments 3, 5, and 8 can be scaled into mini-projects.
3. **Evaluation:** Include metrics like accuracy (POS/NER), F1-score (Sentiment/QA), or perplexity (N-grams).

Textbooks:

1. Daniel Jurafsky, James H. Martin, Speech and Language Processing|| Second Edition, Prentice Hall.
2. Christopher D. Manning and Hinrich Schutze, Foundations of Statistical Natural Language Processing,

Course Name: Text, Web and Social Media Analytics

Course Code: PEEC22T

Category: Programme Elective Course

Preamble:

This course provides a comprehensive foundation in text, web, and social media analytics, covering essential techniques from tokenization and entity recognition to transformer models and ethical AI. Students will gain hands-on experience with NLP pipelines, web scraping, sentiment analysis, and network analytics using modern open-source tools. The curriculum emphasizes real-world applications like misinformation detection and recommendation systems while addressing critical ethical considerations. By course completion, learners will be equipped to extract insights from digital content and deploy responsible analytics solutions.

Pre-requisite:

- Python Programming
- Data Mining

Course Objectives:

Develop proficiency in NLP techniques (tokenization, transformers) and network analytics to extract insights from unstructured text and social media data.

Design and deploy analytics pipelines (web scraping, recommendation systems) while addressing bias, privacy, and compliance challenges.

Apply sentiment analysis, trend detection, and influence mapping to tackle misinformation, pricing strategies, and user behaviour modelling.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Recall and explain core text processing techniques including tokenization, normalization and vectorization methods.

CO2: Implement NLP pipelines using transformers and apply bias mitigation techniques to real-world text datasets.

CO3: Examine and compare different web data collection methods while evaluating their ethical implications.

CO4: Assess influence patterns and recommendation systems in social networks using graph theory concepts.

CO5: Design and build sentiment analysis and network mapping solutions for social media datasets.

CO6: Critique model outputs for bias and fairness, then deploy monitored analytics solutions with feedback mechanisms.

Course Scheme:

Contact Hours		Credits Assigned
Theory	Practical	Theory
2	-	2

Assessment Guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	15	20	40	075

The assessment/evaluation guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to decide her/his assessment methodology based on the nature of the course. Faculty may propose the revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Unit No.	Contents	Hrs.
1		Foundations of Text Analytics	6
	1.1	Tokenization Splitting text into words, phrases, or symbols (tokens) using tools like spaCy or NLTK. Normalization Standardizing text (lowercasing, stemming/lemmatization) and removing noise (stop words, punctuation). Vectorization Converting text to numerical features (TF-IDF, Word2Vec, BERT embeddings) for model input.	
	1.2	Entity Identification Detecting and classifying entities (e.g., persons, organizations) using rule-based or ML models (spaCy, BERT). Entity Linking Connecting entities to knowledge bases (e.g., Wikipedia) for context (DBpedia, Wikidata).	
2		Text Intelligence	04
	2.1	NLP Pipelines: Workflows for text classification, summarization	
	2.2	Transformers: Fine-tuning LLMs, prompt engineering	
	2.3	Bias Mitigation: Statistical parity testing, adversarial debiasing, inclusive dataset design	
3		Web Analytics	06
	3.1	Web Basics: Types of Tags ,tools	
	3.2	Web Scraping: Tools ,Ethics and Challenges	
	3.3	A/B Testing: Comparison of Web page variance with statistical testing	
4		Social Media Mining:	04
	4.1	Introduction, Challenges, Types of social Network Graphs	
	4.2	Mining Social Media: Influence and Homophily, Behavior Analytics, Recommendation in Social Media: Challenges, Classical recommendation Algorithms, Recommendation	
5		Social Media Analytics	06
	5.1	Social data collection and Cleaning	
	5.2	Sentiment and Trend Analysis	
	5.3	Network and Influence mapping	
6		Ethics and Deployment	04
	6.1	Explainability methods (SHAP, LIME) for text/models	
	6.2	Mitigating bias in recommendations/sentiment models Ethical AI frameworks	
	6.3	Monitoring for drift/decay (e.g., sentiment model accuracy drops)	
	6.4	Feedback loops for continuous improvement

Course Name: Text, Web and Social Media Analytics Lab

Course Code: PEEC22P

Category: Programme Elective Course

Preamble:

The Text, Web and Social Media Analytics Laboratory lab focuses on developing technical proficiency in processing large-scale textual and social media data, enabling students to extract meaningful patterns, trends, and intelligence. Students will engage in tasks such as scraping web data, analyzing social media sentiment, detecting fake news, building chatbots, and visualizing network interactions. By working with real datasets from platforms like Twitter, Reddit, news websites, and e-commerce reviews, learners will gain experience in cleaning, preprocessing, and modeling unstructured data.

Pre-requisite:

- Basic knowledge of Python programming
- Understanding of Data Mining
- Familiarity with Machine Learning concepts

Course Objectives:

- Applying NLP techniques (tokenization, NER, topic modeling) to real-world text data.
- Using APIs and web scraping tools to collect data from dynamic web sources.
- Implementing machine learning models for classification, clustering, and prediction tasks.
- Exploring ethical considerations in data privacy, bias, and responsible AI usage.

Course Outcomes:

CO1: Implement text preprocessing and entity recognition pipelines to transform unstructured data into structured formats.

CO2: Evaluate web data extraction methods and statistical tests to derive actionable insights from digital content.

CO3: Assess social media patterns using network theory and time-series analysis to measure influence and trends.

CO4: Design and deploy responsible AI systems with bias mitigation, explainability, and monitoring capabilities.

12	6	ChatGPT-Style Content Moderator	LLM fine-tuning, Ethical guidelines	Hugging Face, OpenAI API	CO5, CO6

Course Name: Industrial Internet of Things

Course Code: PEEC23T

Category: Programme Elective Course

Preamble:

This course introduces students to IIoT complexity on a scale previously unseen in the software industry. Software architecture must accommodate these heterogeneous domains and competencies and handle the increasing levels of complexity. The IIoT generates large amounts of data that is subsequently stored, analyzed, archived and eventually fed back into the product life cycle.

Pre-requisites:

- Modern Sensor Technology for IoT
- Principles of IoT

Course Objectives:

- To understand the concepts of Industry 4.0 and IIoT.
- To learn the reference architecture of IIoT
- To learn industrial data acquisition and transmission
- To learn the IIoT key technologies.
- To learn securities in IIoT.
- To learn application areas in IIoT.

Course Outcomes:

Students will be able to:

CO1: Understand the fundamentals of Industry 4.0 and IIoT.

CO2: Understand different types of architecture required in the IIoT applications.

CO3: Apply knowledge of data acquisition and transmission techniques required in IIoT.

CO4: Understand Key technologies required in the implementation of IIoT model.

CO5: Create a security system for IIoT application.

CO6: Design prototype model of IIoT system.

Assessment Guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	15	20	40	075

The assessment guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module no	Module name	Content	No of Hours
1	Introduction	Overview of Industry 4.0 and Industrial Internet of Things, Industrial Internet, Design requirements of Industry 4.0, Drivers of Industry 4.0, Sustainability Assessment of Industries, Smart Business Perspective, Basics, IIOT and Industry 4.0, Industrial Internet Systems, Industrial Sensing, Industrial Processes, IIOT Challenges – Identifying Things within the internet, Discovering Things and the Data they possess, Managing massive amount of data, Navigating Connectivity Outages, IIOT Edge - Leveraging the Power of Cloud Computing, Communicating with Devices on the Edge, Determining a Request/Response Model	4
2	IIOT Reference Architecture	The IIC Industrial Internet Reference Architecture - Industrial Internet Architecture Framework (IIAF), Industrial Internet Viewpoints. The Three-Tier Topology, Key Functional Characteristics of Connectivity. Software Architectural Style for the Industrial Internet of Things. Challenges of Software Engineering in IIoT, Principles for Software Architecture design in IIoT, The Principled Decomposition, and The Architectural Style.	5
3	IIoT data acquisition and transmission	Introduction, Features and Components of - Foundation Fieldbus, Profibus, HART, Interbus, Bitbus, CC-Link, Modbus, Batibus, DigitalSTROM, Controller Area Network, DeviceNet, LonWorks, ISA 100.11a, Wireless HART, LoRa and LoRaWAN) NB-IoT, IEEE 802.11AH, Distributed Control System, PLC, SCADA	6
4	Key Technologies in IIoT	Off-Site Technologies: Cloud Computing in IIOT Fog Computing: Principles, Architectures, and Applications. On-Site Technologies: Big Data and Advanced Analytics	5
5	IIoT securities	Securing the Industrial Internet- Security in Manufacturing, PLCs and DCS, Securing the OT (Operation Technology), Network, System Level: Potential Security Issues, Identity Access Management. Internet of Things (IoT) Cyber security Improvement Act of 2017, Other governmental bodies, IoT security best practices, Holistic security. The IoT Security Lifecycle	6
6	IIoT Applications	Develop New Business Models : Adopt Smart Architectures and Technologies, Sensor-Driven Computing, Industrial Analytics, Intelligent Machine Applications, Transform the Workforce. Inventory Management and Quality Control: Introduction, Inventory Management and IIOT, Quality Control Case Studies: Manufacturing Industry, Automotive Industry and Mining Industry, Healthcare Applications in Industries, Challenges associated with Healthcare	4

Course Name: Industrial Internet of Things Laboratory

Course Code: PEEC23P

Category: Programme Elective Course

Preamble:

The IIoT Lab is a hands-on learning environment where you will gain practical experience in designing, developing, and deploying IIoT solutions. By the end of this lab, students will have a strong foundation in IIoT concepts and be prepared to apply your knowledge to real-world industrial applications.

Pre-requisites:

- Modern Sensor Technology for IoT
- Principles of IoT

Course Objectives:

- Familiarize students with the fundamentals of Industrial IoT (IIoT)
- Understand the core concepts of IIoT, including sensors, actuators, communication protocols, and data analytics
- Gain insights into the applications of IIoT in various industries
- Develop the skills necessary to design and implement IIoT solutions

Course Outcomes:

Student will be able to:

CO1: Learn IIoT and its key components

CO2: Study and interface the different types of sensors and actuators used in IIoT applications

CO3: Analyze the various communication protocols used in IIoT

CO4: Analyze and interpret data collected from IIoT devices

CO5: Design and implement simple IIoT solutions

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
-	2	-	1

Assessment Scheme:

Head	ISA	MSA	ESA	Total
Practical	25	-	25	050

Suggested List of Practical:

- 1) **Familiarization with Development Boards:** This experiment will get students familiar with popular development boards like Arduino Uno or Raspberry Pi. Students will learn how to set up the board, install the necessary software, and write simple programs to control LEDs, read sensor data, and control actuators.
- 2) **Sensor Interfacing:** This experiment will introduce students to various sensors used in IIoT applications, such as temperature sensors, humidity sensors, light sensors, and pressure sensors. Students will learn how to interface these sensors with the development board and read the sensor data.
- 3) **Actuator Control:** This experiment will introduce students to actuators used in IIoT applications, such as relays, motors, and solenoids. Students will learn how to control these actuators using the development board based on sensor readings or user input.
- 4) **Data Visualization:** This experiment will teach students how to visualize the data collected from sensors. Students will use software tools to plot the data on graphs and charts, allowing for easier monitoring and analysis.
- 5) **Communication Protocols:** This experiment will cover various communication protocols used in IIoT, such as Modbus, Profibus, and MQTT. Students will learn how to configure these protocols for communication between devices and the cloud platform.
- 6) **Cloud Integration:** This experiment will introduce students to cloud platforms for IIoT applications. Students will learn how to connect their IIoT devices to the cloud platform, send sensor data to the cloud, and receive commands from the cloud.
- 7) **Remote Monitoring and Control:** This experiment will build on the previous experiments by creating a system where students can remotely monitor sensor data and control actuators over the internet.
- 8) **Data Analytics:** This experiment will introduce students to basic data analytics techniques used in IIoT applications. Students will learn how to analyze sensor data to identify trends, patterns, and anomalies.
- 9) Robotics arms and Industry 4.0 Setup

Course Name: Mixed Signal VLSI Design

Course Code: PEEC24T

Category: Programme Elective Course

Preamble:

In the era of highly integrated electronic systems, the convergence of analog and digital circuitry on a single chip, commonly referred to as Mixed Signal VLSI Design, plays a critical role in enabling advanced functionalities across a range of applications, from communication systems to biomedical devices. This subject introduces students to the principles, methodologies, and design techniques essential for developing integrated circuits that process both analog and digital signals. It emphasizes the challenges of noise, signal integrity, power consumption, and layout intricacies, while also addressing current trends such as data converters (ADC/DAC), PLLs, and mixed-signal SoCs. Through a combination of theoretical learning and practical design experience, students will be equipped to tackle real-world mixed-signal VLSI design challenges and contribute effectively to the semiconductor industry.

Pre-requisite:

1. Basics of VLSI Design
2. Digital System Design
3. Advanced VLSI Design
4. Analog IC Design

Course Objectives:

1. Introduce the fundamentals of mixed signal VLSI design flow, CMOS technology, and layout challenges in integrated analog-digital systems.
2. Understand and evaluate key performance specifications and error sources in DAC and ADC systems.
3. Analyze and compare various DAC and ADC architectures and their practical implementation aspects.
4. Explore the design and operation of switched capacitor circuits, including sampling techniques and amplifier configurations.
5. Study the principles, types, and applications of oscillators and PLLs in mixed-signal integrated circuits.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Explain the mixed-signal VLSI design flow and identify key layout challenges specific to analog-digital integration.

CO2: Evaluate performance specifications of DACs and ADCs and assess their impact on signal integrity.

CO3: Compare different data converter architectures and determine their suitability for various applications.

CO4: Design and simulate switched capacitor circuits for amplification and integration tasks.

CO5: Analyze oscillator and PLL designs and their applications in modern communication and clock systems.

Module No.	Unit No.	Contents	Hrs.
1		Introduction to Mixed Signal VLSI	06
	1.1	Overview of Mixed Signal VLSI Design Flow, CMOS Technology Overview (Analog & Digital), Need for Mixed Signal ICs	
	1.2	Mixed Signal Layout issues like, floor planning, power supply and ground issues, fully differential design, guard rings, shielding, interconnect considerations	
2		Data Converter Fundamentals	06
	2.1	DAC Specifications: Differential Non-linearity, Integral Non-linearity, Offset, Gain Error, Latency, Signal to Noise Ratio (SNR), Dynamic Range	
	2.3	ADC Specifications: Quantization Error, Differential Non-linearity, missing codes, Integral Non-linearity, Offset, Gain Error, aliasing, Signal to Noise aperture error	
3		Data Converter Architectures	06
	3.1	DAC architectures: Digital input code, Resistor String and mismatch errors, R-2R ladder network, Current steering DAC, Charge scaling DACs, Cyclic DAC, Pipeline DAC	
	3.2	ADC architectures: Flash ADC, two step Flash ADC, Pipeline ADC, Integrating ADC, and Successive approximation ADC	
4		Switched Capacitor Circuits	06
	4.1	General Considerations Sampling Switches: MOSFETs as switches, Speed considerations, Precision Considerations, Charge injection cancellation.	
	4.2	Switched Capacitor Amplifier: Unity gain buffer, non-inverting amplifier and precision multiply by two circuits. Switched Capacitor Integrator & Switched Capacitor Common Mode Feedback	
5		Oscillators and Phase Locked Loops	06
	5.1	Oscillators: General considerations, Ring oscillators, LC oscillators, VCO	

	5.2	Phase locked loops: Simple PLL, Charge pump PLL, Non-ideal effects in PLL, Delay locked loops and applications of PLL in integrated circuits

Course Name: Mixed Signal VLSI Design Lab

Course Code: PEEEC24P

Category: Programme Elective Course

Preamble:

The Mixed Signal VLSI Design Lab provides hands-on experience in designing, simulating, and analyzing circuits that integrate both analog and digital components on a single chip. This lab complements theoretical learning by enabling students to implement and verify key mixed-signal building blocks such as data converters, switched capacitor circuits, oscillators, and PLLs using industry-standard EDA tools. Through practical exposure to circuit-level design, layout, and verification, students will develop the skills necessary to address real-world design challenges in the semiconductor industry. The lab also fosters problem-solving, critical thinking, and design optimization techniques, preparing students for advanced work in mixed-signal integrated circuit design.

Pre-requisite:

1. Basics of VLSI Design
2. Digital System Design
3. Advanced VLSI Design
4. Analog IC Design

Course Objectives:

1. Introduce the fundamentals of mixed signal VLSI design flow, CMOS technology, and layout challenges in integrated analog-digital systems.
2. Understand and evaluate key performance specifications and error sources in DAC and ADC systems.
3. Analyze and compare various DAC and ADC architectures and their practical implementation aspects.
4. Explore the design and operation of switched capacitor circuits, including sampling techniques and amplifier configurations.
5. Study the principles, types, and applications of oscillators and PLLs in mixed-signal integrated circuits.

Course Outcomes:

After successful completion of the course students will be able to:

CO1: Explain the mixed-signal VLSI design flow and identify key layout challenges specific to analog-digital integration.

CO2: Evaluate performance specifications of DACs and ADCs and assess their impact on signal integrity.

CO3: Compare different data converter architectures and determine their suitability for various applications.

CO4: Design and simulate switched capacitor circuits for amplification and integration tasks.

CO5: Analyze oscillator and PLL designs and their applications in modern communication and clock systems.

Suggested list of Practical:

Practical No.	Module No.	Suggested list of Experiments	Topics to be highlighted	CO Map
1	1	Design Flow Demonstration	Implement a simple mixed-signal design using a standard EDA tool (e.g., Cadence). Demonstrate the steps: schematic, simulation, layout, and verification	CO1
2	1	CMOS Inverter Analysis	Simulate analog and digital characteristics (rise/fall time, noise margin) of a CMOS inverter.	CO1
3	1	Layout of Differential Pair with Guard Ring	Design and layout of differential pair circuits, incorporating guard rings and proper floor planning practices.	CO1
4	2	DAC Linearity Analysis	Simulate a simple R-2R ladder DAC and measure parameters like DNL and INL using a testbench.	CO2
5	2	ADC Quantization Noise Study	Implement a basic SAR ADC model and analyze quantization noise and SNR with different input signals.	CO2
6	2	Error Analysis in Converters	Simulate the effect of offset and gain errors in DAC and compare with theoretical expectations.	CO2
7	3	Design of 4-bit Flash ADC	Implement and simulate a Flash ADC using comparators and resistor ladders; test speed and accuracy.	CO3
8	3	SAR ADC Design and Timing Simulation	Design a SAR logic and capacitor array for a SAR ADC and simulate conversion timing.	CO3

Practical No.	Module No.	Suggested list of Experiments	Topics to be highlighted	CO Map
9	3	Pipeline DAC Simulation	Create a simple pipeline DAC architecture in SPICE or Verilog-A and analyze output behavior.	CO3
10	4	MOSFET Switch Behavior	Simulate a MOSFET as a sampling switch under different frequencies and analyze charge injection.	CO4
11	4	Switched Capacitor Integrator	Design and simulate an SC integrator and measure output for sinusoidal and step inputs.	CO4
12	4	Switched Capacitor Amplifier	Implement a non-inverting SC amplifier and observe gain stability and precision behavior.	CO4
13	5	Ring Oscillator Design	Design a 3-stage ring oscillator and observe frequency behavior with varying supply voltages and transistor sizes.	CO5
14	5	VCO Design and Simulation	Create a Voltage-Controlled Oscillator (VCO) and simulate its frequency tuning range.	CO5
15	5	PLL Modeling	Simulate a basic Charge Pump PLL in MATLAB or Verilog-A; study lock-in behavior and phase noise.	CO5

Detailed Syllabus of Open Elective Courses

Course Name: Cyber Law

Course Code: OE21

Category: Open Elective

Preamble:

This course explores the evolving landscape of cyber law and security, equipping students with legal frameworks and technology insights necessary to navigate the challenges posed by digital crimes. It emphasizes both technical and legal aspects of cybersecurity, with a focus on Information Technology Act, 2000 (ITA 2000) and the amendments in the Information Technology Amendment Act, 2008 (ITAA 2008).

Pre-requisites: Nil

Course Objectives:

- To introduce students to the legal framework governing cyber activities, with a focus on ITA 2000 and ITAA 2008.
- To understand the technical foundations of cybersecurity and the role of various security mechanisms in preventing cyber threats.
- To explore different types of cybercrimes and the processes involved in investigating and addressing them.
- To examine the legal aspects of e-commerce, e-governance, and the use of electronic signatures in Indian law.
- To analyse the importance of privacy, data protection, and how international laws influence Indian regulations.
- To provide a global perspective on cyber law and international conventions, addressing challenges like intellectual property and cyber warfare.

Course Outcomes:

Student will be able to:

CO1: Explain the key provisions of ITA 2000 and ITAA 2008 and their impact on various legal domains.

CO2: Gain practical knowledge of cybersecurity tools and techniques such as encryption, firewalls, and digital signatures.

CO3: Identify different types of cybercrimes and apply forensic techniques to investigate digital crimes.

CO4: Assess the legal implications of e-commerce, e-governance, and electronic contracts in India.

CO5: Analyze privacy and data protection laws in India and evaluate them from an international perspective.

CO6: Understand global cyber law frameworks and how international treaties impact the regulation of cyberspace in India.

Course Scheme:

Course Name: Project Management

Course Code: OE22

Category: Open Elective

Preamble:

This course discusses tools that any organization can use to improve its ability to plan, implement, and control its activities as well as the ways in which it utilizes its people and resources.

Pre-requisites: Nil

Course Objectives:

- To familiarize the students with the use of a structured methodology/approach for each and every unique project undertaken, including utilizing project management concepts, tools and techniques.
- To appraise the students with the project management life cycle and make them knowledgeable about the various phases from project initiation through closure.

Course Outcomes:

Student will be able to:

CO1. Apply selection criteria and select an appropriate project from different options.

CO2. Write work break down structure for a project and develop a schedule based on it.

CO3. Identify opportunities and threats to the project and decide an approach to deal with them strategically.

CO4. Use Earned value technique, determine & predict status of the project. CO5. Capture lessons learned during project phases and document them for future reference

Detailed Syllabus:

Module no	Module name	Content	No of Hours
1	Project Management Foundation	Definition of a project, Project Vs Operations, Necessity of project management, Triple constraints, Project life cycles (typical & atypical) Project phases and stage gate process. Role of project manager. Negotiations and resolving conflicts. Project management in various organization structures. PM knowledge areas as per Project Management Institute (PMI).	4
2	Initiating Projects	How to get a project started, selecting project strategically, Project selection models (Numeric /Scoring Models and Non-numeric models), Project portfolio process, Project sponsor and creating charter, Project proposal. Effective project team, Stages of team development & growth (forming, storming, norming & performing), team dynamics.	5
3	Project Planning and Scheduling	Work Breakdown structure (WBS) and linear responsibility chart, Interface Co-ordination and concurrent engineering, Project cost estimation and budgeting, Top down and bottoms up budgeting, Networking and Scheduling techniques. PERT, CPM, GANTT chart. Introduction to Project Management Information System (PMIS)	5
4	Planning Projects	Crashing project time, Resource loading and levelling, Goldratt's critical chain, Project Stakeholders and Communication plan. Risk Management in projects: Risk management planning, Risk identification and risk register. Qualitative and quantitative risk assessment, Probability and impact matrix. Risk response strategies for positive and negative risks	5
5	Executing Projects, Monitoring and Controlling Projects and Project Contracting	Executing Projects: Planning monitoring and controlling cycle. Information needs and reporting, engaging with all stakeholders of the projects. Team management, communication and project meetings. Monitoring and Controlling Projects: Earned Value Management techniques for measuring value of work completed; Using milestones for measurement; change requests and scope creep. Project audit. Project Contracting: Project procurement management, contracting and outsourcing	6
6	Project Leadership and Ethics Closing the Project	Project Leadership and Ethics: Introduction to project leadership, ethics in projects. Multicultural and virtual projects. Closing the Project: Customer acceptance; Reasons of project termination, Various types of project terminations (Extinction, Addition, Integration, Starvation), Process	5

		of project termination, completing a final report; doing a lesson learned analysis; acknowledging successes and failures; Project management templates and other resources; Managing without authority; Areas of further study

Course Name: Product Life Cycle Management

Course Code: OE23

Category: Open Elective

Preamble:

This course aims to give students an overview of product Life Cycle Management (PLM) which is a strategic approach to managing the entire lifecycle of a product, from its inception through design, manufacturing, deployment, and disposal. This course gives student insights on various aspects such as PLM Strategies, Product design, Product Data Management, Virtual Product Development Tools, Integration of Environmental Aspects in Product Design, Life Cycle Assessment and Life Cycle Cost Analysis

Pre-requisites: Nil

Course Objective:

- To familiarize the students with the need, benefits and components of PLM
- To acquaint students with Product Data Management & PLM strategies
- To give insights into new product development program and guidelines for designing and developing a product
- To familiarize the students with Virtual Product Development

Course Outcomes:

Students will be able to:

CO1: Gain knowledge about phases of PLM, PLM strategies and methodology for PLM feasibility study and PDM implementation.

CO2: Illustrate various approaches and techniques for designing and developing products.

CO3: Apply product engineering guidelines / thumb rules in designing products for molding, machining, sheet metal working etc.

CO4: Acquire knowledge in applying virtual product development tools for components, machining and manufacturing plant

Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
2	-	2	-

Assessment Guidelines:

Head	ISA	MSA	ESA	Total
Theory	15	20	40	075

The assessment/evaluation guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to decide her/his assessment methodology based on the nature of the course. Faculty may propose a revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Introduction to Product Lifecycle Management and PLM Strategies	Introduction to Product Lifecycle Management (PLM): Product Lifecycle Management (PLM), Need for PLM, Product Lifecycle Phases, Opportunities of Globalization, Pre-PLM Environment, PLM Paradigm, Importance & Benefits of PLM, Widespread Impact of PLM, Focus and Application, A PLM Project, Starting the PLM Initiative, PLM Applications PLM Strategies: Industrial strategies, Strategy elements, its identification, selection and implementation, Developing PLM Vision and PLM Strategy, Change management for PLM	6
2	Product Design	Product Design: Product Design and Development Process, Engineering Design, Organization and Decomposition in Product Design, Typologies of Design Process Models, Reference Model, Product Design in the Context of the Product Development Process, Relation with the Development Process Planning Phase, Relation with the Post design Planning Phase, Methodological Evolution in Product Design, Concurrent Engineering, Characteristic Features of Concurrent Engineering, Concurrent Engineering. and Life Cycle Approach, New Product Development (NPD) and Strategies, Product Configuration and Variant Management, The Design for X System, Objective Properties and Design for X Tools, Choice of Design for X Tools and Their Use in the Design Process	6
3	Product Data Management (PDM)	Product Data Management (PDM): Product and Product Data, PDM systems and importance, Components of PDM, Reason for implementing a PDM system, financial justification of PDM, barriers to PDM implementation	4
4	Virtual Product Development Tools	Virtual Product Development Tools: For components, machines, and manufacturing plants, 3D CAD systems and realistic rendering techniques, Digital mock-up, Model building, Model analysis, Modeling and simulations in Product Design, Examples/Case Studies	5
5	Integration of Environmental Aspects in Product Design	Integration of Environmental Aspects in Product Design: Sustainable Development, Design for Environment, Need for Life Cycle Environmental Strategies, Useful Life Extension Strategies, End-of- Life Strategies, Introduction of Environmental Strategies	5

		into the Design Process, Life Cycle Environmental Strategies and Considerations for Product Design	
6	Life Cycle Assessment and Life Cycle Cost Analysis	Life Cycle Assessment and Life Cycle Cost Analysis: Properties, and Framework of Life Cycle Assessment, Phases of LCA in ISO Standards, Fields of Application and Limitations of Life Cycle Assessment, Cost Analysis and the Life Cycle Approach, General Framework for LCCA, Evolution of Models for Product Life Cycle Cost Analysis	4

Course Name: Sustainability Management

Course Code: OE24

Category: Open Elective

Preamble:

To provide learners with a comprehensive understanding of sustainability principles, strategies, and management practices that enable organizations to operate responsibly while achieving long-term success.

Pre-requisites: Nil

Course Objectives:

- To provide a comprehensive understanding of sustainability concepts and their importance in global and organizational contexts.
- To equip participants with the tools and frameworks to develop and implement effective sustainability strategies.
- To foster the ability to analyze environmental, social, and economic impacts and propose practical solutions.
- To empower learners to lead and manage sustainable practices through innovation, technology, and ethical decision-making.

Course Outcomes:

Learner will be able to:

CO1: Understand the Core Principles of Sustainability: Comprehend the key environmental, social, and economic dimensions of sustainability

CO2: Analyze Environmental Impacts: Evaluate organizational and societal environmental footprints and recommend sustainable practices.

CO3: Develop Strategies for Social and Economic Sustainability: Formulate strategies that address social equity, community engagement, and economic resilience.

CO4: Implement Sustainability Practices: Design and implement sustainability strategies within an organizational context, including reporting and stakeholder management.

CO5: Leverage Technology and Innovation: Utilize emerging technologies to enhance sustainability outcomes.

CO6: Lead and Manage Change: Apply leadership and change management principles to foster a sustainability-focused culture.

Course Scheme:

However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Introduction to Sustainability	Overview of Sustainability: Definition, history, and importance. Sustainable Development Goals (SDGs): UN's 2030 Agenda and its impact on global development. Three Pillars of Sustainability: Environmental, social, and economic dimensions. Current Challenges: Climate change, resource depletion, inequality, and global initiatives.	5
2	Environmental Sustainability	Understanding Environmental Impact: Carbon footprint, waste management, and biodiversity. Energy Management: Renewable energy sources, energy efficiency, and innovations in energy systems. Circular Economy: Concepts, examples, and transitioning to closed-loop systems. Sustainable Resource Management: Water, minerals, and sustainable agriculture.	6
3	Social Sustainability	Social Equity and Inclusion: Addressing diversity, equity, and inclusion in organizations. Community Engagement: Building partnerships and contributing to societal development. Labor Practices: Ethical employment practices, health, and safety. Corporate Social Responsibility (CSR): Importance, frameworks, and success stories.	6
4	Economic Sustainability	Sustainable Business Practices: Triple bottom line approach. Green Finance: ESG investing, green bonds, and carbon pricing. Sustainable Innovation: Developing products and services that align with sustainability goals. Regulatory Frameworks: Policies and standards for sustainable business operations.	5
5	Sustainability Strategy & Implementation	Developing a Sustainability Strategy: Key steps and tools. Stakeholder Engagement: Identifying and collaborating with key stakeholders. Sustainability Reporting: Standards (GRI, SASB), metrics, and case studies. Measuring Impact: Life cycle assessment (LCA), carbon accounting, and sustainability indicators.	5
6	Technology and Innovation for Sustainability	Digital Transformation: Role of AI, IoT, and big data in achieving sustainability. Green Technologies: Innovations in clean energy, transportation, and waste management. Smart Cities: Integration of sustainable technologies	4

		in urban planning. Role of Blockchain: Transparency and traceability in sustainability practices.	
7	Leadership and Change Management in Sustainability	Sustainability Leadership: Characteristics and examples of successful leaders. Driving Organizational Change: Overcoming resistance and fostering a sustainability culture. Ethical Decision Making: Frameworks for responsible leadership. Global Case Studies: Examining successful implementations of sustainability initiatives.	4

Course Name: Operations Research

Course Code: OE25

Category: Open Elective

Preamble:

This course discusses various tools in scientific management.

Pre-requisites: Nil

Course Objectives:

- Formulate a real-world problem as a mathematical programming model.
- Understand the mathematical tools that are needed to solve optimization problems.
- Use mathematical software to solve the proposed models.

Course Outcomes:

Learner will be able to...

CO1. Understand the theoretical workings of the simplex method, the relationship between a linear program and its dual, including strong duality and complementary slackness.

CO2. Perform sensitivity analysis to determine the direction and magnitude of change of a model's optimal solution as the data change.

CO3. Solve specialized linear programming problems like the transportation and assignment problems, solve network models like the shortest path, minimum spanning tree, and maximum flow problems.

CO4. Understand the applications of integer programming and a queuing model and compute important performance measures

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Introduction to Operations Research	Introduction to Operations Research: Introduction, Structure of the Mathematical Model, Limitations of Operations Research Linear Programming: Introduction, Linear Programming Problem, Requirements of LPP, Mathematical Formulation of LPP, Graphical method, Simplex Method Penalty Cost Method or Big M-method, Two Phase Method, Revised simplex method, Duality, Primal – Dual construction, Symmetric and Asymmetric Dual, Weak Duality Theorem, Complimentary Slackness Theorem, Main Duality Theorem, Dual Simplex Method, Sensitivity Analysis Transportation Problem: Formulation, solution, unbalanced Transportation problem. Finding basic feasible solutions – Northwest corner rule, least cost method and Vogel's approximation method. Optimality test: the steppingstone method and MODI method. Assignment Problem: Introduction, Mathematical Formulation of the Problem, Hungarian Method Algorithm, Processing of n Jobs Through Two Machines and Machines, Graphical Method of Two Jobs m Machines Problem Routing Problem, Travelling Salesman Problem Integer Programming Problem: Introduction, Types of Integer Programming Problems, Gomory's cutting plane Algorithm, Branch and Bound Technique. Introduction to Decomposition algorithms.	9
2	Queuing models	Queuing models: queuing systems and structures, single server and multi-server models, Poisson input, exponential service, constant rate service, finite and infinite population	5
3	Simulation	Simulation: Introduction, Methodology of Simulation, Basic Concepts, Simulation Procedure, Application of Simulation Monte-Carlo Method: Introduction, Monte-Carlo Simulation, Applications of Simulation, Advantages of Simulation, Limitations of Simulation	4
4	Dynamic programming	Dynamic programming. Characteristics of dynamic programming. Dynamic programming approach for	4

		Priority Management employment smoothening, capital budgeting, Stagecoach/Shortest Path, cargo loading and Reliability problems.	
5	Game Theory	Game Theory. Competitive games, rectangular game, saddle point, minimax (maximin) method of optimal strategies, value of the game. Solution of games with saddle points, dominance principle. Rectangular games without saddle point – mixed strategy for 2 X 2 games.	4
6	Inventory Models	Inventory Models: Classical EOQ Models, EOQ Model with Price Breaks, EOQ with Shortage, Probabilistic EOQ Model,	4

Course Name: IPR and Patenting

Course Code: OE26

Category: Open Elective

Preamble:

This course discusses legal rights that can be registered with a legal authority in some presentable or tangible form which can be sold or bought or licensed, like physical property given to creator or innovator to harvest the economic benefits on their invention or creation.

Pre-requisites: Nil

Course Objectives:

- To understand intellectual property rights protection system
- To promote the knowledge of Intellectual Property Laws of India as well as international treaty procedures
- To get acquaintance with Patent search and patent filing procedure and applications

Course Outcomes:

Learner will be able to...

CO1: Understand Intellectual Property assets

CO2: Assist individuals and organizations in capacity building

CO3: Work for development, promotion, protection, compliance, and enforcement of Intellectual Property and Patenting

Course Scheme:

However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Introduction to Intellectual Property Rights (IPR):	Meaning of IPR, Different category of IPR instruments - Patents, Trademarks, Copyrights, Industrial Designs, Plant variety protection, Geographical indications, Transfer of technology etc. Importance of IPR in Modern Global Economic Environment: Theories of IPR, Philosophical aspects of IPR laws, Need for IPR, IPR as an instrument of development	4
2	Enforcement of Intellectual Property Rights:	Introduction, Magnitude of problem, Factors that create and sustain counterfeiting/piracy, international agreements, International organizations (e.g. WIPO, WTO) active in IPR enforcement Indian Scenario of IPR: Introduction, History of IPR in India, Overview of IP laws in India, Indian IPR, Administrative Machinery, Major international treaties signed by India, Procedure for submitting patent and Enforcement of IPR at national level etc.	6
3	Emerging Issues in IPR:	Challenges for IP in digital economy, e-commerce, human genome, biodiversity and traditional knowledge etc	5
4	Basics of Patents:	Definition of Patents, Conditions of patentability, Patentable and nonpatentable inventions, Types of patent applications (e.g. Patent of addition etc), Process Patent and Product Patent, Precautions while patenting, Patent specification Patent claims, Disclosures and non-disclosures, Patent rights and infringement, Method of getting a patent	5
5	Patent Rules:	Indian patent act, European scenario, US scenario, Australia scenario, Japan scenario, Chinese scenario, Multilateral treaties where India is a member (TRIPS agreement, Paris convention etc.)	5
6	Procedure for Filing a Patent (National and International):	Legislation and Salient Features, Patent Search, Drafting and Filing Patent Applications, Processing of patent, Patent Litigation, Patent Publication etc, Time frame and cost, Patent Licensing, Patent Infringement Patent databases: Important websites, Searching international databases	5

Course Name: Research Methodology

Course Code: OE27

Category: Oen Elective

Preamble:

This course offers "An overview of research methodology including basic concepts employed in quantitative and qualitative research methods. Includes computer applications for research.

Pre-requisites: Nil

Course Objectives:

- To understand Research and Research Process
- To acquaint students with identifying problems for research and develop research strategies
- To familiarize students with the techniques of data collection, analysis of data and interpretation

Course Outcomes:

Students will be able to:

CO1: Demonstrate the ability to choose methods appropriate to research aims and objectives

CO2: Understand the limitations of particular research methods

CO3: Develop skills in qualitative and quantitative data analysis and presentation

CO4: Develop advanced critical thinking skills

CO5: Demonstrate enhanced writing skills

Course: Renewable Energy Management

Category: Open Elective

Course Code: OE28

Preamble:

Renewable Energy Management focuses on the development, implementation, and management of renewable energy projects. This course aims to equip students with the knowledge and skills required to effectively manage renewable energy resources, assess their impact, and implement sustainable energy solutions. The curriculum covers various renewable energy technologies, their applications, and the economic, environmental, and policy aspects of renewable energy systems.

Pre-requisites: Nil

Course Outcomes:

CO1: Understand the principles and technologies of various renewable energy sources.

CO2: Analyse the economic, environmental, and social impacts of renewable energy projects.

CO3: Evaluate and design renewable energy systems for specific applications.

CO4: Develop strategies for the integration and management of renewable energy in the energy mix.

CO5: Understand the policies, regulations, and incentives related to renewable energy.

CO6: Gain practical skills in renewable energy project planning, implementation, and management.

Course Scheme:

Detailed Syllabus:

Mod No.	Module Name	Content	No. of hrs.
1	Introduction to Renewable Energy	- Overview of global and national energy scenarios - Importance and benefits of renewable energy - Types of renewable energy sources: solar, wind, biomass, hydro, and geothermal - Comparison between renewable and non-renewable energy	4

		Current trends and future prospects in renewable energy	
2	Solar Thermal Energy	- Principles of solar thermal energy conversion - Solar collectors: flat plate, evacuated tube, and concentrating collectors - Solar thermal applications: water heating, space heating, and industrial processes - Solar thermal power plants: parabolic troughs, solar towers, and dish Stirling systems - Economic and environmental aspects of solar thermal energy	4
3	Solar Photovoltaics	- Principles of photovoltaic energy conversion - Types of photovoltaic cells: monocrystalline, polycrystalline, and thin film - Design and components of photovoltaic systems: modules, inverters, and batteries - Performance analysis of PV systems: efficiency, shading, and temperature effects - Grid integration and energy storage for PV systems	4
4	Wind Energy	- Fundamentals of wind energy conversion - Wind turbine types, components, and operation - Wind farm design and site selection - Environmental and social impacts of wind energy projects - Economic analysis and policy considerations for wind energy	6
5	Biomass, Hydro and Geothermal Energy	- Biomass & Bio Energy - Biomass resources and conversion technologies - Bioenergy production: biogas, biofuels, and biomass power generation - Waste-to-energy systems - Environmental and economic aspects of bioenergy - Policies and incentives for bioenergy development - Hydro Energy - Principles of hydro power generation - Small-scale and large-scale hydro power plants - Geothermal Energy - Geothermal energy resources and extraction methods - Applications and challenges of geothermal energy - Environmental and economic considerations for hydro and geothermal energy	6
6	Renewable Energy and Management Policy	- Energy management principles and practices - Renewable energy project planning and management - Integration of renewable energy into the grid - Policies, regulations, and incentives for renewable energy - Case studies of successful renewable energy projects	6

Course Name: Energy Audit and Management

Course Code: OE29

Category: Open Elective

Preamble:

Energy Audit is a systematic approach for decision-making in energy management to balance the total energy inputs with its use. The objective of Energy Management is to achieve and maintain optimum energy procurement and utilisation to minimise energy costs/waste without affecting production & quality with minimum environmental effects.

Pre-requisites: Nil

Course Objectives:

- To understand the importance energy security for sustainable development and the fundamentals of energy conservation.
- To introduce performance evaluation criteria of various electrical and thermal installations to facilitate the energy management
- To relate the data collected during performance evaluation of systems for identification of energy saving opportunities.

Course Outcomes:

Student will be able to:

CO1. To identify and describe present state of energy security and its importance.

CO2. To identify and describe the basic principles and methodologies adopted in energy audit of an utility.

CO3. To describe the energy performance evaluation of some common electrical installations and identify the energy saving opportunities.

CO4. To describe the energy performance evaluation of some common thermal installations and identify the energy saving opportunities

CO5. To analyse the data collected during performance evaluation and recommend energy saving measures

Detailed Syllabus:

Module no	Module name	Content	No of Hours
1	Energy Scenario	Present Energy Scenario, Energy Pricing, Energy Sector Reforms, Energy Security, Energy Conservation and its Importance, Energy Conservation Act-2001 and its Features. Basics of Energy and its various forms, Material and Energy balance	4
2	Energy Audit Principles	Definition, Energy audit- need, Types of energy audit, Energy management (audit) approach- understanding energy costs, Bench marking, Energy performance, Matching energy use to requirement, maximizing system efficiencies, Optimizing the input energy requirements, Fuel and energy substitution. Elements of monitoring& targeting; Energy audit Instruments; Data and information-analysis. Financial analysis techniques: Simple payback period, NPV, Return on investment (ROI), Internal rate of return (IRR)	6
3	Energy Management and Energy Conservation in Electrical System	Electricity billing, Electrical load management and maximum demand Control; Power factor improvement, Energy efficient equipment and appliances, star ratings. Energy efficiency measures in lighting system, Lighting control: Occupancy sensors, daylight integration, and use of intelligent controllers. Energy conservation opportunities in: water pumps, industrial drives, induction motors, motor retrofitting, soft starters, variable speed drives.	6
4	Energy Management and Energy Conservation in Thermal Systems	Review of different thermal loads; Energy conservation opportunities in: Steam distribution system, Assessment of steam distribution losses, Steam leakages, Steam trapping, Condensate and flash steam recovery system. General fuel economy measures in Boilers and furnaces, Waste heat recovery, use of insulation- types and application. HVAC system: Coefficient of performance, Capacity, factors affecting Refrigeration and Air Conditioning system performance and savings opportunities.	6
5	Energy Performance Assessment	On site Performance evaluation techniques, Case studies based on: Motors and variable speed drive, pumps, HVAC system calculations; Lighting System: Installed Load Efficacy Ratio (ILER) method, Financial Analysis	4
6	Energy conservation in Buildings:	Energy Conservation Building Codes (ECBC): Green Building, LEED rating, Application of Non-Conventional and Renewable Energy Sources	4

Course Name: Bioinformatics

Course Code: OE30

Category: Open elective

Preamble:

This course is designed with the objective of equipping students with a robust understanding of the integration between biology and computational science, key bioinformatics concepts, methodologies, and applications. Through a combination of theoretical knowledge and practical applications, students will develop a holistic understanding of how computational methods can enhance the comprehension of biological processes. It also emphasizes on real-world biological questions and research challenges, empowering them to make meaningful contributions to the rapidly evolving field of bioinformatics.

Pre-requisites: Nil

Course Objectives:

- To enable learners to understand the basic principles of bioinformatics.
- To provide a foundational understanding of key bioinformatics concepts, including biological data types and analysis methods.
- To develop the skills necessary for analyzing and interpreting genomic and proteomic datasets using computational techniques.
- To familiarize students with essential bioinformatics tools and databases, enabling effective selection and application in research.
- To encourage the integration of bioinformatics approaches into biological research, fostering the ability to formulate and test hypotheses.

Course Outcomes:

Learner will be able to:

CO1: Understanding of foundational bioinformatics concepts.

CO2: Comprehending and applying knowledge of basic principles of mathematics and statistics.

CO3: Implementing efficient and reliable bioinformatics solutions by optimizing the usage of existing tools. CO4: Apply problem-solving skills to multivariate methods in bioinformatics.

CO5: Search and apply bioinformatics tools to analyze and interpret biological data

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Introduction to Bioinformatics	Basics of Biology: Characteristics and Principles of cells, DNA and chromosome, genes and the genomes. Types of biological data, Sequencing Methods: DNA & Protein, Genomic Sequencing, and Human Genome Project Overview and scope of Bioinformatics, Computers in biology, medicine & different problems in biology, Applications of Bioinformatics	6
2	Biological databases and their classification	Based on storage techniques (Flat, Relational, Object Oriented). Based on data (Primary, Secondary, Specialized and Composite). Search engines: Entrez& SRS Sequence databases: NCBI, EMBL, DDBJ Structural Databases: PDB Protein Databases: PIR, SWISS PROT Other Databases: Chemical and Drug Molecule Databases	6
3	Algorithms in Bioinformatics	Sequence Alignment: Heuristic Method (BLAST, FASTA) Pairwise Sequence Alignment: Local and Global Alignment (Dynamic programming Methods: Needleman Wunch Algorithm, Smith Waterman Algorithm.), Multiple Sequence Alignment: CLUSTAL W, Phylogenetic Analysis.	5
4	Introduction to drug designing	History of drug design, Stages of drug discovery and development; Drug properties, likeness. Preparation of Protein Structure: In silico Structure Prediction - Homology Modeling; Threading; Fold Recognition. Ab initio modeling; Model refinement and validation Molecular Visualization Software: Methods for representing biological data, 3D Structure Viewers Concept of pharmacophore mapping and pharmacophore based Screening	7
5	Computer aided drug designing	High throughput Virtual Screening and Molecular Docking: Rigid and Flexible Docking Analysis of Protein-Ligand interactions Quantitative Structure Activity Relationship (QSAR) (3D-QSAR approaches like COMFA and COMSIA.) Molecular Mechanics and Molecular Dynamics Simulations: Understanding the structural stability of protein and protein-ligand complex ADMET analysis	6
Total			30

Suggested list of Assignments:

1. Retrieving sequences, it's structural and functional data from the set of databases.

2. Analyzing sequences through alignment tools - BLAST, FASTA and CLUSTAL s.
3. 3D Protein modelling, validation and visualization
4. Protein ligand interaction by docking techniques
5. Designing a potential drug candidate.

Suggested List of Value-Added Home Assignments:

1. Mapping genes to biological pathways and analyze their interactions.
2. Construct and interpret a phylogenetic tree.

Suggested Online Courses:

1. Bioinformatics: Algorithms and Applications, offered by NPTEL Swayam,
https://onlinecourses.nptel.ac.in/noc21_bt06/preview
2. Bioinformatics: Introduction and Methods, offered by Peking University through Coursera,
<https://courses.coursera.org/bioinformatics-introduction-and-methods->

2. Bioinformatics: Sequence and genome analysis, David Mount, Cold Spring Harbor, N.Y press, 2004, Second edition.
3. Strategies for Organic Drug Discovery Synthesis and Design, Daniel Lednicer, Wiley International Publishers, 1998, Second Edition.
4. Essential Bioinformatics, Jin Xiong, Cambridge University Press, 2006, First Edition.

Course Name: Nanotechnology

Course Code: OE31

Category: Open elective

Preamble:

The course aims to provide a comprehensive understanding of nanotechnology fundamentals, its scientific principles, fabrication techniques, applications in engineering, and the ethical considerations associated with its usage. Students will explore how nanotechnology can be applied to different fields of engineering, including electronics, materials science, biomedical applications, and energy.

Pre-requisites: Nil

Course Objectives:

- To enable learners to understand the basic principles and concepts of nanotechnology.
- To enable learners to explain the properties and behavior of materials at the nanoscale.
- To enable learners to describe the fabrication and characterization techniques used in nanotechnology.
- To enable learners to explore the applications of nanotechnology in various engineering fields.
- To enable learners to analyze the societal and ethical implications of nanotechnology advancements.

Course Outcomes:

Learner will be able to:

CO1: Understand nanotechnology fundamentals.

CO2: Analyze nanoscale phenomena

CO3: Understand and apply key nanofabrication methods for creating nanoscale structures and devices. CO4: Understand the principles behind various characterization techniques for nanoscale materials.

CO5: Explore engineering applications of nanotechnology.

CO6: Evaluate ethical, environmental, and societal Impacts.

Course Scheme:

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Introduction to Nanotechnology	Definition, scope, and multidisciplinary nature of nanotechnology. Historical development of nanotechnology and key breakthroughs. Types of nanomaterials: nanoparticles, nanotubes, nanowires, quantum dots, and nanocomposites. Nanoscale dimensions: importance of size, surface area, and quantum effects. Exploration of nanotechnology's role in various industries (electronics, medicine, energy, etc.).	6
2	Properties of Nanomaterials	In-depth study of the physical, chemical, electrical, optical, and mechanical properties of nanomaterials. Surface energy, surface-to-volume ratio, and its impact on material properties. Detailed study of quantum confinement and its influence on electrical and optical properties. Toxicity and environmental concerns of nanomaterials: impact on living organisms and ecosystems.	6
3	Nanofabrication Techniques	Comprehensive overview of top-down and bottom-up nanofabrication methods. In-depth study of lithographic techniques: photolithography, electron-beam lithography. Advanced deposition techniques: Chemical Vapor Deposition (CVD), Atomic Layer Deposition (ALD), Physical Vapor Deposition (PVD). Molecular self-assembly, nanoimprint lithography, and soft lithography techniques.	6
4	Characterization of Nanomaterials	Detailed study of key characterization tools: Scanning Electron Microscopy (SEM), Transmission Electron Microscopy (TEM). Atomic Force Microscopy (AFM), Scanning Tunneling Microscopy (STM), X-ray diffraction (XRD). Optical spectroscopy and Raman spectroscopy techniques. Importance of precision and resolution in nanomaterial characterization.	4
5	Applications of Nanotechnology in Engineering	Nanotechnology in Electronics: nanoscale transistors, quantum dots, and nanomaterials for next-gen electronics. Energy Applications: nanomaterials for solar cells, energy storage, supercapacitors, and batteries. Biomedical Applications: drug delivery, diagnostic tools, nanomedicine, and tissue engineering. Environmental Applications: nanotechnology in water purification, air filtration, and pollution control. Mechanical and Civil Engineering: nanocomposites, self-cleaning surfaces, and smart materials.	4

6	Societal, Ethical, and Environmental Implications	Ethical issues related to nanotechnology: privacy concerns, nanotoxicology, and regulation. Environmental impacts of nanomaterials: nanowaste management and recycling. Public perception of nanotechnology and its societal impacts. Responsible innovation and future directions for ethical development of nanotechnology. Regulatory frameworks for nanomaterials in India and worldwide.	4
Total			30

Suggested list of Assignments:

1. Explore one specific application of nanotechnology in any engineering field (e.g., electronics, medicine, or energy).
2. Comparative Analysis of Nanoscale vs. Bulk Properties.
3. Design of a Nanofabrication Process for a device.
4. Nanomaterials Characterization Report interpretation.
5. Propose a simple nanotechnology-based solution for an engineering challenge in your chosen field.
6. Ethical and Environmental Implications of Nanotechnology.

Suggested List of Value-Added Home Assignments:

1. Reviewing Nano products and new technologies.
2. Novel technical paper writing based on recent advancements.
3. Problem Based Learning on Nano sensor development.

Suggested Online Courses:

1. Nanotechnology : Introduction, Essentials, and Opportunities

Course Name: Strategic Marketing and Business Planning

Course Code: MDMBD03

NEP Vertical_Basket: MDC_MDM

Preamble:

The objective of this course is to advance the student's knowledge in planning and managing a business in the tech sector with an emphasis on marketing strategy, branding, and market expansion.

Pre-requisites:

Introduction to Business Development and Marketing Principles, Financial Basics for Engineers and Technopreneurs

Course Objectives:

- Create effective marketing and branding strategies for engineering products.
- Explore B2B and B2C models.
- Learn to write a business plan.
- Evaluate market entry and scale-up strategies.

Course Outcomes:

Students will be able to:

CO1: Draft a business plan with marketing, operations and financial sections.

CO2: Create a brand positioning strategy for a tech product.

CO3: Compare different go-to-market models and digital strategies.

CO4: Design a simple customer acquisition funnel

Course Scheme:

Course Title: Innovation Management and Scaling Startups

Course Code: MDMIE03

Vertical/ Sub-Vertical: MDM

K-S-A Mapping: Knowledge and Skills

Pre-requisite required: MDMIE01, MDMIE02

Pre-requisite for: NIL

Recommended Semester: 5

Preamble:

Enable engineering students to identify real problems, develop technically feasible solutions, validate them with users, and create a credible plan to scale the solution from prototype to pilot to early market deployment.

This course is designed to help students understand how startups and innovation-driven organisations move beyond the early idea and planning stage into product-market fit, growth, scale, and long-term sustainability. Building on the concepts introduced in Foundations of Innovation and Entrepreneurship and Startup Planning and Development, the course focuses on managing innovation, developing scalable products, building growth strategies, creating partnerships, using emerging technologies responsibly, and preparing ventures for expansion.

The course combines global innovation frameworks with practical startup scaling methods used by founders, product teams, investors, and innovation leaders. Students will explore how organisations manage innovation portfolios, use agile and AI-enabled product development practices, measure growth through startup metrics, scale operations and teams, build strategic partnerships, and address responsible innovation, sustainability, data privacy, and AI governance.

The teaching approach is case-based and application-oriented, with emphasis on real-world examples, technology-led ventures, group activities, startup growth analysis, and scale-up strategy development.

Pre-requisites: MDMIE01 & MDMIE02

Course Objectives:

- To introduce students to innovation management and startup scale-up.
- To understanding of types of business innovation
- To understand product development stages and resource requirement
- To understand build awareness, product / company compliance
- To enable students to prepare an innovation - driven start up.

Course Outcomes:

Students will be able to:

CO1: Understand the fundamentals of innovation, design thinking and innovation

CO2: Learn types of business innovation

CO3: Industrial product development stages and innovation in scaling

CO4: Scaling innovation and success measurement

Course Scheme:

Course Code	Contact Hours		Credits Assigned

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Fundamental of Innovation	Fundamental of innovation: Introduction to Innovation, Types of Innovation: Product, Process, Business Model, and Social Innovation, Innovation vs. Invention. Innovation lifecycle. Innovation Ecosystem, Characteristics of Innovative Organizations. Design Thinking and Problem Identification Understanding User Needs, Empathy Mapping, Problem Framing Techniques, Design Thinking Process, Opportunity Identification. Creativity and Idea Generation. Creative Thinking Techniques, Brainstorming and Mind Mapping, TRIZ Methodology, Idea Screening and Prioritization, Concept Development. Role of AI in fundamental of innovation Group Assignment: understand FMCG product Innovation (Case study presentation/ Advertisement interpretation)	12
2	Types of Business Innovation	Stages of startup: Idea stage, validation stage, MVP stage, startup formation stage, early traction stage, growth stage, scaling stage, maturity stage, exit stage Incremental, disruptive, architectural, and business model innovation. Innovation lifecycle and innovation portfolio. Open innovation, co-creation, and ecosystem-based innovation. Case studies on the business innovation. Case study will be shared amongst the group. Case study interpretation, innovation and conclusion.	10
3	Product development stages and	Product development stages. POP, POC, MVP, Marketable product, compliance (Government and product compliance). Challenges and valley of death.	8

	resource requirements	Product market fit, Resources requirement and preparation: Growth-stage funding and investor readiness. Basics of valuation, cap table awareness, and funding rounds. Strategic partnerships, alliances, platform thinking, and distribution partnerships. Component of ideal pitch deck, investor expectations, time management.	
4	Product scaling and innovation	Product-market fit and customer feedback loops. Product roadmap and feature prioritisation. Business model canvas innovation, growth metrics, scaling, partnerships. Case studies business innovation	8
5	Scaling innovation, strategic moves, success measurement and accounting	Responsible innovation and ethical scaling. Data driven decision, social entrepreneurship and impact-driven business models. Impact measurement. Data privacy and start up governance. Modern tool for decision making. Role of AI in scaling. AI-enabled workflows	7
Total			45

Tutorials:

- Case study analysis of Indian and global scaling startups.
- Innovation audit of an existing product, startup, or organisation.
- Product-market fit analysis using customer personas and feedback loops.
- Prototype testing workshop using no-code, low-code, or AI-assisted tools.
- Growth metrics worksheet using KPIs, OKRs, funnel metrics, retention, and revenue logic.
- AI-assisted startup scaling exercise for market research, product ideas, customer communication, and growth planning.
- Investor and partnership role-play discussion.
- Responsible AI, privacy, sustainability, and ethical scaling discussion.
- Group activity: preparing a scale-up strategy for a selected startup idea.

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	45	30	50	125

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

This course introduces the integration of Machine Learning techniques with Bioinformatics for analyzing complex biological data. It covers fundamental concepts of bioinformatics, biological datasets, and essential machine learning methods including supervised, unsupervised, and deep learning approaches. The course emphasizes data preprocessing, pattern recognition, and predictive modeling in genomics, proteomics, and other omics data. It also highlights real-world applications in healthcare such as disease prediction, drug discovery, and precision medicine. The subject aims to equip students with analytical and computational skills required for modern biological and biomedical research.

Course Objectives:

- To introduce the fundamental concepts of bioinformatics and machine learning for biological data analysis.
- To enable students to apply data preprocessing, feature selection, and representation techniques on biological datasets.
- To develop the ability to apply supervised and unsupervised learning algorithms for solving bioinformatics problems.
- To provide understanding of deep learning methods and their applications in genomics, proteomics, and healthcare analytics.

Course Outcomes:

Learner will be able to:

Course Outcomes	Course Outcome Statement	Bloom's Level
CO1	Explain the fundamental concepts of bioinformatics and machine learning techniques.	Remember
CO2	Describe biological data preprocessing, feature selection, and data representation methods.	Understand
CO3	Apply supervised learning algorithms for classification and prediction in bioinformatics.	Apply
CO4	Apply clustering and pattern recognition techniques on biological datasets.	Apply
CO5	Analyze deep learning models used in sequence and structure analysis.	Analyze
CO6	Analyze machine learning applications in healthcare and bioinformatics domains.	Analyze

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours	CO's Mapped
1	Introduction to Bioinformatics and Machine Learning	Overview of bioinformatics, Biological datasets, Challenges in biological data analysis, Introduction to Artificial Intelligence and Machine Learning, Applications of ML in bioinformatics and healthcare	6	CO1
2	Data Preprocessing and Biological Data Representation	Biological data representation, Data cleaning and preprocessing, Handling missing biological data, Feature engineering and feature selection, Data normalization and scaling, Data visualization techniques, Applications such as disease prediction based on gene expression data.	7	CO2
3	Supervised Learning Techniques in Bioinformatics	Introduction to supervised learning, Regression techniques, Classification algorithms - K-Nearest Neighbours (KNN), Decision Trees, Random Forest, Support Vector Machines (SVM), Model evaluation metrics, Cross-validation and model optimization. Application such as Protein function prediction	9	CO3

Course Name: Intelligent Mobile Robotics

Course Code: MDMRB03

Category: Multidisciplinary Minor (MDM)

Preamble:

This course introduces the fundamentals of mobile robotics with an emphasis on navigation and path planning. Students learn how mobile robots perceive their environment, localize themselves, and plan safe and efficient paths using classical and optimization-based algorithms such as Bug methods, A*, Potential Fields, and Gradient Descent.

Course Objectives:

- To understand the kinematics, sensing, and perception principles governing mobile robot motion and environment interaction.
- To apply localization, mapping, and classical path planning algorithms for autonomous navigation.
- To design and evaluate optimization-based and intelligent path planning strategies for smooth and collision-free robot motion.

Pre-requisites:

Fundamentals of Robotics and Control (BMMDM1T)

Course Outcome: The students will be able to:

CO1: Explain the fundamentals of mobile robots, locomotion mechanisms, and kinematic principles including wheel constraints, manoeuvrability, and motion control of mobile robotic systems. (Modules 1 & 2)

CO2: Describe the principles of robot perception, sensor systems, uncertainty representation, and feature extraction techniques used in mobile robots. (Module 3)

CO3: Apply localization and mapping techniques including probabilistic localization, belief representation, and map representation for determining robot position in an environment. (Module 4)

CO4: Analyze localization-based navigation methods and autonomous map-building techniques for mobile robot navigation. (Modules 4 & 5)

CO5: Design path planning and obstacle avoidance strategies for autonomous mobile robots using planning and reacting approaches. (Module 5)

CO6: Evaluate navigation architectures, decomposition techniques, and modern autonomous navigation systems used in intelligent mobile robots. (Module 6)

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory+ Tutorial	45	30	50	125

The assessment/evaluation guidelines for the courses of different credits are mentioned in the above table. Notwithstanding the above, each course faculty shall have the choice to decide her/his assessment methodology based on the nature of the course. Faculty may propose a revised assessment methodology for his/her course. However, the revised assessment methodology shall be approved by a panel constituted at institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Module Contents	No. of Hours
01	Introduction and Locomotion	Introduction to mobile robots; overview of mobile robotics; key issues in locomotion; legged mobile robots; leg configurations and stability; examples of legged locomotion; wheeled mobile robots; wheeled locomotion design space; case studies of wheeled mobile robots.	07
02	Mobile Robot Kinematics	Kinematic models and constraints; representation of robot position; forward kinematic models; wheel kinematic constraints; robot kinematic constraints; examples of robot kinematic models; mobile robot manoeuvrability; degree of mobility and steerability; robot workspace; holonomic robots; path and trajectory considerations; motion control — open loop and feedback control.	08
03	Perception	Sensors for mobile robots; sensor classification and performance; wheel and motor sensors; heading sensors; ground-based beacons; active ranging; motion and speed sensors; vision-based sensors; representing uncertainty; statistical representation; error propagation; feature extraction using range and visual data.	07
04	Mobile Robot Localization	Introduction to localization; challenges of localization — noise and aliasing; sensor noise; sensor aliasing; effector noise; odometric error models; localization-based navigation; belief representation; map representation; probabilistic map-based localization; Markov localization; Kalman filter localization; landmark-based navigation; positioning beacon systems; route-based localization.	08
05	Autonomous Mapping and	Autonomous map building; stochastic map technique; other mapping techniques; introduction to planning and	08

Module No.	Module Name	Module Contents	No. of Hours
	Navigation	navigation; competences for navigation — planning and reacting; path planning; obstacle avoidance techniques.	
06	Navigation Architectures	Navigation architectures; modularity for code reuse and sharing; control localization; techniques for decomposition; case studies of tiered robot architectures; introduction to modern navigation systems and autonomous mobile robots.	08
Total			45

Suggested List of Value-Added Home Assignments

1. Design and simulate a wheeled mobile robot capable of autonomous navigation and obstacle avoidance in an indoor environment using ultrasonic or LiDAR sensors.
2. Develop a vision-based mobile robot system for object detection and sorting using a camera and a basic machine learning or image processing technique.
3. Implement a mobile robot simulation that performs path planning and navigation for automated material handling in a warehouse environment.
4. Design a voice-controlled mobile robot using speech recognition tools to execute commands such as movement, navigation, or environmental monitoring.
5. Build a prototype or simulation of a surveillance mobile robot capable of detecting motion or intrusions and generating alerts through a monitoring interface.
6. Simulate a multi-robot system for cooperative exploration and mapping of an unknown environment using onboard sensors and communication between robots.

Problem-Based Experiments (PBL List)

1. Study different types of mobile robots and compare legged and wheeled locomotion using suitable case studies or simulations.
2. Analyze the stability and maneuverability of legged mobile robots for different leg configurations.
3. Simulate wheeled mobile robots and study the effect of wheel arrangements on robot motion.
4. Develop a kinematic model for a differential drive robot and simulate its movement for different velocity inputs.
5. Analyze wheel kinematic constraints and robot kinematic constraints for mobile robotic systems.
6. Study the maneuverability of holonomic and non-holonomic robots using simulation tools.
7. Implement open-loop and feedback motion control for trajectory tracking of a mobile robot.
8. Interface and simulate wheel encoders, ultrasonic sensors, LiDAR, and vision sensors for mobile robots.
9. Analyze the performance characteristics of different sensors used in mobile robots.
10. Represent uncertainty in sensor measurements and study error propagation using simulated sensor data.
11. Perform feature extraction using range data or vision-based sensor inputs for object identification.
12. Implement dead reckoning localization using odometry data and analyze localization errors.

13. Apply Kalman filter localization for improving robot pose estimation using sensor fusion.
14. Implement particle filter or Markov localization techniques in a known environment.
15. Develop and compare different map representation methods for mobile robot navigation.
16. Simulate landmark-based and beacon-based localization methods for autonomous robots.
17. Implement autonomous map building using basic SLAM or stochastic mapping techniques.
18. Develop path planning algorithms for mobile robot navigation in obstacle-filled environments.
19. Implement obstacle avoidance techniques for autonomous mobile robots using sensor inputs.
20. Study modular navigation architectures and simulate autonomous navigation of a mobile robot in ROS or a virtual environment.

Course Name: Skill Competency Development 2

Course Code: MDM02

Vertical/ Sub-Vertical: Multidisciplinary Minor Courses

K-S-A Mapping: Skill

Pre-requisite required:

Basic communication skills, fundamental numerical ability, and awareness of campus placement process.

Pre-requisite for:

Placement preparedness, internship readiness, professional interviews, and workplace communication

Course Level:5 Recommended Semester: 7 Course Scheme:

Contact Hours		Credits Assigned	
Theory	Practical	Theory	Practical
-	2	-	1

Preamble:

The Skill Competency Development 2 course is designed as a placement-oriented professional development course for Semester 7 undergraduate students. The course focuses on preparing learners for campus recruitment through personality building, CV building, mock interviews, company-specific training, aptitude paper solving, technical and HR interview practice, and pre-placement preparation. The course aims to enhance students' confidence, self-presentation, communication ability, professional attitude, and interview readiness. It provides structured exposure to company-specific recruitment requirements such as online assessments, written tests, coding or aptitude rounds, group discussions, mock sessions, and campus recruitment interactions.

By integrating personality development, resume preparation, interview practice, paper-solving sessions, and company-specific placement training, this course prepares learners to participate effectively in campus placement drives and professional selection processes.

Course Objectives:

- Develop students' personality, confidence, grooming, professional behaviour, workplace etiquette, email etiquette, telephone etiquette, and self-presentation skills required for campus placement.
- Train students to prepare a professional CV/resume, career objective, LinkedIn profile, self-introduction, and professional portfolio suitable for campus recruitment.
- Prepare students for HR interviews, technical interviews, behavioural interviews, mock interviews, and group discussions through structured practice and feedback.
- Prepare students for fundamental technical concepts and their relevance in problem solving

- Provide insight about the various problem solving approaches, highlighting the important technical test and technical interview questions from placement point of view.
- Provide company-specific placement preparation through mock aptitude tests, technical test series, coding/written test practice, previous company paper solving, and campus drive readiness.

Course Outcomes:

Learner will be able to:

Course Outcomes	Course Outcome Statement	Bloom's Level
CO1	Demonstrate improved personality traits, grooming, confidence, professional behaviour, email etiquette, telephone etiquette, body language, and workplace etiquette required for campus placement	Remember
CO2	Prepare a professional CV/resume, career objective, LinkedIn profile summary, self-introduction, and portfolio presentation suitable for company recruitment processes.	Understand
CO3	Participate effectively in mock interviews, HR interviews, technical interviews, behavioural interviews, and group discussions by applying appropriate communication, presentation, and interview etiquette.	Apply
CO4	Analyze the different technical concepts and their relevance for solving the various optimization problems.	Analyze
CO5	Analyze the effectiveness of good problem-solving approaches and consider the important technical questions from placement point of view.	Analyze
CO6	Solve company-specific aptitude, reasoning, verbal, coding, written, and technical test papers using suitable strategies, accuracy, and time-management techniques for campus recruitment	Analyze

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	50	-	-	50

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Personality Building and Professional Behaviour	1. Self-Awareness and Personality Development 2. Confidence Building and Personal Effectiveness 3. Professional Appearance and Grooming 4. Communication Skills and Professional Etiquette 5. Career Readiness and Professional Conduct	4
2	CV Building and Professional Profile Development	1. Introduction to CV / Resume and Career Documentation 2. Resume Structure, Resume Writing and Optimization Techniques 3. ATS-friendly resume basics.	2
3	Mock GD, Interview and Interview Readiness.	1. Interview Types and Selection Process Overview 2. Technical and Behavioural Interview Skills, dos and don'ts during interview. 3. Group Discussion and Mock Interview Practice	4
4.	Revisiting Technical Topics	1. Revision of Data Structure Topics 2. Revision of Algorithms and Complexity 3. Revision of Algorithm Design and Optimization Problems	4
5	Revision of Problem-Solving Approach	1. Revision of Problem-Solving Approaches 2. Revision of Important Technical Test Questions 3. Revision of Important Technical Interview Questions	4
6	Company-Specific Mock Aptitude and Technical Test series.	1. Company Recruitment Process and Eligibility Understanding 2. Aptitude and Technical Assessment Preparation, mock test practise 3. Practice Sessions and Performance Enhancement 4. Pre-Placement Preparation and Communication Skills 5. Placement Day Readiness and Professional Conduct	12
Total			30

-

Chapter 1

1. Self-Awareness and Personality Development

- Importance of personality development
- Self-awareness
- Strengths and weaknesses analysis
- Personality reflection tasks
- Positive attitude
- Emotional maturity

2. Confidence Building and Personal Effectiveness

- Confidence building
- Confidence-building exercises
- Discipline
- Time management
- Stress management
- Adaptability

3. Professional Appearance and Grooming

- Grooming
- Grooming assessment
- Appearance
- Attire
- Body language

4. Communication and Professional Etiquette

- Self-introduction
- Professional etiquette
- Email etiquette
- Telephone etiquette
- Workplace behaviour

5. Career Readiness and Professional Conduct

- Personal branding
 - Professional conduct during campus placement
 - Workplace professionalism and ethics
 - Campus recruitment behaviour and expectations
-

Chapter 2

1. Introduction to Resume and Career Documentation

- Importance of CV/Resume in campus placement
- Purpose and role of a professional resume

2. Resume Structure and Content Development

- Career objective
- Academic details
- Technical skills
- Projects
- Internships
- Certifications
- Achievements
- Co-curricular and extra-curricular activities

3. Resume Writing and Optimization Techniques

- Resume formatting
- Common resume mistakes
- ATS-friendly resume basics

4. Professional Digital Presence and Communication

- LinkedIn profile creation
- Email etiquette for job applications
- Professional portfolio presentation

5. Resume Review and Practical Application

- Preparation of updated CV
 - CV submission and review process
 - Feedback and improvement activities
-

Chapter 3

1. Interview Types and Selection Process Overview

- HR interview
- Technical interview
- Behavioural interview
- Stress interview
- Panel interview

2. Interview Preparation and Question Handling

- Common HR questions
- Professional introduction
- Salary and location-related questions
- Handling rejection

3. Technical and Behavioural Interview Skills

- Project explanation
- Internship discussion
- Technical concept explanation
- STAR method for behavioural answers

4. Professional Interview Etiquette and Communication

- Interview etiquette
- Follow-up communication
- Professional conduct during interviews

5. Group Discussion and Mock Interview Practice

- Dos and Don'ts during GD
- Mock GD activities
- One-to-one mock interviews
- Peer interview practice
- Feedback-based improvement

- Final interview simulation
-

Chapter 4

1. Company Recruitment Process and Eligibility Understanding

- Understanding company-specific recruitment patterns
- Job descriptions (JD)
- Eligibility criteria

2. Aptitude and Technical Assessment Preparation

- Aptitude test patterns
- Technical test requirements
- Mock coding/written test practice
- Verbal and reasoning paper solving

3. Practice Sessions and Performance Enhancement

- Previous company paper discussion
- Mock aptitude sessions
- Mock technical rounds
- Group discussion practice

4. Pre-Placement Preparation and Communication Skills

- Pre-placement talk preparation
- Interaction with recruiters
- Professional communication during recruitment

5. Placement Day Readiness and Professional Conduct

- Visiting company campus etiquette
- Document readiness
- Final checklist for placement day
