

Vidyalankar Institute of Technology

An Autonomous Institute affiliated to University of Mumbai

Bachelor of Technology in Electronics and Computer Science

First Year Scheme & Syllabus (R-2026)

(As per NEP 2020, with effect from the Academic Year 2026-27)

Preamble

The National Education Policy (NEP) framework aims to break the mold from teacher centric to student centric educational practices. It empowers the students with flexibility in terms of choosing courses across different faculties and modes of learning.

This multidisciplinary approach will encourage learners to follow their passion and inherent interests. The learner is free to learn at a pace that he is comfortable with, and this enables lifelong learning. It also enhances the scope for holistic personality development.

This premise is truly reflected in preamble of the NEP document, "The future of nation is decided in the classrooms of the schools and colleges today".

Details of implementation:

NEP curriculum framework enables us to accelerate change, redesign systems with equity in mind, respond to feedback, encourage collaboration, catch and pollinate ideas and create a culture of research and development. It will allow us to offer the required academic flexibility which will focus on improving competency level of students with diverse strengths.

The curriculum planned by VIT has vertical **Program Courses** consisting of core courses (PCC) of branch of engineering positioned and sequenced to achieve sequential and integral learning of the entire breadth of the specific branch. This vertical also includes Professional elective courses (PEC) which offer flexibility and diversity to learners to choose specialization from a basket of recent developments in their field of technology. The selection of unique professional elective courses based on industrial requirements and organizing them into tracks is a special feature of this curricula ensuring employability. The vertical **Multidisciplinary Courses** consists of Open Elective (OE) courses and multidisciplinary minor (MD M) courses. Special vocational and skill development courses are included as a part of **Skill courses** vertical that make student capable to work in industrial environment.

The student is expected to demonstrate their ability through courses in **Experiential Learning Courses** vertical like internships/On Job Training, Community Engagement Project, Real Industry Project/ research problem. Our curriculum also introduces Social Service Internship and Internship with institutes abroad along with courses like Design Thinking. This will lead to the creation of products and/ or patents through this program.

For holistic development of students, apart from technical courses, Ability Enhancement Courses, Entrepreneurship/Economics/Management Courses, Indian Knowledge System and Value Education courses from vertical **Humanities and Social Science and Management** develop the required soft-skills and attitude amongst learners.

In **Liberal Learning** vertical courses like Various Dance Forms, Global citizenship Education, Facets of Astronomy etc. aim to create balance in brain hemispheres and hence improve learners' clarity in thoughts and responses.

In addition to core courses, professional and open electives; our framework offers honours degree in each programme of engineering. It includes specialized courses along with field/ domain study that make students capable of working on industry relevant problems.

ISA=In Semester Assessment: This will involve evaluation based on thought provoking assignments/ experiments/ class tests/ take home tests/ open book tests/ quizzes/ certification course etc... activities which will be assigned on weekly basis during the semester.

MSE= Mid Semester Examination: This will be a proctored examination conducted in the semester. Syllabus will be based on the percentage of syllabus completed till the exam.

ESE= End Semester Examination: This examination will be conducted after the end of academic session covering 100% syllabus of the course.

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus of First Year Semester - I

Course Name: Engineering Mathematics-I

Course Code: BSC12

Vertical/ Sub-Vertical: BSES_BSC

K-S-A Mapping: Knowledge & Skill

Pre-requisite required:

Pre-requisite for: BSC03 & BSC04 (Engineering Mathematics-II), and higher-level mathematical courses.

Recommended Semester: I

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
BSC01	3	-	3	-

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	20 (~20%)	30 (~30%)	50 (~50%)	100 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

Engineering Mathematics-I provides a strong mathematical foundation for first-year engineering students by introducing essential concepts in complex analysis, discrete-time systems, multivariable calculus, and linear algebra. The course covers complex numbers, hyperbolic and logarithmic functions, Z-transforms, partial differentiation, matrix theory, and computational methods for solving linear systems. Emphasis is placed on developing analytical thinking, problem-solving skills, and the application of mathematical techniques to engineering and technological problems encountered across various disciplines.

Course Objectives:

- To recall and understand the fundamental concepts of complex numbers, hyperbolic functions, logarithmic functions, Z-transforms, partial differentiation, matrices, and linear systems.
- To develop proficiency in mathematical techniques used for solving engineering problems involving complex variables, discrete-time systems, and multivariable functions.
- To apply matrix methods and computational techniques for analyzing and solving systems of linear equations.
- To develop analytical skills for interpreting mathematical models and evaluating engineering systems using appropriate mathematical tools.
- To prepare learners for advanced engineering mathematics courses and their applications in various engineering domains.

Course Outcomes:

Learner will be able to:

Course Outcomes	Course Outcome Statement	Bloom's Level
CO1	Recall the definitions, properties, formulas, and theorems related to complex numbers, hyperbolic functions, logarithmic functions, Z-transforms, partial differentiation, matrices, and systems of linear equations.	Remember
CO2	Explain the concepts and underlying principles of complex numbers, hyperbolic and logarithmic functions, Z-transforms, partial differentiation, matrix operations, and linear systems.	Understand
CO3	Apply techniques of complex numbers, Z-transforms, partial differentiation, matrix methods, and computational methods to solve mathematical and engineering problems.	Apply
CO4	Analyze multivariable functions, discrete-time systems, matrix structures, and systems of linear equations using appropriate mathematical and computational techniques.	Analyze

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours	CO's Mapped
1	Complex Numbers	Contents: De Moivre's Theorem, expansion of $\sin n\theta$ and $\cos n\theta$, powers and roots of complex numbers. Learning Objective: Understand the use of De Moivre's Theorem and the operations on complex numbers. (CO1 to CO4) Learning Outcomes: A learner will be able to: 1.1 Recall De Moivre's Theorem and related expansions. (CO1) 1.2 Explain power and roots of complex numbers. (CO2) 1.3 Apply De Moivre's theorem to trigonometric identities. (CO3) Self-Learning Topics: - Geometric representation of complex numbers - Case Study: Analysis of QPSK Modulation using Complex Numbers: Represent communication symbols as complex phasors and determine transmitted signal phases using De Moivre's theorem.	8	

2	Hyperbolic & Logarithmic Functions	Contents: Circular and hyperbolic functions, inverse functions, separation of real and imaginary parts, logarithmic functions. Learning Objective: Understand circular, hyperbolic and logarithmic functions for real and complex inputs. (CO1 to CO4) Learning Outcomes: A learner will be able to: 2.1 Recall definition of circular and hyperbolic functions. (CO1) 2.2 Explain inverse and logarithmic functions. (CO2) 2.3 Apply separation of real/imaginary parts in problems. (CO3) 2.4 Analyze logarithm of complex numbers. (CO4) Self-Learning Topics: • Applications of Hyperbolic Functions in Signal Processing and Communication Systems. • Case Study: Modeling Nerve Signal Attenuation using Hyperbolic Functions: Study biological signal propagation and use hyperbolic functions to model membrane potential variations.	7	
3	Z Transforms	Contents: Z-Transform of a sequence, Properties of Z-Transform, Examples based on properties of Z-Transform, Inverse Z- Transform, Inverse Z- Transform using Binomial method and convolution theorem. Learning Objective: To understand the Z-transform and its properties and apply methods to compute inverse Z-transforms using binomial expansion and convolution theorem for solving discrete systems. (CO1 to CO4) Learning Outcomes: A learner will be able to: 3.1 Recall definition of Z-transform and its basic properties. (CO1) 3.2 Understand the significance of properties of Z-transform in discrete-time systems. (CO2) 3.3 Apply Z-transform techniques to compute inverse Z-transforms using binomial method and convolution theorem. (CO3) 3.4 Analyze inverse Z-transform computations by comparing different methods such as	7	

		binomial expansion and convolution theorem. (CO4) Self-Learning Topics: • Expansions of functions using Taylor's series. • Case Study: Performance Analysis of a Digital Temperature Monitoring System: Use Z-transforms to analyze sampled sensor data and evaluate discrete-time system response.		
4	Partial Differentiation and Applications	Content: Partial derivatives (first and higher order), composite functions, maxima and minima of two-variable functions. Learning Objective: Apply partial derivatives and Euler's theorem to understand functions of several variables. (CO1 to CO4) Learning Outcomes: A learner will be able to: 4.1 Recall formulae for partial derivatives. (CO1) 4.2 Understand conditions for maxima and minima of functions in two variables. (CO2) 4.3 Apply partial derivatives in multi-variable problems. (CO3) 4.4 Analyze extreme points using conditions of maxima & minima. (CO4) Self-Learning Topics: • Euler's Theorem in two and three variables and its applications. • Case Study: CPU Performance Optimization: Model execution time as a function of clock frequency and cache size. Use partial derivatives to determine optimal operating conditions.	8	
5	Linear Algebra (Matrices)	Contents: Rank of matrix, evaluation of rank using echelon forms, reduction to normal form, PAQ forms. Learning Objective: To introduce the concept of rank of a matrix and various methods to compute it, and to compare these methods based on their application and interpretation. (CO1 to CO4) Learning Outcomes: A learner will be able to:	8	

		5.1 Recall Definition of rank of matrix. (CO1) 5.2 Understand normal and echelon form of rank of matrix. (CO2) 5.3 Compute the rank using echelon form, normal form and PAQ normal form (CO3) 5.4 Analyze inverse of a matrix using its rank (CO4) Self-Learning Topics: • Applications of Matrix Rank in Image Processing and Network Analysis • Case Study: Social Network Connectivity Analysis: Use matrix rank and adjacency matrices to determine redundancy and connectivity among network nodes.		
6	Linear Systems and Computational Methods	Contents: System of homogeneous and non-homogeneous equations their consistency and solution. Linear Independence and Dependence of Vectors. Computational Method - LU Decomposition Method. Learning Objective: To develop an understanding of how matrix rank is applied to analyze and solve systems of linear equations and understand various computational methods. (CO1 to CO4) Learning Outcomes: A learner will be able to: 6.1 Recall definition of solution of system of homogenous and non-homogeneous equations. (CO1) 6.2 Understand linear dependence and independence of vectors. (CO2) 6.3 Apply matrix methods to solve non-homogeneous and homogeneous linear systems. (CO3) 6.4 Analyze numerical stability & efficiency of a system using LU decomposition method. (CO4) Self-Learning Topics: • Computational Implementation of LU Decomposition using MATLAB/Python. • Case Study: ECG Signal Reconstruction using LU Decomposition: Solve large systems of equations generated during	7	

		biomedical signal reconstruction and compare computational efficiency.

Course Name: Engineering Physics

Course Code: BSC10T and BSC10P

Vertical/ Sub-Vertical: BSES_BSC

K-S-A Mapping: Knowledge

Pre-requisite required: Vector Calculus, Differential Equations, Linear Algebra and Basic 12th standard Physics

Pre-requisite for: PCEC01T & PCEC01P (Electronic Devices and Circuits)

Recommended Semester: 1 and 2

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
BSC10T	2	--	2	-
BSC10P	-	2	-	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (BSC10T)	15 (~20%)	20 (~30%)	40 (~50%)	75 (100%)
Practical (BSC10P)	25 (50%)	-	25 (50%)	50 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

Most of the engineering branches are being offspring of basic sciences where physics is playing a pivotal role in concept and understanding the foundation of core engineering branches. Physics prepares learners to apply physics to tackle 21st century engineering challenges, and to apply engineering to address 21st century questions in physics. The course will develop the learner awareness in semiconductor devices and quantum Physics. The learner will develop an informed appreciation of the paradigm shift already in evidence in technologies behind modern services and products. He will possess basic physics knowledge to pursue simulation and modelling of the semiconductor systems

Course Objectives:

- Identify and understand the fundamental physical principals underlying engineering devices and processes— a prerequisite to become successful engineers.
- To provide inclusive knowledge of fundamental physical principles encouraging engineering students to venture into the research field.

- To develop scientific temperament for scientific observations, recording, and inference drawing essential for technology studies.
- To give exposure to the topics of fundamental physics in semiconductor and Laser.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Recall fundamental definitions, laws, structures, and basic principles related to crystallography, semiconductors, engineering materials, lasers, and quantum physics.	Remember
CO2	Explain key physical concepts such as Miller indices, energy bands, carrier transport, device operation, material properties, laser mechanisms, and quantum behavior.	Understand
CO3	Apply physical laws, mathematical models, and principles to solve problems related to semiconductor behavior, device operation, material response, laser action, and quantum systems.	Apply
CO4	Analyze the interrelationship between structural, electrical, and optical properties across different devices, materials, and quantum systems to understand their behavior under various conditions.	Analyze
CO5	Evaluate the effectiveness and performance of semiconductor devices, lasers, and engineering materials for practical and futuristic applications based on physical principles.	Evaluate
CO6	Design conceptual experiments, models, or solutions that integrate crystallography, semiconductor physics, lasers, and quantum principles for engineering innovation or application.	Create

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Crystallography	Learning Objective: Recall the types of Bravais lattices, Miller indices, and identify common crystal defects in real materials.. (CO1). Contents: Bravais Lattice, Lattice Characteristics Miller - Indices, Planes and Directions, Interplanar spacing. Real crystals and crystal defects. Self-Learning Topics: Explore unit cell calculations, coordination number, and packing efficiency in cubic systems. Learning Outcomes: 1.1: Recall the definitions of Bravais lattices and types of unit cells. (P.I. – 1.1.1 and 1.3.1) (CO1) 1.2: Explain the concept of Miller indices and their use in crystallography. (P.I. – 1.2.1 and 1.3.2) (CO2) 1.3:	5

		<i>Categorize types of crystal defects and discuss their impact on materials. (P.I. – 1.2.2 and 2.1.4) (CO1, CO2)</i>	
2	Semiconductor Physics	Learning Objective: Explain the classification of semiconductors, band theory, and the role of Fermi energy in determining carrier concentration(CO2) Contents: Band theory of solids, Classification of semiconductors. Fermi-Dirac statistics, carrier concentration in semiconductors. Concept of Fermi energy level, its position and variation with temperature and impurity concentration.. Self-Learning Topics: Study intrinsic vs extrinsic semiconductor energy diagrams and temperature dependence of carrier concentration. Learning Outcomes: A learner will be able to: 2.1 2.1: Describe the band theory of solids and energy band diagrams. (P.I. – 1.2.2 and 1.3.1) (CO2) 2.2 2.2: Explain Fermi-Dirac distribution and calculate carrier concentration. (P.I. – 1.4.2 and 2.1.2) (CO2) 2.3 2.3: Classify semiconductors using band structure. (P.I. – 1.2.2 and 2.1.4) (CO2)	5
3	Semiconductor Conductivity	Learning Objective: Apply principles of drift, diffusion, and the Hall effect to analyze charge transport and conductivity in semiconductors.(CO3) Contents: Intrinsic carrier density, mobility, and conductivity. Carrier diffusion, drift, and resistance. Electrical conduction in extrinsic semiconductor. Diffusion length and mean lifetime. Hall Effect. Learning Outcomes: A learner will be able to: 3.1 3.1: Calculate current density from drift and diffusion mechanisms. (P.I. – 2.3.1 and 2.4.1) (CO3)3.2: Explain and apply the Hall effect to determine carrier concentration and type. (P.I. – 1.3.1 and 1.2.2) (CO3)3.3: Analyze the influence of mobility and lifetime on conductivity. (P.I. – 2.1.4 and 2.2.3) (CO3)	5
4	Semiconductor Devices	Learning Objective: Analyze the operation of p-n junctions and associated devices using band bending and Fermi level concepts.(CO4) Content: Physics of p-n junctions. Fermi level - in equilibrium, in forward and in reverse bias. Band bending in forward and reverse bias junction Introduction to two terminal devices – Rectifier diode, LED, Zener diode, PIN diode, Solar Cell, Schottky diode etc. Learning Outcomes: A learner will be able to: 4.1: Explain Fermi level shift and band bending under bias conditions. (P.I. – 2.1.2 and 2.2.1) (CO4)4.2: Describe the	5

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		<i>working of diodes like LED, Zener, and PIN diode. (P.I. – 1.4.2 and 2.1.2) (CO4)4.3: Analyze the current-voltage characteristics of different p-n junction devices. (P.I. – 3.1.1 and 3.2.1) (CO4)</i>	
5	Engineering Materials and Applications	Learning Objective: Evaluate the properties and applications of modern engineering materials such as liquid crystals, multiferroics, and spintronics.(CO5) Content: Liquid crystals: Nematic, Smectic and cholesteric phases, Liquid crystal display. Multiferroics: Type I & Type II multiferroics and applications. Magnetoresistive Oxides: Magnetoresistance, GMR and CMR materials. Introduction to spintronics. Learning Outcomes: A learner will be able to: 5.1: Describe various types of liquid crystals and their applications. (P.I. – 1.2.2 and 3.1.1) (CO5)5.2: Explain properties and use cases of GMR/CMR materials and multiferroics. (P.I. – 3.3.1 and 5.1.1) (CO5)5.3: Evaluate spintronic materials for futuristic engineering devices. (P.I. – 3.2.2 and 5.2.1) (CO5)	4
6	Lasers	Learning Objective: Illustrate laser working principles and compare the structure and applications of various laser systems. (CO6) Contents: Radiation Matter Interactions, Einstein's coefficients. Basics of Laser- Population inversion, Pumping, Optical Resonator, Metastable state etc. Laser Beam Characteristics. Laser Systems - Ruby laser, He-Ne Laser, Semiconductor Laser, Nd-YAG Laser. Engineering applications of Laser. Learning Outcomes: A learner will be able to: 6.1: Explain the concept of stimulated emission and population inversion. (P.I. – 1.2.2 and 2.1.2) (CO6)6.2: Describe the working of different laser systems. (P.I. – 3.1.1 and 4.3.2) (CO6)6.3: Identify engineering applications of lasers. (P.I. – 3.2.1 and 3.3.2) (CO6)	4
7	Introduction to Quantum Physics	Learning Objective: Explain the fundamental concepts of quantum mechanics including matter waves and Schrödinger's equation. (CO6) Contents: De Broglie hypothesis of matter waves; properties of matter waves. Physical interpretation of wave function Introduction to Schrodinger's equations Learning Outcomes: A learner will be able to: 7.1: State the de Broglie hypothesis and derive the expression for matter waves. (P.I. – 1.2.1 and 2.1.2) (CO2)7.2: Explain the significance of wave function and probability density. (P.I. –	

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		2.1.2 and 2.3.1) (CO2)7.3: Apply Schrödinger's equation to basic quantum systems. (P.I. – 2.4.1 and 2.2.3) (CO2)	
Total			30

Suggested List of Practicals:

Sr No.	Suggested Topic(s)
1.	Determination of diameter of wire/hair or thickness of paper using Wedge shape film method. Learning Outcome: A learner will be able to: Apply interference concept to determine small thickness of a wedge film.CO2 P.I-1.2.1, 2.4.1
2.	Determination of refractive index of water using Newton's Ring. Learning Outcome: A learner will be able to: Analyze Newton's rings to calculate refractive index of a liquid. CO2 P.I.-4.1.2, 4.6.4
3.	Study of Hall Effect. Learning Outcome: A learner will be able to: Apply Hall effect principles to determine carrier type and mobility. CO1 P.I-1.2.1, 2.4.2
4.	Determination of energy band gap of semiconductor. Learning Outcome: A learner will be able to: Calculate the band gap of a semiconductor using temperature vs current graph.CO1 P.I-2.4.1, 2.4.4
5.	Study of I/V characteristics of LED. Learning Outcome: A learner will be able to: Analyze the electrical behavior of an LED to identify threshold voltage.CO1, CO3 P.I.-1.3.1, 2.4.2
6.	Determination of 'h' using Photocell. Learning Outcome: A learner will be able to: Determine Planck's constant using photoelectric effect and graphical analysis.CO5 P.I-2.4.1, 2.4.2
7.	Study of I/ V characteristics of semiconductor diode Learning Outcome: A learner will be able to: Analyze the behavior of a semiconductor diode under forward/reverse bias. CO1 P.I-1.3.1, 2.4.2
8.	Determination of wavelength using Diffraction grating. (Hg/Na source) Learning Outcome: A learner will be able to: Calculate the wavelength of light using diffraction grating and known light sources. CO2 P.I-1.2.1, 4.1.2
9.	Determination of number of lines on the grating surface using LASER Source. Learning Outcome: A learner will be able to: Calculate number of lines on a grating using LASER diffraction.CO3

	P.I-5.2.2
10.	Determination of Numerical Aperture of an optical fibre. Learning Outcome: A learner will be able to: Measure numerical aperture and acceptance angle of a fibre.CO4 P.I- 1.2.1, 2.4.1
11.	Determination of wavelength using Diffraction grating. (Laser source) Learning Outcome: A learner will be able to: Determine wavelength of LASER using diffraction method. CO3 P.I-5.2.2
12.	Study of divergence of laser beam. Learning Outcome: A learner will be able to: Analyze divergence angle of a LASER beam through experimental setup.CO3 P.I-5.2.2
13.	Determination of refractive index of water using Laser source. Learning Outcome: A learner will be able to: Evaluate refractive index of water using angle of incidence/refraction with LASER.CO2 P.I-4.6.2, 4.6.4

Performance Indicators:

P.I. – 1.1.1: Remembering – Recall key mathematical formulas and concepts relevant to engineering problems.

P.I. – 1.2.1: Applying – Apply laws of natural science to an engineering problem.

P.I. – 1.2.2: Understanding – Describe how basic science concepts apply to material behavior and engineering systems.

P.I. – 1.3.1: Remembering – List fundamental engineering principles (e.g., Ohm's law, Bernoulli's equation) and their applications.

P.I. – 1.3.2: Understanding – Explain the relevance of basic engineering principles to real-world problems.

P.I. – 1.4.2: Understanding – Explain the functions of specialized engineering systems in the computer engineering domain.

P.I. – 2.1.2: Understanding – Explain the key features and scope of a complex engineering problem.

P.I. – 2.1.4: Analyzing – Decompose a complex engineering problem into its constituent parts to identify critical aspects.

P.I. – 2.2.1: Analyzing – Identify functionalities and computing resources for the system.

P.I. – 2.2.3: Analyzing – Identify existing solutions or methods to solve the problem.

P.I. – 2.3.1: Applying – Apply engineering principles to formulate modules of a system.

P.I. – 2.4.1: Applying – Apply engineering mathematics to implement the solution.

P.I. – 3.1.1: Defining / Applying – Define a precise problem statement with objectives and scope.

P.I. – 3.2.1: Creating / Evaluating – Explore design alternatives and analyze solutions.

P.I. – 3.2.2: Creating / Evaluating – Produce a variety of potential design solutions.

P.I. – 3.3.1: Evaluating – Perform systematic evaluation of design concepts.

P.I. – 3.3.2: Evaluating / Creating – Consult experts to select the candidate engineering design.

P.I. – 4.3.2: Analyzing – Analyze and interpret data for trends and correlations.

P.I. – 5.1.1: Applying – Use modern tools, techniques, and resources to solve engineering problems.

P.I. – 5.2.1: Applying / Evaluating – Select appropriate software tools for solving computational tasks.

Mapping of Course Outcomes with Learning Outcomes:

Assessment Criteria of Learning Outcomes:

Learning Outcomes: The Learner will:	Assessment Criteria: The Learner can:	Evaluated under ISA/MSE/ESE/LAB
LO1: Implement Basic Data Structures	1.1 Define and explain the purpose of basic data structures such as arrays, stacks, queues, and linked lists.	ISA,LAB,MSE,ESE
	1.2 Demonstrate the creation and initialization of basic data structures in a programming language (e.g., C++, Java, or Python).	ISA,LAB
	1.3 Perform insertion, deletion, and traversal operations on each data structure.	ISA,LAB
	1.4 Evaluate the time and space complexity for basic operations on each data structure.	ISA,MSE
	1.5 Debug and troubleshoot issues in code implementations of basic data structures.	LAB
LO2: Apply Stack and Queue Operations in Real-world Scenarios.	2.1 Implement stack operations to solve mathematical expression problems, such as Infix to Postfix conversion.	ISA,LAB,MSE,ESE
	2.2 Apply queue structures in real-world scenarios such as task scheduling and buffering.	ISA,LAB
	2.3 Demonstrate the use of circular and priority queues with practical examples.	ISA,LAB
	2.4 Analyze and compare the efficiency of stack and queue implementations in different scenarios.	ISA,MSE
	2.5 Test and validate stack and queue implementations to ensure they handle edge cases correctly.	LAB
LO3: Design and Manipulate Linked Lists for Dynamic Data Management.	3.1 Design and implement various types of linked lists, including singly, doubly, and circular linked lists.	ISA,LAB,MSE
	3.2 Perform operations such as insertion, deletion, and traversal on linked lists.	ISA,LAB,MSE
	3.3 Compare linked lists with arrays in terms of memory usage and performance for different operations.	ISA,MSE,ESE

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

	3.4 Apply linked lists in practical applications, such as ordered lists and task management systems.	ISA,MSE,LAB
	3.5 Debug linked list implementations to ensure efficient handling of data and proper memory management.	LAB
LO4: Construct and Analyze Tree Data Structures.	4.1 Construct different types of trees, including binary trees, binary search trees, and AVL trees.	ISA,LAB,MSE,ESE
	4.2 Perform traversal operations (preorder, inorder, postorder) on binary trees.	ISA,LAB,MSE,ESE
	4.3 Implement and analyze binary search tree operations like insertion, deletion, and search.	ISA,LAB
	4.4 Apply trees to solve real-world problems, such as expression trees and Huffman encoding.	ISA,LAB
	4.5 Evaluate the performance of balanced vs. unbalanced trees in terms of time complexity.	LAB
LO5: Implement Graph Algorithms and Hashing Techniques.	5.1 Define and implement graph representations (adjacency list, adjacency matrix) in a programming language.	ISA,LAB,MSE,ESE
	5.2 Apply graph traversal algorithms, such as Depth First Search (DFS) and Breadth First Search (BFS), to solve network-related problems.	ISA,LAB,MSE,ESE
	5.3 Implement Minimum Spanning Tree algorithms (Kruskal's and Prim's) for specific use cases.	ISA,LAB
	5.4 Design and test hash functions, and apply collision resolution techniques like chaining and open addressing.	ISA,LAB
	5.5 Analyze the efficiency of different hashing techniques for data storage and retrieval.	LAB

Tools/ Technologies/ Programming Languages learnt:

- Wedge film setup
- Newton's Rings apparatus
- Diffraction grating (Hg/Na/Laser)
- Optical fiber kit
- Photocell setup
- Semiconductor devices (Diode, LED, Zener, PIN, Schottky, Solar cell)
- Laser systems (Ruby, He-Ne, Semiconductor, Nd-YAG)
- Liquid crystals and LCDs
- Multiferroics and magnetoresistive materials (GMR, CMR)

- Spintronics
- Band theory and Fermi-Dirac tools
- Hall effect setup
- Quantum models and Schrödinger equation
- Python, MATLAB, COMSOL (implied for simulation)

Course Name: Digital Logic Circuit

Course Code: ESC03

Category: BSES_ESC

K-S-A Mapping: Knowledge & Skill

Pre-requisite required: Nil

Pre-requisite for:

- Digital System Design
- Microprocessor and Microcontroller
- Computer Organization and Architecture

Recommended Semester: 3

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
ESC03T	2	--	2	-
ESC03P	-	2	-	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (ESC03T)	15 (~20%)	20 (~30%)	40 (~50%)	75 (100%)
Practical (ESC03P)	25 (50%)	-	25 (50%)	50 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

Digital electronics is fundamental to understanding the design and working of a wide range of applications in variety of fields. In most modern applications, the size is decreasing by employing complex technology while functionality is increasing exponentially. It is essential for engineers to understand fundamental concepts, implementation techniques, and practical applications of digital systems. This course provides comprehensive coverage of digital logic design principles, combinational and sequential circuits, and introduces students to hardware description languages, thus enabling them to use the most appropriate and effective techniques to suit their technical needs.

Course Objectives:

- To understand various number systems, codes and to introduce students to various logic gates, SOP, POS forms and their minimization techniques.
- To teach the working principles of combinational circuits, their applications and implementation using MSI chips.

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

- To teach the fundamentals of sequential logic design, analysis, and design of sequential circuits.
- To understand various counters and shift registers and their design using MSI chips.
- To explain and describe various logic families and Programmable Logic Devices.
- To introduce programming with VHDL hardware description language for digital circuit implementation.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Understand various number systems and apply Boolean algebra for the implementation and minimization of logic functions.	Remember & Apply
CO2	Analyze, design, and implement combinational logic circuits using MSI chips.	Analyze & Apply
CO3	Analyze, design, and implement sequential logic circuits using MSI chips.	Analyze & Create
CO4	Design and implement various counters and shift registers depending on application using MSI chips.	Create & Apply
CO5	Simulate and implement basic combinational and sequential circuits using VHDL HDL.	Create & Apply
CO6	Understand TTL, CMOS logic families, PLDs, CPLD and FPGA architectures.	Understand & Analyze

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Fundamentals of Digital Design	Learning Objective: Introduce fundamental concepts of digital systems including number systems, codes, and Boolean algebra to establish a strong foundation for digital circuit design. (CO1) Contents: Number Systems and Codes: Review of Number System, Binary Code, Binary Coded Decimal, Octal Code, Hexadecimal Code and their conversions. Binary Arithmetic: One's and two's complements. Codes: Excess-3 Code, Gray Code, Weighted code, Parity Code: Hamming Code. Logic Gates and Boolean Algebra: Digital logic gates, Realization using NAND, NOR gates, Boolean Algebra, De Morgan's Theorem, SOP and POS representation, K Map up to four variables. Self-Learning Topics: -Nil- Learning Outcomes: A learner will be able to:	6

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		1.1 Convert between different number systems and understand various coding schemes. (P.I. - 1.1.1, 1.3.1) (CO1) 1.2 Apply Boolean algebra theorems and De Morgan's laws for logic simplification. (P.I. - 1.3.2, 2.2.2) (CO1) 1.3 Design and minimize logic functions using K-maps and implement using basic gates. (P.I. - 2.1.2, 3.2.1) (CO1)	
2	Combinational Circuits	Learning Objective: Enable learners to understand, analyze, and design various combinational logic circuits and their implementation using MSI devices. (CO2) Contents: Arithmetic Circuits: Half adder, Full adder, Ripple carry adder, Carry Look ahead adder, Half Subtractor, Full Subtractor, multiplexer, cascading of Multiplexer, demultiplexer, decoder, Comparator. MSI devices: IC7483, IC74151, IC74138, IC7485 (To be covered in the laboratory). Self-Learning Topics: MSI devices: IC7483, IC74151, IC74138, IC7485 (To be covered in the laboratory). Learning Outcomes: A learner will be able to: 2.1 Design and analyze arithmetic circuits including adders and subtractors. (P.I. - 3.2.2, 3.3.1) (CO2) 2.2 Implement data routing circuits using multiplexers and demultiplexers. (P.I. - 3.4.1, 2.4.2) (CO2) 2.3 Design and implement magnitude comparators and decoders using MSI chips. (P.I. - 3.4.2, 5.2.2) (CO2)	6
3	Elements of Sequential Logic Design	Learning Objective: Develop understanding of sequential logic elements and their characteristics for memory and timing applications. (CO3) Contents: Sequential Logic: Latches and Flip-Flops. Counters: Asynchronous Counters, Synchronous Counters, Up Down Counters, Mod Counters, Ring and Twisted Ring Counters, Shift Registers, Universal Shift Register. Self-Learning Topics: Ring and Twisted Ring Counters, Shift Registers, Universal Shift Register. Learning Outcomes: A learner will be able to: 3.1 Distinguish between different types of latches and flip-flops and their applications. (P.I. - 1.4.2, 2.1.3) (CO3) 3.2 Design and analyze various types of counters and their timing characteristics. (P.I. - 3.2.3, 3.3.2) (CO3) 3.3 Implement shift registers and understand their applications in data processing. (P.I. - 3.4.1, 2.4.3) (CO3)	8
4	Sequential Logic Design	Learning Objective: Guide learners to master advanced sequential logic design techniques including state machine design and MSI applications. (CO4) Contents: Sequential Logic Design: Mealy and Moore Machines, clocked synchronous state machine analysis. State reduction techniques using implication chart method and state assignment,	6

Electronics and Computer Science

		sequence detector. Sequential logic design practices: MSI counters (7490, 7493, 74163, 74169) and applications, MSI Shift registers (74194) and their applications (To be covered in the laboratory). Self-Learning Topics: MSI counters (7490, 7493, 74163, 74169) and applications, MSI Shift registers (74194) and their applications Learning Outcomes: A learner will be able to: 4.1 Design finite state machines using Mealy and Moore models. (P.I. - 3.2.2, 3.4.2) (CO4) 4.2 Apply state reduction and assignment techniques for optimal design. (P.I. - 3.3.1, 2.4.2) (CO4) 4.3 Implement practical applications using MSI counters and shift registers. (P.I. - 3.4.3, 5.2.2) (CO4)	
5	Introduction to VHDL	Learning Objective: Introduce hardware description language concepts and enable learners to model digital circuits using VHDL. (CO5) Contents Introduction: Overview of different design styles Design and implementation of adder, subtractor, multiplexer and flip flop using VHDL Self-Learning Topics: -Nil- Learning Outcomes: A learner will be able to: 5.1 Understand different design methodologies and modeling styles in VHDL. (P.I. - 1.3.1, 1.4.2) (CO5) 5.2 Write VHDL code for combinational circuits including arithmetic and data routing circuits. (P.I. - 3.2.3, 3.4.1) (CO5) 5.3 Model sequential circuits and verify functionality through simulation. (P.I. - 3.4.3, 5.3.2) (CO5)	2
6	Programmable Logic Devices	Learning Objective: Enable learners to understand various programmable logic technologies and interfacing techniques. (CO6) Contents: Concepts of PROM, PAL and PLA. Interfacing CMOS to TTL and TTL to CMOS. Architecture of CPLD, FPGA. Self-Learning Topics: CMOS to TTL and TTL to CMOS. Architecture of CPLD, FPGA. Learning Outcomes: A learner will be able to: 6.1 Understand the architecture and applications of various programmable logic devices. (P.I. - 1.4.1, 2.1.2) (CO6) 6.2 Design interfacing circuits between different logic families. (P.I. - 3.2.1, 3.4.2) (CO6) 6.3 Compare CPLD and FPGA architectures and select appropriate device for applications. (P.I. - 2.4.3, 3.1.4) (CO6)	2
Total			30

Suggested List of Practicals:

Sr No.	Suggested Topic(s)
1.	Learning Objective: Familiarize learners with Boolean algebra and logic simplification techniques. (CO1) Contents: Simplification of Boolean functions using algebraic methods and K-maps. Learning Outcomes: A learner will be able to: 1.1 Apply Boolean theorems and K-map techniques for function minimization. → P.I.: 2.2.2 (Generate solutions), 3.2.1 (List design approaches) (CO1) 1.2 Verify simplified expressions through truth table analysis. → P.I.: 5.3.2 (Verify results), 2.4.2 (Analyze results) (CO1)
2.	Learning Objective: Enable learners to implement logic functions using universal gates. (CO1) Contents: Design AND, OR, NOT, EXOR, EXNOR gates using Universal gates: NAND and NOR. Learning Outcomes: A learner will be able to: 2.1 Implement basic logic gates using NAND and NOR gates only. → P.I.: 3.4.2 (Implement modules), 3.2.3 (Propose concepts) (CO1) 2.2 Verify the functionality of universal gate implementations. → P.I.: 3.4.3 (Validate design), 5.2.2 (Use tools) (CO1)
3.	Learning Objective: Develop skills in code conversion circuit implementation. (CO1) Contents: Implement digital circuits to perform Binary to Gray and Gray to Binary operations. Learning Outcomes: A learner will be able to: 3.1 Design code conversion circuits using logic gates. → P.I.: 3.2.2 (Generate solutions), 3.4.1 (Refine design) (CO1) 3.2 Test and validate code conversion functionality. → P.I.: 2.4.2 (Interpret results), 5.3.2 (Validate outputs) (CO1)
4.	Learning Objective: Apply combinational logic design principles for arithmetic circuits. (CO2) Contents: Implement Half adder, Full adder, Half subtractor and Full subtractor circuits. Learning Outcomes: A learner will be able to: 4.1 Design and implement basic arithmetic circuits. → P.I.: 3.2.2 (Generate solutions), 3.4.2 (Implement modules) (CO2) 4.2 Analyze carry propagation and timing characteristics. → P.I.: 2.4.3 (Identify limitations), 3.3.1 (Evaluate designs) (CO2)
5.	Learning Objective: Demonstrate the use of MSI chips for arithmetic operations. (CO2) Contents: Design and implement adder and subtractor using 4-bit Binary Adder IC-7483. Learning Outcomes: A learner will be able to: 5.1 Utilize MSI chips for complex arithmetic operations. → P.I.: 3.4.2 (Implement modules), 5.2.2 (Use tools) (CO2) 5.2 Configure MSI devices for different arithmetic functions. → P.I.: 3.4.1 (Refine design), 2.4.1 (Implement solution) (CO2)
6.	Learning Objective: Apply multiplexer concepts for logic function implementation. (CO2) Contents: Implement logic equations using Multiplexer IC 74151. Learning Outcomes: A learner will be able to: 6.1 Implement Boolean functions using multiplexer technique. → P.I.: 3.2.3 (Propose concepts), 3.4.2 (Implement modules) (CO2)

	6.2 Optimize logic implementations using data selectors. → P.I.: 3.1.4 (Choose attributes), 3.3.2 (Explain trade-offs) (CO2)
7.	Learning Objective: Develop understanding of comparison circuits using MSI devices. (CO2) Contents: Design and implement Magnitude Comparator using IC 7485. Learning Outcomes: A learner will be able to: 7.1 Implement magnitude comparison using MSI comparator chips. → P.I.: 3.4.2 (Implement modules), 5.2.2 (Use tools) (CO2) 7.2 Cascade comparators for multi-bit comparison operations. → P.I.: 3.4.1 (Refine design), 2.4.2 (Analyze results) (CO2)
8.	Learning Objective: Understand the behavior and applications of different flip-flop types. (CO3) Contents: Verify truth table of different types of flip flops using hardware and software Logisim. Learning Outcomes: A learner will be able to: 8.1 Analyze the truth tables and timing characteristics of various flip-flops. → P.I.: 2.4.2 (Interpret results), 1.4.2 (Explain functions) (CO3) 8.2 Compare different flip-flop types and their applications. → P.I.: 3.3.2 (Explain trade-offs), 2.1.4 (Decompose problems) (CO3)
9.	Learning Objective: Apply flip-flop conversion techniques for sequential circuit design. (CO3) Contents: Flip flop conversions JK to D, JK to T and D to T FF using Logisim. Learning Outcomes: A learner will be able to: 9.1 Design conversion circuits between different flip-flop types. → P.I.: 3.2.2 (Generate solutions), 3.4.1 (Refine design) (CO3) 9.2 Simulate and verify flip-flop conversion functionality. → P.I.: 3.4.3 (Validate design), 5.3.2 (Verify outputs) (CO3)
10.	Learning Objective: Implement counter circuits using MSI devices for various applications. (CO4) Contents: Design asynchronous/synchronous MOD N counter using ICs (7490, 7493, 74163, 74169). Learning Outcomes: A learner will be able to: 10.1 Design and implement various types of counters using MSI chips. → P.I.: 3.2.3 (Propose concepts), 3.4.2 (Implement modules) (CO4) 10.2 Modify counter modulus and analyze timing characteristics. → P.I.: 3.4.1 (Refine design), 2.4.3 (Identify limitations) (CO4)
11.	Learning Objective: Introduce VHDL HDL programming for digital logic implementation. (CO5) Contents: Write VHDL simulation code for different logic gates. Learning Outcomes: A learner will be able to: 11.1 Write basic VHDL code for logic gate implementation. → P.I.: 3.2.3 (Propose concepts), 3.4.2 (Implement modules) (CO5) 11.2 Simulate and verify logic gate behavior using VHDL testbenches. → P.I.: 3.4.3 (Validate design), 5.3.2 (Verify results) (CO5)
12.	Learning Objective: Apply VHDL HDL for combinational arithmetic circuit modeling. (CO5) Contents: Write VHDL simulation code for combinational arithmetic circuits. Learning Outcomes: A learner will be able to: 12.1 Model arithmetic circuits using VHDL behavioral and structural descriptions. → P.I.: 3.2.2 (Generate solutions), 3.4.1 (Refine design) (CO5) 12.2 Develop comprehensive testbenches for arithmetic circuit verification. → P.I.: 3.4.3 (Validate design), 2.4.2 (Interpret results) (CO5)

13.	Learning Objective: Implement sequential circuits using VHDL HDL constructs. (CO5) Contents: Write VHDL simulation code for Flip-Flops and sequential circuits. Learning Outcomes: A learner will be able to: 13.1 Model sequential logic elements using VHDL always blocks. → P.I.: 3.2.3 (Propose concepts), 3.4.2 (Implement modules) (CO5) 13.2 Implement clocking and reset strategies in sequential VHDL designs. → P.I.: 3.4.1 (Refine design), 3.3.1 (Evaluate designs) (CO5)
14.	Learning Objective: Develop complex combinational circuits using VHDL HDL. (CO5) Contents: Write VHDL simulation code for 4:1 Multiplexer, 2-to-4-line binary decoder. Learning Outcomes: A learner will be able to: 14.1 Implement data routing and selection circuits in VHDL. → P.I.: 3.2.2 (Generate solutions), 3.4.2 (Implement modules) (CO5) 14.2 Create parameterized and scalable VHDL designs. → P.I.: 3.1.4 (Choose attributes), 3.4.3 (Validate design) (CO5)

Performance Indicators:

- P.I.- 1.1.1: Remembering:** Recall key mathematical formulas and concepts relevant to digital systems and Boolean algebra.
- P.I.- 1.3.1: Remembering:** List fundamental digital logic principles and their applications in circuit design.
- P.I.- 1.3.2: Understanding:** Explain the relevance of Boolean algebra and digital logic principles to real-world applications.
- P.I.- 1.4.1: Understanding:** Describe the basic functions of digital systems and logic families.
- P.I.- 1.4.2: Understanding:** Explain the functions of specialized digital circuits and programmable logic devices.
- P.I.- 2.1.2: Understanding:** Explain the key features and scope of digital circuit design problems.
- P.I.- 2.1.3: Applying:** Use standard problem-identification techniques to define digital design challenges.
- P.I.- 2.1.4: Analyzing:** Decompose complex digital systems into constituent functional blocks.
- P.I.- 2.2.2: Understanding:** Describe principles and methodologies for Boolean function minimization.
- P.I.- 2.4.1: Applying:** Implement solutions for digital circuit design problems.
- P.I.- 2.4.2: Analyzing:** Interpret results from digital circuit analysis and simulation.
- P.I.- 2.4.3: Analyzing:** Identify limitations and constraints in digital circuit implementations.
- P.I.- 3.1.4: Analyzing:** Choose appropriate design attributes for digital system optimization.
- P.I.- 3.2.1: Remembering:** List potential design approaches and tools for digital circuit implementation.
- P.I.- 3.2.2: Understanding:** Describe principles for generating alternative digital design solutions.
- P.I.- 3.2.3: Applying:** Propose multiple design concepts addressing digital system requirements.
- P.I.- 3.3.1: Remembering:** Identify evaluation criteria for comparing digital design solutions.
- P.I.- 3.3.2: Understanding:** Explain trade-offs in selecting digital design implementations.
- P.I.- 3.4.1: Applying:** Refine digital circuit designs based on performance requirements.
- P.I.- 3.4.2: Applying:** Implement digital circuit modules using appropriate technologies.
- P.I.- 3.4.3: Evaluating:** Validate digital design functionality through testing and simulation.
- P.I.- 5.2.2: Applying:** Use discipline-specific tools for digital circuit design and simulation.
- P.I.- 5.3.2: Evaluating:** Verify and validate digital circuit outputs and performance.

Assessment Criteria of Learning Outcomes:

Learning Outcomes: The Learner will:	Assessment Criteria: The Learner can:	Evaluated under ISA/MSE/ESE/LAB
LO1: Understand number systems, codes, and simplify logic functions using Boolean algebra and Karnaugh maps.	1.1 Convert between different number systems and understand various coding schemes.	ISA, MSE
	1.2 Apply Boolean algebra theorems and De Morgan's laws for logic simplification.	ISA, MSE

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

	1.3 Design and minimize logic functions using K-maps and implement using basic gates.	ISA, LAB, MSE
LO2: Analyze and design combinational circuits using logic gates and MSI devices.	2.1 Design and analyze arithmetic circuits including adders and subtractors.	ISA, LAB, MSE
	2.2 Implement data routing circuits using multiplexers and demultiplexers.	ISA, LAB, MSE, ESE
	2.3 Design and implement magnitude comparators and decoders using MSI chips.	ISA, LAB, MSE, ESE
LO3: Understand and design sequential circuits using flip-flops, counters, and shift registers.	3.1 Distinguish between different types of latches and flip-flops and their applications.	ISA, LAB, MSE
	3.2 Design and analyze various types of counters and their timing characteristics.	ISA, LAB, MSE, ESE
	3.3 Implement shift registers and understand their applications in data processing.	ISA, LAB, MSE, ESE
LO4: Apply state machine design concepts for implementing sequential systems using MSI chips.	4.1 Design finite state machines using Mealy and Moore models.	ISA, LAB, MSE
	4.2 Apply state reduction and assignment techniques for optimal design.	ISA, MSE
	4.3 Implement practical applications using MSI counters and shift registers.	ISA, LAB, MSE, ESE
LO5: Write and simulate digital circuits using VHDL HDL for combinational and sequential designs.	5.1 Understand different design methodologies and modelling styles in VHDL.	ISA, MSE
	5.2 Write VHDL code for combinational circuits including arithmetic and data routing circuits.	ISA, LAB, MSE, ESE
	5.3 Model sequential circuits and verify functionality through simulation.	LAB
LO6: Understand programmable logic devices and their architectures.	6.1 Understand the architecture and applications of various programmable logic devices.	ISA, MSE
	6.2 Design interfacing circuits between different logic families.	ISA, LAB, MSE
	6.3 Compare CPLD and FPGA architectures and select appropriate device for applications.	ISA, MSE, ESE

Course Name: Engineering Mechanics

Course Code: ESC02T & ESC02P

Vertical/ Sub-Vertical: BSES_ESC

K-S-A Mapping: Knowledge & Skill

Pre-requisite required: Nil

Pre-requisite for: Computer Graphics, Robotics and Biological Modelling and Simulation

Recommended Semester: 1

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
ES02T	2	-	2	-
ES02P	-	2	-	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (ES02T)	15 (~20%)	20 (~30%)	40 (~50%)	75 (100%)
Practical (ES02P)	25 (50%)	-	25 (50%)	50 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

To improve the skill sets of students for understanding forces and motions associated with particles and rigid bodies. This course also imparts and inculcates students to understand force system and its effects.

Course Objectives:

- To develop a fundamental understanding of force systems and their applications in engineering structures and machines.
- To enhance the ability to apply concepts of equilibrium, free-body diagrams, and support reactions for analysing static systems.
- To enable learners to compute centroids of simple and composite shapes and understand their practical implications in structural design.
- To impart knowledge on the laws of friction and its applications in mechanical systems, emphasizing real-life engineering scenarios.
- To provide an in-depth understanding of particle motion and its types, enabling learners to apply kinematic equations in various engineering and technological contexts.
- To introduce the motion analysis of rigid bodies using concepts like Instantaneous Centre of Rotation (ICR) and relate angular and linear velocities.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Ability to understand and analyse forces, force systems and equilibrium.	<i>Understand & Analyse</i>
CO2	Understand and verify law of Moments	<i>Understand & Apply</i>
CO3	Determine the centroid of plane lamina	<i>Apply</i>
CO4	Understand and apply basic concepts of Kinematics of particles and kinematics of rigid bodies.	<i>Understand & Apply</i>
CO5	Evaluate co-efficient of friction between the different surfaces in contact	<i>Evaluate</i>

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	System of Coplanar Forces	Learning Objective: This topic provides learner with the knowledge to find the resultant of a Coplanar force system. (CO1, CO2). Contents: Introduction to Force and Force systems (Concurrent, Parallel and General coplanar force system), resolution composition and resultant of force systems. Principle of transmissibility of a force, Moment of force about a point, Couples, Varignon's Theorem. Force couple system Self-Learning Topics: Newton's Laws of Motion Learning Outcomes: A learner will be able to: 1.4 Analyze and resolve different types of coplanar force systems. (PI 1.1.1) (CO1) 1.5 Apply the principle of transmissibility and calculate moment of force and couples. (PI 2.1.3) (CO2) 1.6 Determine resultant of concurrent, parallel, and general force systems using analytical methods. (PI 2.2.3) (CO1) 1.7 Use Varignon's Theorem to simplify moment calculations. (PI 1.3.2) (CO2) 1.8 Relate Newton's Laws of Motion to static force systems. (PI 1.1.1) (CO1)	6
2	Centroid	Learning Objective: This topic provides knowledge of centroid of plane area. (CO3) Contents: First moment of Area, Centroid of Regular composite plane Laminas	4

		Self-Learning Topics: NIL Learning Outcomes: A learner will be able to: 2.4 Compute the centroid of regular and composite laminas using the concept of the first moment of area. (PI 1.1.1) (CO3) 2.5 Develop mathematical models for centroidal calculations. (PI 2.3.4) (CO3) 2.6 Solve real-life problems involving centroid locations (e.g., stability of structures). (PI 3.1.3) (CO3) 2.7 Apply the concept of centroid to structural and mechanical applications. (PI 1.3.2) (CO3)	
3	Equilibrium	Learning Objective: On completion of this topic, students will be able to define the concept of equilibrium, understand various types of supports, and explain different types of loads. (CO1, CO2) Contents: Equilibrium of rigid beams: Free body diagrams. Conditions of equilibrium. Types of supports & types of loads. Determination of supports reactions for different types of loads on the beams. Learning Outcomes: A learner will be able to: 3.2 Draw free-body diagrams for various support conditions. (PI 2.1.3) (CO1, CO2) 3.3 Identify and classify types of supports and loads in a system. (PI 1.3.2) (CO1, CO2) 3.4 Analyze equilibrium conditions of beams under various loading systems. (PI 2.2.3) (CO1, CO2) 3.5 Calculate support reactions using conditions of equilibrium. (PI 2.3.4) (CO1, CO2) 3.6 Correlate theoretical results with practical structural applications. (PI 5.2.6) (CO1, CO2)	5
4	Friction	Learning Objective: On completion of this topic, students will be able to understand the concept of friction, evaluate the frictional forces needed for static equilibrium, and recognize its significance in everyday applications. (CO5). Content: Coefficient of static and dynamic friction, Laws of friction, Angle of Friction, Angle of Repose. Concept of Cone of friction. Equilibrium of bodies on horizontal & inclined plane. Learning Outcomes: A learner will be able to:	4

		4.1 Understand and differentiate between static and dynamic friction. (PI 1.1.1) (CO 5) 4.2 Apply laws of friction in analyzing equilibrium on horizontal and inclined planes. (PI 2.2.3) (CO5) 4.3 Evaluate the coefficient of friction and its effect on motion and design. (PI 3.2.4) (CO 5) 4.4 Use real-world case studies to appreciate design considerations involving friction. (PI 6.1.5) (CO 5) 4.5 Utilize simulation tools to visualize frictional effects. (PI 5.2.6) (CO 5)	
5	Kinematics of particles	Learning Objective: This topic provides knowledge of the geometry of motion, enabling students to analyze various types of motion and apply this understanding in contexts such as video game development. (CO4). Content: Uniformly accelerated motion along straight line, motion under gravity, Projectile Motion Learning Outcomes: A learner will be able to: 5.1 Analyze rectilinear motion with uniform and non-uniform acceleration. (PI 1.2.2) (CO 4) 5.2 Apply equations of motion to particles under gravity. (PI 2.2.3) (CO 4) 5.3 Evaluate projectile motion and trajectory paths. (PI 3.2.4) (CO 4) 5.4 Solve kinematic problems using analytical and graphical approaches. (PI 2.3.4) (CO 4) 5.5 Relate motion concepts to applications such as gaming, automation, or ADAS systems. (PI 6.2.5) (CO 4)	7
6	Kinematics of rigid bodies	Learning Objective: This topic provides knowledge of the geometry of motion, enabling students to locate the Instantaneous Centre of Rotation (ICR) and establish the relationship between linear and angular velocity. (CO4). Contents: Introduction to different types of motion a Rigid body performs viz. Translation, Rotation and General Plane motion. Concept of Instantaneous Centre of rotation (ICR) for the finding velocity. Locating ICR for multiple link mechanism. Velocity analysis of rigid body using ICR. Learning Outcomes: A learner will be able to: 6.1 Classify types of rigid body motion: translation, rotation, and general plane motion. (PI 1.3.2) (CO 4)	4

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		6.2 Locate the Instantaneous Centre of Rotation (ICR) for velocity analysis. (PI 2.2.3) (CO 4) 6.3 Apply velocity analysis methods to multi-link mechanisms. (PI 3.2.4) (CO 5) 6.4 Correlate angular and linear motion in rigid bodies. (PI 2.3.4) (CO 4) 6.5 Use ICR concepts in real-life applications such as robotics or vehicle systems. (PI 6.2.5) (CO 4)	
Total			30

Suggested List of Practicals:

Sr No.	Suggested Topic(s)
1.	Verification of principle of moment / Bell crank lever using simulation software Learning Outcomes: <i>A learner will be able to verify the principle of moments and analyze torque in practical systems. (P.I. – 1.4.1 and 2.1.3) (CO 2)</i>
2.	Determination of support reactions of simply supported beam using simulation software Learning Outcomes: <i>A learner will be able to analyse support conditions and calculate reactions for beams. (P.I. – 2.1.3 and 2.1.4) (CO 1).</i>
3.	Determination of coefficient of friction using inclined plane method Learning Outcomes: <i>A learner will be able to determine and analyze frictional forces acting on inclined surfaces. (P.I. – 2.2.2 and 2.1.3) (CO 5).</i>
4.	Projectile Motion – By using simulation software Learning Outcomes: <i>A learner will be able to analyze the motion of particles under gravity and determine projectile parameters. (P.I. 1.3.2 and 2.1.2) (CO 4)</i>
5.	Verification of Law of Polygon of Coplanar Concurrent Forces Learning Outcomes: <i>A learner will be able to apply polygon laws to solve coplanar force systems. (P.I. – 1.4.1 and 2.2.3) (CO 1)</i>
6.	Determine the Centroid of plane lamina using simulation software Learning Outcomes: <i>A learner will be able to compute centroids of various plane shapes and composite laminas. (P.I. - 1.4.2 and 1.3.1) (CO 3)</i>
7.	Determination of coefficient of kinetic friction using D-Alembert Principle Learning Outcomes: <i>A learner will be able to apply D'Alembert's Principle for dynamic friction analysis. (P.I. – 2.2.2. and 2.1.2) (CO 5)</i>
8	Determination of stiffness of spring Learning Outcomes: <i>A learner will be able to determine stiffness using load-deformation characteristics. (P.I. – 1.3.2. and 2.1.4) (CO 1)</i>
9	Verification of Law of Polygon of Coplanar Non-Concurrent & Non-Parallel Forces Learning Outcomes: <i>A learner will be able to analyze and resolve general force systems using graphical methods. (P.I. – 2.1.4. and 2.2.3) (CO 1)</i>
10	Motion Curves – By using simulation software Learning Outcomes: <i>A learner will be able to interpret velocity-time and acceleration-time curves for linear motion. (P.I. – 1.4.4. and 1.3.2) (CO 4)</i>

Performance Indicators:

- P.I. – 1.1.1: **Remembering**: Recall key mathematical formulas and concepts relevant to engineering problems.
- P.I. – 1.2.2: **Understanding**: Interpret physical meaning and mathematical representation of engineering concepts.
- P.I. 1.3.2: **Understanding**: Demonstrate understanding of engineering concepts through appropriate application in problem-solving.
- P.I. – 1.3.2: **Understanding**: Illustrate engineering principles using examples, diagrams, or simulations.
- P.I. – 1.4.3: **Applying**: Conduct experiments or use simulation tools to validate engineering principles.
- P.I. – 1.4.4: **Analyzing**: Analyze results obtained from experiments or simulations for interpretation and validation.
- P.I. – 2.1.3: **Applying**: Apply fundamental engineering and scientific principles to analyze real-world force systems.
- P.I. – 2.1.4: **Analyzing**: Analyze systems using engineering fundamentals like equilibrium and motion.
- P.I. – 2.1.3: **Applying**: Develop and interpret free body diagrams and apply to static systems.
- P.I. – 2.1.3: **Applying**: Use suitable mathematical tools and methods to solve force and motion-related problems.
- P.I. – 2.2.3: **Applying**: Solve particle motion problems using appropriate equations of motion.
- P.I. – 2.2.3: **Applying**: Analyze forces considering friction and dynamic conditions.
- P.I. – 2.2.4: **Analyzing**: Solve and interpret force and motion problems involving multiple force systems.
- P.I. – 2.3.4: **Analyzing**: Construct and solve mathematical models for mechanical and structural systems.
- P.I. – 3.1.3: **Applying**: Apply engineering knowledge to assess centroid and stability in real-life systems.
- P.I. – 3.2.4: **Analyzing**: Apply motion analysis to dynamic systems like linkages and rigid bodies.
- P.I. – 3.2.5: **Evaluating**: Evaluate effects of friction or projectile motion in system design or operation.
- P.I. – 5.2.6: **Creating**: Use modern tools or simulations to visualize and verify engineering solutions.
- P.I. – 6.1.5: **Evaluating**: Assess the significance of friction, stability, and safety in societal or design context.
- P.I. – 6.2.5: **Evaluating**: Relate engineering mechanics concepts to applications in technology or industry (e.g., robotics, gaming, ADAS).

Mapping of Course Outcomes with Learning Outcomes:

	Mapped to Learning Outcomes
CO1	1.1.1, 1.3.1, 2.1.2, 2.2.3, 2.3.2, 5.2.1
CO2	1.3.1, 2.1.1, 2.1.2, 2.2.3, 2.3.2, 5.2.1
CO3	1.1.1, 1.3.1, 2.3.2, 3.1.5
CO4	1.1.1, 2.2.3, 3.2.3, 5.2.1, 6.1.1
CO5	1.2.2, 1.3.1, 2.2.1, 2.2.2, 2.3.2, 3.2.1, 3.2.3, 6.2.1

Assessment Criterion of the Learning Outcomes:

Learning Outcomes: The Learner will:	Assessment Criteria: The Learner can:	Evaluated under ISA/MSE/ESE/LAB
LO 1.1: Analyze and resolve different types of coplanar force systems. (P.I.- 1.1.1) (CO1)	- Identify types of coplanar force systems (concurrent, parallel, general). - Resolve force systems	ISA, MSE

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

	graphically and analytically. • Calculate resultants using vector methods. • Interpret real-life situations using coplanar force systems.	
LO 1.4: Navigate CAD software interface, menu systems, and toolbars. (P.I.- 1.4.2) (CO1)	• Open CAD software and locate interface components. • Use menu and toolbar options to initiate a new drawing. • Demonstrate a simple CAD sketch with basic tools. • Save, modify, and print a simple CAD file.	LAB, ISA
LO 2.1: Compute the centroid of regular and composite laminas. (P.I.- 1.1.1) (CO3)	• Define the concept of centroid and first moment of area. • Use standard formulas to calculate centroid of composite shapes. • Apply symmetry to reduce calculations. • Explain practical applications in structural design.	MSE, ESE
LO 3.1: Draw free-body diagrams for support conditions. (P.I.- 2.1.3) (CO1, CO2)	• Identify all forces acting on a structure. • Use standard symbols for supports and loads. • Label all dimensions and directions of forces correctly. • Construct free-body diagrams for different beams.	ISA, MSE
LO 4.1: Understand and differentiate between static and dynamic friction. (P.I.- 1.1.1) (CO5)	• Define and compare static vs. dynamic friction. • Identify situations involving both types of friction. • Explain real-world examples of friction in design. • Interpret effects of friction on motion.	ISA, MSE, LAB
LO 5.1: Analyze rectilinear motion with uniform and non-uniform acceleration. (P.I.- 1.2.2) (CO4)	• Define acceleration and types of motion. • Solve numerical problems on uniformly accelerated motion. • Sketch motion graphs for given scenarios. • Apply concepts to objects falling under gravity.	ISA, MSE, ESE
LO 6.1: Locate the Instantaneous Centre of	• Define ICR and its role in velocity analysis. • Identify ICR in link	ISA, MSE, LAB

Rotation (ICR). (P.I.- 2.2.3) (CO4)	mechanisms. • Use ICR to relate angular and linear velocities. • Solve practical problems using ICR method.

Preamble:

Structured Programming is a foundational course designed to introduce the principles of programming and problem-solving using the C language. As one of the most widely used and efficient programming languages, C provides a strong base for understanding core concepts such as data types, control flow, functions, arrays, pointers, and file handling.

This course emphasizes a structured approach to programming—focusing on clarity, modularity, and maintainability. It equips students with the ability to write efficient, error-free, and logically organized code, which is essential for developing software in engineering and real-world applications.

It lays the groundwork for future studies in data structures, algorithms, operating systems, embedded systems, and other technical domains that rely on C or its derivatives.

Course Objectives:

- To familiarize students with the syntax, semantics, and foundation concepts of the C programming language.
- To develop structured programming and logical problem-solving abilities.
- To introduce modular programming using functions and various data types like arrays, strings and structures.

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

- To Equip students with skills to handle pointer manipulation, dynamic memory allocation and file operations.
- Prepare students to write efficient and reusable code for solving real world engineering problems.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Explain the syntax and semantics of C programming constructs such as identifiers, variables, data types, operators, input/output functions and control structures.	Understand
CO2	Develop logic using conditional and iterative control structures.	Apply
CO3	Decompose the problem and solve it using modular programming approach.	Analyse
CO4	Implement algorithms using arrays, strings, pointers, and structures in C.	Analyse
CO5	Perform file operations and dynamic memory allocation to handle data processing and storage requirements in software applications.	Evaluate
CO6	Integrate debugging and testing methodologies using standard development tools to ensure degree of correctness.	Evaluate

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Fundamentals of C	Learning Objective: Introduce the concept of data types, type conversion, operators, in-built mathematical functions and the generic C program structure. (CO1). Contents: Character Set, Identifiers and Keywords, Data Types, Constants and Variables Operators, Math Library Functions, Expressions, Pre-processor Directives. Self-Learning Topics: Frequently used mathematical library functions Learning Outcomes: A learner will be able to: 1.9 Describe syntax, keywords, data types and variables. (P.I. – 1.3.1) (CO1) 1.10 Use appropriate operators in expressions to perform various calculations and operations. (P.I. 1.3.2) (CO1) 1.11 Use math library functions to perform mathematical computations within C programs. (P.I. 1.3.3) (CO1) 1.12 Explain the purpose of preprocessor directives. (P.I. 1.3.2) (CO1)	4
2	Input and Output	Learning Objective: Understand the format specifiers and their utility in input/output functions (CO1, CO6) Contents:	2

		Unformatted and formatted I/O, scanf(), printf() functions, concept of field width, precision and flags and basic programs on computation. Self-Learning Topics: Format specifiers, flags and their effect Learning Outcomes: A learner will be able to: 2.8 Use appropriate format specifiers for various data types in both input and output operations. (P.I. – 1.3.2 (CO1) 2.9 Collaborate with peers to debug and improve computational programs, applying learned concepts effectively. (P.I. – 2.1.3, 9.2.1) (CO1, CO6)	
3	Control Structures	Learning Objective: To design and implement control flow in C programs using conditional statements (if-else, nested if-else, switch-case), looping constructs (for, while, do-while), and control statements (break, continue). They will also be able to apply nested loops to solve complex programming problems efficiently. (CO1, CO2, CO6) Contents: Conditional Branching – if else statement, nested if else statement, Switch case statement, Looping – for loop, while loop and do while loop, Nesting of loops, use of unconditional branching using break and continue statement Self-Learning Topics: Mathematical concepts like natural numbers, sum of first n natural numbers, Armstrong, Magic, Strong Numbers, Fibonacci series. Learning Outcomes: A learner will be able to: 3.7 Analyse the flow of control in programs using selection statements to make decisions based on specific conditions. (P.I. – 2.1.2) (CO1, CO2) 3.8 Implement multi-choice logic using switch statements to manage multiple options conditions effectively. (P.I. 2.1.2) (CO1, CO2) 3.9 Illustrate the syntax and use cases for each type of loop, explaining when to use one over the others. (P.I. – 2.1.2) (CO1, CO2) 3.10 Analyse loop control mechanisms (break, continue) and their effect on loop execution. (P.I. - 2.1.2) (CO2, CO6) 3.11 Integrate selection and looping statements in C programs to solve more complex problems. (P.I. – 2.2.3) (CO2, CO6).	6
4	Functions	Learning Objective: To create and use functions in C, including passing arguments and managing return values, understand the scope of variables (local and global), utilize different storage classes (auto, extern, static, register), and implement recursive functions to solve problems involving repeated computation. (CO1, CO3, CO6) Content: Introduction to functions Declaration and definition of functions, calling a function and passing argument to a function, concept of global and local variables, Storage classes – auto, extern, static and register, recursive Functions	6

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		Self-Learning Topics: Decomposition of problems in to sub tasks. Learning Outcomes: A learner will be able to: 4.1 Write function declarations and definitions to modularize C programs effectively. (P.I. – 1.3.3, 2.2.3) (CO1, CO3) 4.2 Demonstrate how to divide the problem into subproblems and propose a function to address a subproblem (P.I. –2.1.4) (CO3, CO6) 4.3 Identify and apply appropriate storage classes (auto, extern, static, register) to control variable lifetime and linkage. (P.I. - 2.1.2) CO3) 4.4 Compare recursive and iterative approaches to problem-solving and justify the selection of one over the other based on context. (P.I. – 2.2.3) (CO1, CO3, CO6)	
5	Arrays, Strings and Structures	Learning Objective: To declare, initialize, and manipulate one-dimensional and multi-dimensional arrays, perform operations on strings using built-in and user-defined functions, and design and implement structures—including nested structures and arrays of structures—to manage grouped data efficiently in C programs. (CO2, CO3, CO4, CO6). Content: Array-Concepts, Declaration, Definition, Accessing array element, One-dimensional and Multidimensional array. String- Basic of String, Array of String, Functions in string.h Structure- Declaration, Initialization, Nested structure, Operation on structures, Array of Structure. Self-Learning Topics: Functions for string and character processing, Concepts of Matrix multiplication, Matrix transform, Symmetric Matrix , Upper and Lower triangular matrix. Learning Outcomes: A learner will be able to: 5.6 Declare, initialize, and manipulate one-dimensional and multidimensional arrays to store and process data efficiently. (P.I. – 1.3.1, 2.1.2) (CO2, CO4) 5.7 Implement string operations using standard library functions from <string.h> and construct programs that manipulate arrays of strings. ((P.I. – 2.2.3) (CO2, CO4) 5.8 Define and use structures, including nested structures, to represent complex data types in C. (P.I. – 1.3.2) (CO2, CO4) 5.9 Create and manage arrays of structures to handle grouped data, and perform operations such as sorting, searching, and updating structure members. (P.I.- 2.2.3) (CO2, CO3, CO4, CO6)	6
6	Pointers and Files	Learning Objective: To demonstrate the use of pointers in C for referencing, dereferencing, pointer arithmetic, and dynamic memory allocation, apply pointer concepts to arrays, functions, and perform file operations, including creating, opening, reading, writing, and processing files using standard I/O functions. (CO1, CO4, CO5, CO6). Contents:	6

		Pointer introduction, pointer variable, reference and dereference, operators and void pointer, Pointer call by reference, pointer arithmetic, pointer to pointer, pointer and array, passing arrays to function, array of pointers and dynamic memory allocation, Types of files, file operations – opening, closing, creating, reading and processing file Self-Learning Topics: File Operations. Learning Outcomes: A learner will be able to: 6.6 Explain the concept of pointers, including referencing, dereferencing, and the use of pointer operators. (P.I. – 1.3.2) (CO1, CO4) 6.7 Apply pointers for call-by-reference, and pointer arithmetic in solving programming problems. (P.I. – 2.2.3) (CO1, CO4) 6.8 Use pointers effectively with arrays, including passing arrays to functions and working with arrays of pointers. (P.I. – 1.3.4) (CO4, CO6) 6.9 Implement dynamic memory allocation using functions like malloc(), calloc(), realloc(), and free() to manage memory during runtime. (P.I. – 2.4.5) (CO5) 6.10 Perform file operations such as creating, opening, reading, writing, updating and closing files using C standard library functions. (P.I. – 2.3.3) (CO5, CO6)	
Total			30

Suggested List of Practical:

Sr No.	Suggested Topic(s)
1.	Perform arithmetic operations using math library functions. Learning Outcome: LO1.2 Use operators and math library functions in expressions (P.I. – 1.3.3) (CO1)
2.	Use printf() and scanf() with format specifiers and field widths. Learning Outcome: LO2.1 Write program using correct format specifiers in input/output functions to perform basic computations (P.I. – 1.3.2) (CO1) 2.3
3.	Display various patterns using nested loops. Learning Outcome: LO3.4 Develop a logic to display various patterns by using nested loops (P.I. – 2.2.3) (CO2, CO6)
4.	Implement control structures to solve problems like Armstrong number, Fibonacci series, etc. Learning Outcome: LO3.3 Develop a logic and implement it for the problems which demands usage of Iterative Constructs (P.I. – 2.1.2) (CO2)
5.	Write recursive functions to compute factorial, GCD, etc. Learning Outcome:

	LO4.2 Analyse the problem statement to identify the scope of using recursion and accordingly implement it (P.I. – 2.2.3) (CO3, CO6)
6.	Perform sorting, searching on 1D array and matrix multiplication using 2D array. Learning Outcome: LO5.2 Perform operations like Matrix Multiplication, Addition, Transform, Magic Square generation etc. 4.3 (P.I. – 1.3.1) (CO4)
7.	Develop string functions: reverse, length, concat, and substring search. Learning Outcome: LO5.3 Propose user defined functions for: string length, string copy, string reverse, string concatenation, searching for substring 5.2 (P.I. – 2.2.3) (CO4)
8.	Create and manage student records using structures and arrays of structures. Learning Outcome: LO5.4 Declare a structure for representing the data about the entity, perform operations like, data population, updating, searching and displaying the records (P.I. – 2.2.3) (CO4, CO6)
9.	Use pointers to access and manipulate elements of 1D and 2D arrays. Learning Outcome: LO6.2 Write a program to process elements of 1 D array and 2 D array with the help of pointers (P.I. – 1.3.4) (CO4)
10.	Copy contents from one file to another using file handling. Learning Outcome: LO6.4 Develop an application to insert records into text file, delete and update them as per the need (P.I. – 2.3.3) (CO5)

Performance Indicators:

- P.I.- 1.3.1: **Remembering:** List fundamental engineering principles and their applications.
- P.I.- 1.3.2: **Understanding:** Explain the relevance of basic engineering principles to real-world problems.
- P.I.- 1.3.3: **Applying:** Perform calculations and simulations to solve simple engineering tasks.
- P.I.- 1.3.4: **Analysing:** Deconstruct engineering scenarios to identify fundamental principles at work.
- P.I.- 2.1.2: **Understanding:** Explain the key features and scope of a complex engineering problem.
- P.I.- 2.1.3: **Applying:** Use standard problem-identification techniques to define an engineering challenge.
- P.I.- 2.1.4: **Analysing:** Decompose a complex engineering problem into its constituent parts to identify critical aspects.
- P.I.- 2.2.3: **Applying:** Develop a basic solution plan using a systematic approach to solve an identified problem.
- P.I.- 2.3.3: **Applying:** Construct a basic model to represent a complex engineering system or process..
- P.I.- 2.4.5: **Evaluating:** Critically assess the solution's accuracy and efficiency and propose of improvements if necessary.
- P.I.- 9.2.1: **Understanding:** Describe the importance of effective communication and conflict resolution within a team..

LAB, ESE
	6.2 Write a program to process elements of 1 D array and 2 D array with the help of pointers	LAB, ISA
	6.3 Solve programming challenges from Leet Code / Hacker Rank platform which involves dynamic memory allocation	ISA, LAB
	6.4 Develop an application to insert records into text file, delete and update them as per the need.	LAB

Course Name: Effective Communication

Course Code: AEC01T & AEC01P

Vertical/ Sub-Vertical: HSSM_AEC

K-S-A Mapping: Knowledge, Skill & Attitude

Pre-requisite required: Nil

Pre-requisite for: Nil

Recommended Semester: I

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
AEC01T	2	-	2	-
AEC01P	-	2	-	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (AEC01T)	15 (~20%)	20 (~30%)	40 (~50%)	75 (100%)
Practical (AEC01P)	25 (50%)	-	25 (50%)	50 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

This course introduces learners to the basics of Effective Communication which will equip them with the requisite soft skillset required for higher studies and placements. With focus on LSRW skills, the course considers the important foundational aspects of communication skills and English proficiency required for the workplace. It acquaints the students with modern communication tools and the basics of public speaking before an audience.

Course Objectives:

- To enable learners to gain understanding of the cyclic process, methods, channels, and barriers of communication.
- To facilitate learners in developing the skills of active listening, impactful public speaking, reading strategies, and effective writing.
- To create awareness of strengthening English proficiency for competitive exam preparation and the art of comprehension and summarization.
- To introduce strategies for creating effective presentations using modern ICT enabled tools.
- To enhance learners' summarization and comprehension skills using graphic organizers to identify key ideas, structure information, and improve retention and clarity of understanding across diverse texts.

- To equip learners with skills in digital content creation using ICT tools, infographics, and social and popular media to communicate ideas effectively and engage diverse audiences.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Use verbal/non-verbal cues at social and workplace situations by learning the basics of communication skills.	Affective Responding
CO2	Employ listening strategies to become effective listeners and powerful speakers for speaking at social, academic and business situations.	Psychomotor Perception
CO3	Improved verbal aptitude to be equipped for competitive examinations and placements.	Cognitive Application
CO4	Make effective presentations and present before an audience with confidence.	Affective Organizing
CO5	Use reading strategies for faster comprehension, summarization and evaluation of texts.	Cognitive Comprehension
CO6	Develop awareness of contemporary digital tools of communication.	Cognitive Application

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Fundamentals of Communication	Learning Objective: To enhance students' proficiency in verbal and non-verbal communication relevant to academic and professional settings. (CO1) Contents: Concept, Elements and Cycle of Communication, Methods of Communication (Verbal and Nonverbal), Objectives and Channels of Communication (Formal and Informal), Barriers to Communication: Physical, Mechanical, Psychological, Semantic, Socio-cultural, Cross-cultural Learning Outcomes: 1.1 Learners will be able to identify and explain the key concepts, elements, and stages of the communication cycle, and apply them to analyse and improve real-life communication scenarios. (CO1) (P.I. 10.1.2, 10.2.1, 12.1.1, 12.1.2) 1.2 Learners will be able to differentiate between verbal and non-verbal methods and channels of communication, align them with specific communication objectives, and choose the most effective approach for diverse contexts. (CO1) (P.I.10.1.1, 10.2.2, 12.1.1, 12.1.2)	10

		1.3 Learners will be able to identify and analyse physical, mechanical, psychological, semantic, socio-cultural, and cross-cultural barriers to communication, and propose strategies to overcome them effectively. (CO1) (P.I.10.1.1, 12.1.2)	
2	Listening & speaking	Learning Objective: To cultivate active listening, and appropriate response strategies in both academic and professional interactions. (CO2) Contents: Techniques to improve Listening, Listening-exercises, Speech writing and delivery, Different types of Speeches & Tips on Public Speaking Learning Outcomes: 2.1 Learners will be able to apply effective listening techniques to enhance understanding, retention, and response in various communication contexts. (CO2) (P.I. 10.2.1, 10.2.2, 12.1.1, 12.1.2, 12.2.2) 2.2 Learners will be able to craft clear, organized speeches and deliver them confidently using effective verbal and non-verbal communication techniques. (CO2) (P.I. 10.3.2, 10.2.1, 8.1.1, 8.4.2, 12.1.1, 12.1.2) 2.3 Learners will be able to distinguish different types of speeches and apply key public speaking tips to deliver engaging and effective presentations. (CO2) (P.I. 10.1.3, 10.2.2, 10.3.2, 9.2.1, 9.2.2, 9.2.3, 12.1.1, 12.1.2, 12.2.2)	6
3	English Usage	Learning Objective: To equip students with strategies to perform well in verbal aptitude sections of standardized tests and engineering placement assessments. (CO3) Contents: Vocabulary Building (Etymology, Synonyms, Antonyms, One Word Substitutes) useful for TOEFL, GRE, Grammar Proficiency Tests (Articles, Prepositions, Tenses, Punctuation), Identifying Common Errors in Writing, Grammar Checkers and Sentence Correction Tools Learning Outcomes: 3.1 Learners will be able to enhance their vocabulary through etymology, synonyms, antonyms, and one-word substitutes, while strengthening grammar proficiency in articles, prepositions, tenses, and punctuation to excel in TOEFL, GRE, and other proficiency tests. (CO3) (P.I.10.1.1, 10.1.2, 10.1.3, 12.1.1, 12.1.2, 12.3.1, 12.3.2) 3.2 Learners will be able to identify common writing errors and effectively use grammar checkers and sentence correction tools to improve the accuracy and clarity of their written work. (CO3) (P.I. 10.1.2, 12.1.1, 12.1.2, 12.2.2) 3.3 Learners will be able to apply grammar knowledge and utilize digital correction tools to produce clear,	4

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		<i>professional written communication essential for career success. (CO3) (P.I.10.1.2, 12.1.1, 12.1.2, 12.2.2)</i>	
4	Presentation Skills	Learning Objective: <i>To build confidence and effectiveness in delivering oral presentations, including the use of visual aids and proper body language. (CO1, CO4)</i> Contents: Introduction to Presentation Skills, Creating Presentations-Content, Delivering Presentations before an audience, Using Presentation Software-Modern Presentation Tools Learning Outcomes: 4.1 Learners will be able to design well-structured presentations by effectively organizing content and applying fundamental presentation skills. (CO4) (P.I. 10.1.3, 10.3.1, 10.3.2, 5.1.1, 5.2.2, 9.1.1, 9.1.2, 9.2.1, 9.2.2, 9.2.3, 9.2.4, 9.3.1) 4.2 Learners will be able to confidently deliver presentations to an audience using effective verbal and non-verbal communication techniques to engage and inform listeners. (CO4) (P.I.9.1.1, 9.1.2, 9.2.1, 9.2.2, 9.2.3, 9.2.4, 9.3.1, 10.1.3, 10.2.2, 10.3.2) 4.3 Learners will be able to proficiently use modern presentation software and tools to create visually engaging and impactful presentations. (CO4) (P.I.10.1.3, 10.2.2, 10.3.1, 10.3.2, 5.1.1, 5.2.2, 9.1.1, 9.1.2, 9.2.1, 9.2.2, 9.2.3, 9.2.4, 9.3.1)	4
5	Comprehension And Summarization	Learning Objective: <i>To improve the ability to quickly read, interpret, and respond to complex texts such as manuals, technical articles, and instructions. (CO5)</i> Contents: Comprehension & Reading Strategies, Graphic Organizers (Mind Maps, Flow Charts, Tree Diagrams etc.), Summarization of technical passages within specified word limit Learning Outcomes: 5.1 Learners will be able to apply effective comprehension and reading strategies to analyse, interpret, and critically evaluate various types of texts. (CO5) (P.I.10.1.1, 12.1.1, 12.1.2) 5.2 Learners will be able to use graphic organizers like mind maps, flow charts, and tree diagrams to visually organize information and enhance understanding and retention. (CO5) (P.I.10.3.1, 12.1.1) 5.3 Learners will be able to accurately summarize technical passages within a specified word limit,	2

Electronics and Computer Science

		<i>capturing key points clearly and concisely. (CO5) (P.I.10.1.1, 10.1.2, 12.1.1, 12.3.1)</i>	
6	Communication Strategies for Virtual Age	Learning Objective: To raise awareness of secure digital communication practices, develop online content, and master the use of ICT tools in accordance with professional and ethical standards. (CO6) Contents: Digital Content Creation, Infographics, ICT Tools, Social and Popular Media Self-learning topics: List of self-learning topics on communication strategies for the virtual age are: Virtual communication etiquette by watching relevant videos, writing clear digital messages by using various social media platforms Learning Outcomes: 6.1 Learners will be able to create engaging digital content and infographics using various ICT tools to effectively communicate information. (CO6) (P.I.10.3.2, 10.3.1, 12.1.1, 12.1.2, 12.2.2, 5.1.1, 5.2.1, 5.2.2, 5.3.1, 5.3.2) 6.2 Learners will be able to critically analyse and effectively use social and popular media platforms to engage audiences and communicate messages responsibly. (CO6) (P.I. 10.1.2, 10.1.3, 5.2.2, 5.3.2, 8.1.1, 8.4.2, 12.1.1, 12.1.2, 12.2.2)	4
Total			30

Suggested List of Practical:

Sr No.	Suggested Topic(s)
1.	Practice and Delivery of Public Speech. Document a speech, free of plagiarism. Learning Outcomes: A learner will be able to: 2.2 Learners will be able to craft clear, organized speeches and deliver them confidently using effective verbal and non-verbal communication techniques. (CO2) (P.I. 10.3.2, 10.2.1, 10.2.1, 8.1.1, 8.4.2, 12.1.1, 12.1.2) 2.3 Learners will be able to distinguish different types of speeches and apply key public speaking tips to deliver engaging and effective presentations. (CO2) (P.I. 10.1.3, 10.2.2, 10.3.2, 9.2.1, 9.2.2, 9.2.3, 12.1.1, 12.1.2, 12.2.2) 3.2 Learners will be able to identify common writing errors and effectively use grammar checkers and sentence correction tools to improve the accuracy and clarity of their written work. (CO3) (P.I. 10.1.2, 12.1.1, 12.1.2, 12.2.2)

	3.3 Learners will be able to apply grammar knowledge and utilize digital correction tools to produce clear, professional written communication essential for career success. (CO3) (P.I.10.1.2, 12.1.1, 12.1.2, 12.2.2)
2.	MOOC TCSion Course Learning Outcomes: A learner will be able to: 1.1 Learners will be able to identify and explain the key concepts, elements, and stages of the communication cycle, and apply them to analyse and improve real-life communication scenarios. (CO1) (P.I. 10.1.2, 10.2.1, 12.1.1, 12.1.2) 1.2 Learners will be able to differentiate between verbal and non-verbal methods and channels of communication, align them with specific communication objectives, and choose the most effective approach for diverse contexts. (CO1) (P.I.10.1.1, 10.2.2, 12.1.1, 12.1.2) 1.3 Learners will be able to identify and analyse physical, mechanical, psychological, semantic, socio-cultural, and cross-cultural barriers to communication, and propose strategies to overcome them effectively. (CO1) (P.I.10.1.1, 12.1.2) 2.1 Learners will be able to apply effective listening techniques to enhance understanding, retention, and response in various communication contexts. (CO2) (P.I. 10.2.1, 10.2.2, 12.1.1, 12.1.2, 12.2.2) 2.2 Learners will be able to craft clear, organized speeches and deliver them confidently using effective verbal and non-verbal communication techniques. (CO2) (P.I. 10.3.2, 10.2.1, 10.2.1, 8.1.1, 8.4.2, 12.1.1, 12.1.2) 3.3 Learners will be able to apply grammar knowledge and utilize digital correction tools to produce clear, professional written communication essential for career success. (CO3) (P.I.10.1.2, 12.1.1, 12.1.2, 12.2.2) 4.2 Learners will be able to confidently deliver presentations to an audience using effective verbal and non-verbal communication techniques to engage and inform listeners. (CO4) (P.I.9.1.1, 9.1.2, 9.2.1, 9.2.2, 9.2.3, 9.2.4, 9.3.1, 10.1.3, 10.2.2, 10.3.2) 5.4 Learners will be able to apply effective comprehension and reading strategies to analyse, interpret, and critically evaluate various types of texts. (CO5) (P.I.10.1.1, 12.1.1, 12.1.2)
3.	Poster Making and Presentation Learning Outcomes: A learner will be able to: 2.3 Learners will be able to distinguish different types of speeches and apply key public speaking tips to deliver engaging and effective presentations. (CO2) (P.I. 10.1.3, 10.2.2, 10.3.2, 9.2.1, 9.2.2, 9.2.3, 12.1.1,12.1.2, 12.2.2) 4.1 Learners will be able to design well-structured presentations by effectively organizing content and applying fundamental presentation skills. (CO4) (P.I. 10.1.3, 10.3.1, 10.3.2, 5.1.1, 5.2.2, 9.1.1, 9.1.2, 9.2.1, 9.2.2, 9.2.3, 9.2.4, 9.3.1)

	4.2 Learners will be able to confidently deliver presentations to an audience using effective verbal and non-verbal communication techniques to engage and inform listeners. (CO4) (P.I.9.1.1, 9.1.2, 9.2.1, 9.2.2, 9.2.3, 9.2.4, 9.3.1, 10.1.3, 10.2.2, 10.3.2) 4.3 Learners will be able to proficiently use modern presentation software and tools to create visually engaging and impactful presentations. (CO4) (P.I.10.1.3, 10.2.2, 10.3.1, 10.3.2, 5.1.1, 5.2.2, 9.1.1, 9.1.2, 9.2.1, 9.2.2, 9.2.3, 9.2.4, 9.3.1)
4.	Listening Exercises Learning Outcomes: A learner will be able to: 2.1 Learners will be able to apply effective listening techniques to enhance understanding, retention, and response in various communication contexts. (CO2) (P.I. 10.2.1, 10.2.2, 12.1.1, 12.1.2, 12.2.2) 2.2 Learners will be able to craft clear, organized speeches and deliver them confidently using effective verbal and non-verbal communication techniques. (CO2) (P.I. 10.3.2, 10.2.1, 10.2.1, 8.1.1, 8.4.2, 12.1.1, 12.1.2) 2.3 Learners will be able to distinguish different types of speeches and apply key public speaking tips to deliver engaging and effective presentations. (CO2) (P.I. 10.1.3, 10.2.2, 10.3.2, 9.2.1, 9.2.2, 9.2.3, 12.1.1, 12.1.2, 12.2.2)
5.	Comprehension (Reading research paper) and Summarization Learning Outcomes: A learner will be able to: 5.1 Learners will be able to apply effective comprehension and reading strategies to analyse, interpret, and critically evaluate various types of texts. (CO5) (P.I.10.1.1, 12.1.1, 12.1.2) 5.2 Learners will be able to use graphic organizers like mind maps, flow charts, and tree diagrams to visually organize information and enhance understanding and retention. (CO5) (P.I.10.3.1, 12.1.1) 5.3 Learners will be able to accurately summarize technical passages within a specified word limit, capturing key points clearly and concisely. (CO5) (P.I.10.1.1, 10.1.2, 12.1.1, 12.3.1)
6.	Reel/ Video/ Tabloid Making or Blog Writing or Travelogues Learning Outcomes: A learner will be able to: 6.1 Learners will be able to create engaging digital content and infographics using various ICT tools to effectively communicate information. (CO6) (P.I.10.3.2, 10.3.1, 12.1.1, 12.1.2, 12.2.2, 5.1.1, 5.2.1, 5.2.2, 5.3.1, 5.3.2) 6.2 Learners will be able to critically analyse and effectively use social and popular media platforms to engage audiences and communicate messages responsibly. (CO6) (P.I. 10.1.2, 10.1.3, 5.2.2, 5.3.2, 8.1.1, 8.4.2, 12.1.1, 12.1.2, 12.2.2)
7.	Extempore Speech Delivery Learning Outcomes: A learner will be able to: 2.2 Learners will be able to craft clear, organized speeches and deliver them confidently using effective verbal and non-verbal communication techniques. (CO2) (P.I. 10.3.2, 10.2.1, 10.2.1, 8.1.1, 8.4.2, 12.1.1, 12.1.2)

	2.3 Learners will be able to distinguish different types of speeches and apply key public speaking tips to deliver engaging and effective presentations. (CO2) (P.I. 10.1.3, 10.2.2, 10.3.2, 9.2.1, 9.2.2, 9.2.3, 12.1.1, 12.1.2, 12.2.2)
8.	Group Presentation on "Innovative Technologies related to the domains/ ICT tools" along with 2-3 Page Report Learning Outcomes: 6.1 Learners will be able to create engaging digital content and infographics using various ICT tools to effectively communicate information. (CO6) (P.I. 10.3.2, 10.3.1, 12.1.1, 12.1.2, 12.2.2, 5.1.1, 5.2.1, 5.2.2, 5.3.1, 5.3.2) 6.2 Learners will be able to critically analyse and effectively use social and popular media platforms to engage audiences and communicate messages responsibly. (CO6) (P.I. 10.1.2, 10.1.3, 5.2.2, 5.3.2, 8.1.1, 8.4.2, 12.1.1, 12.1.2, 12.2.2)

Performance Indicators –

P.I. 5.1.1: Understanding: Identify modern engineering tools, techniques and resources for engineering activities

P.I. 5.2.2: Applying: Create/adapt/modify/extend tools and techniques to solve engineering problems

P.I. 5.2.1: Understanding: Identify the strengths and limitations of tools for (i) acquiring information, (ii) modeling and simulating, (iii) monitoring system performance, and (iv) creating engineering designs.

P.I. 5.3.1: Analysing: Discuss limitations and validate tools, techniques and resources

P.I. 5.3.2: Analysing: Verify the credibility of results from tool use with reference to the accuracy and limitations, and the assumptions inherent in their use

P.I. 8.1.1: Understanding: Identify situations of unethical professional conduct and propose ethical alternatives

P.I. 8.4.2: Applying: Examine and apply moral & ethical principles to known case studies

P.I. 9.1.1: Remembering: Recognize a variety of working and learning preferences; appreciate the value of diversity on a team

P.I. 9.1.2: Applying: Implement the norms of practice (e.g. rules, roles, charters, agendas, etc.) of effective teamwork, to accomplish a goal

P.I. 9.2.4: Understanding: Maintain composure in difficult situations

P.I. 9.3.1: Applying: Present results as a team, with smooth integration of contributions from all individual efforts

P.I. 9.2.1: Applying: Demonstrate effective communication, problem-solving, conflict resolution and leadership skills

P.I. 9.2.2: Applying: Treat other team members respectfully

P.I. 9.2.3: Applying: Listen to other members

P.I. 10.1.1: Understanding: Read, understand and interpret technical and non-technical information

P.I. 10.1.2: Applying: Produce clear, well-constructed, and well-supported written engineering documents

P.I. 10.1.3: Applying: Create flow in a document or presentation - a logical progression of ideas so that the main point is clear

P.I. 10.2.1: Understanding: Listen to and comprehend information, instructions, and viewpoints of others

P.I. 10.2.2: Applying: Deliver effective oral presentations to technical and non-technical audiences

P.I. 10.3.1: Applying: Create engineering-standard figures, reports and drawings to complement writing and presentations

P.I. 10.3.2: Applying: Use a variety of media effectively to convey a message in a document or a presentation

P.I. 12.1.1: Understanding: Describe the rationale for the requirement for continuing professional development

P.I. 12.1.2: Understanding: Identify deficiencies or gaps in knowledge and demonstrate an ability to source information to close this gap

P.I. 12.2.2: Understanding: Recognize the need and be able to clearly explain why it is vitally important to keep current regarding new developments in your field

P.I. 12.3.1: Understanding: Source and comprehend technical literature and other credible sources of information

P.I. 12.3.2: Analysing: Analyze sourced technical and popular information for feasibility, viability, sustainability, etc.

Mapping of Course Outcomes with Learning Outcomes:

	Mapped to Learning Outcomes

Detailed Syllabus of First Year Semester - II

Course Name: Engineering Mathematics-II

Course Code: BSC14

Vertical/ Sub-Vertical: BSES_BSC

K-S-A Mapping: Knowledge & Skill

Pre-requisite required: BSC01 (Engineering Mathematics-I)

Pre-requisite for: BSC06 (Engineering Mathematics-III), and higher-level mathematical courses.

Recommended Semester: II

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
BSC03	3	-	3	-

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory	20 (~20%)	30 (~30%)	50 (~50%)	100 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

This course introduces fundamental concepts of matrices, differential equations, and multiple integrals, focusing on analytical and computational techniques for solving engineering problems. It emphasizes the application of mathematical methods to real-world situations and the development of problem-solving skills.

Course Objectives:

- Understand and compute eigenvalues and eigenvectors and apply their properties in matrix analysis.
- Apply the Cayley-Hamilton theorem for matrix computations, including diagonalization and evaluation of matrix functions.
- Solve first-order and higher-order differential equations using appropriate analytical methods.
- Evaluate double and triple integrals using suitable coordinate systems and apply them to compute area and volume in practical problems.

Course Outcomes:

Learner will be able to:

Course Outcomes	Course Outcome Statement	Bloom's Level
CO1	Recall fundamental concepts of matrices, differential equations, and multiple integrals.	Remember
CO2	Explain mathematical principles such as eigenvalue properties, matrix transformations, solution methods of differential equations, and coordinate transformations in integration.	Understand
CO3	Apply appropriate techniques to solve problems involving matrices, differential equations, and evaluation of multiple integrals.	Apply
CO4	Analyze mathematical problems to select suitable methods and interpret results in the context of engineering applications.	Analyze

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours	CO's Mapped
1	Advanced Matrices	Learning Objective: To introduce the concept of eigenvalues and eigenvectors and develop the ability to compute and interpret them in different contexts. (CO1 to CO4) Contents: Characteristic equation, Eigen values and Eigen vectors, Properties of Eigen values and Eigen vectors. Self-Learning Topics: Learning Outcomes: A learner will be able to: 1.13 Recall the definition of characteristic equation, eigenvalues, and eigenvectors (CO1) 1.14 Explain the properties of eigenvalues and eigen vectors in matrix computations (CO2) 1.15 Compute eigen values and eigen vectors of matrix (CO3) 1.16 Analyze matrices by interpreting the properties of eigenvalues and eigenvectors in different contexts. (CO4)	7	
2	Matrix Transformations & Applications	Learning Objective: To enable learners to apply the Cayley-Hamilton theorem in matrix computations, including functions of matrices, diagonalization, and similarity transformations. (CO1 to CO4)	7	

		Contents: Cayley-Hamilton theorem (without proof), examples based on verification of Cayley-Hamilton theorem. Similarity of matrices, Diagonalisation of matrices. Functions of square matrix. Singular Value Decomposition. Self-Learning Topics: Derogatory and non-derogatory matrices. Learning Outcomes: A learner will be able to: 2.5 Recall the Cayley Hamilton theorem and related matrix concepts. (CO1) 2.6 Explain the concepts of similarity of matrices, diagonalization, matrix functions, and the fundamentals of Singular Value Decomposition. (CO2) 2.7 Apply the Cayley-Hamilton theorem to verify matrix equations, compute functions of matrices, perform diagonalization, and determine Singular Value Decomposition of matrices. (CO3) 2.8 Analyze matrices by interpreting similarity, diagonalization, matrix functions, and Singular Value Decomposition in various computational and application-based contexts. (CO4)		
3	Differential Equations of first order and first degree	Learning Objective: To understand methods for solving first-order differential equations, including exact, linear, and Bernoulli forms, and to apply appropriate techniques such as integrating factors to obtain solutions. (CO1 to CO4) Contents: Exact Differential Equations, Equations reducible to exact form by integrating factors, Linear Differential Equations, Equations reducible to Linear Differential Equations, Bernoulli's Equation. Self-Learning Topics: Learning Outcomes: A learner will be able to: 3.1 Recall definitions of exact differential equations, linear differential equations, and Bernoulli's equation. (CO1)	8	

		3.2 Explain the concept of integrating factors and conditions for exactness and linearity. (CO2) 3.3 Apply suitable methods to solve exact equations, equations reducible to exact form, linear and Bernoulli differential equations. (CO3) 3.4 Analyze differential equations by identifying appropriate solution methods and transforming them into solvable forms. (CO4)		
4	Higher Order Differential Equations	Learning Objective: To develop the ability to solve higher-order linear differential equations with constant coefficients using methods such as complementary function, particular integral, and variation of parameters (CO1 to CO4) Contents: Linear Differential Equation with constant coefficient- Complementary Function and Particular Integral of Differential Equations of the type $f(D)y=X$, where X is e^{ax}, $\sin(ax+b)$, $\cos(ax+b)$, x^m (m is positive integer), $e^{ax}V$, xV or X, Method of Variation of Parameters. Self-Learning Topics: Learning Outcomes: A learner will be able to: 4.1 Recall the concepts of auxiliary equation, complementary function, and particular integral. (CO1) 4.2 Understand the formation of solutions for differential equations of the type $f(D)y = X$ for standard functions. (CO2) 4.3 Apply appropriate methods to compute complementary function and particular integral for given differential equations. (CO3) 4.4 Analyze and select suitable techniques, including variation of parameters, for solving complex differential equations. (CO4)	8	
5	Multiple Integration-I	Learning Objective: To develop the ability to evaluate double integrals in Cartesian and polar coordinates and apply them to compute integrals over specified regions. (CO1 to CO4) Contents: Evaluation of double integrals, evaluation of double integrals by changing the order of integration, double integrals in cartesian and polar forms, evaluation of area using double integration over specified regions.	8	

		Self-Learning Topics: Learning Outcomes: A learner will be able to: 5.1 Recall the definition and basic properties of double integrals. (CO1) 6.5 Understand the transformation between Cartesian and polar coordinates for double integration. (CO2) 6.6 Apply methods to evaluate double integrals over given regions in Cartesian and polar forms. (CO3) 6.7 Analyze regions of integration and select appropriate coordinate systems for efficient evaluation. (CO4)		
6	Multiple Integration-II	Learning Objective: To develop the ability to evaluate multiple integrals using appropriate coordinate transformations and apply them to compute areas and volumes of real-world regions. (CO1 to CO4) Contents: Evaluation of triple integration, evaluation of triple integral by changing to polar coordinates, evaluation of triple integration by changing to cylindrical and spherical coordinates and applying to real-world regions. Self-Learning Topics: Learning Outcomes: A learner will be able to: 6.1 Recall formulas and coordinate systems for triple integrals. (CO1) 6.2 Understand the need for coordinate transformations such as polar, cylindrical, and spherical systems. (CO2) 6.3 Apply integration techniques to evaluate triple integrals in different coordinate systems. (CO3) 6.4 Analyze regions and select suitable coordinate systems to efficiently compute volume of practical domains. (CO4)	7

Practical (CE01P)	25 (50%)	-	25 (50%)	50 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

This course imparts students sound knowledge on the fundamentals of chemistry which can be applied in various courses and projects taken in Electronics and Computer Science, Electronics and Telecommunication and Biomedical Engineering.

Course Objectives:

1. The contents of this course will aid in quantification and understand the applications of several concepts in Chemistry.
2. To appreciate the need for and importance of engineering chemistry for industrial and domestic use.
3. To gain the knowledge on existing and future upcoming materials used in device fabrication.
4. To impart knowledge of green chemical technology and its applications.

5. To enhance the thinking capabilities in line with the modern trends in engineering and technology.

Course Outcome:

Student will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Interpret properties, synthesis, and uses of important materials in various engineering applications.	Understand
CO2	Apply the fundamentals of electrochemistry in prevention & control measures related to corrosion of structures and devices.	Apply
CO3	Rationalise different types of batteries and their real-life engineering applications.	Analyse
CO4	Analyse different spectroscopic techniques and study fundamentals of electromagnetic spectrum.	Analyse
CO5	Associate Green Chemistry principles in product development knowledge.	Apply

Detailed Syllabus:

Module no	Module name	Content	No of Hours
1	Polymer Chemistry	Learning Objective: To understand the types, properties, and synthesis methods of polymers used in various engineering applications. (CO1). Contents: Introduction to Polymer, Properties of Polymers- Molecular weight, numerical problems on molecular weight, Glass transition temperature Methods of polymerization, Synthesis, Properties and Uses of commercially important polymers, Study of Speciality polymers like Conducting polymers, Liquid Crystal Polymer etc., Applications of Polymers Learning Outcomes: A learner will be able to: 1.1 Describe types and properties of polymers. (PI 1.1.1) (CO1) 1.2 Illustrate synthesis processes and correlate structure with properties. (PI 1.2.1) (CO1)	6
2	Electrochemistry and Corrosion	Learning Objective: To explore electrochemical principles and their application in understanding and preventing corrosion. (CO2). Contents:	6

		Electrochemistry- Basics, Types of electrochemical cells, Electrochemical series and Galvanic series, Nernst equation, Numerical problems, Construction & Application of various electrodes Corrosion- Chemical and Electrochemical corrosion, Mechanism, Types- Differential aeration, Galvanic, Stress, Intergranular, Microbial, Soil corrosion etc., Prevention and control Measures, Case studies like- Corrosion in human body implants & Corrosion in electronic gadgets Learning Outcomes: A learner will be able to: 2.1 Apply Nernst equation and electrochemical cell concepts in real-life scenarios. (PI 2.1.2) (CO2) 2.2 Analyse corrosion mechanisms and suggest appropriate prevention techniques. (PI 2.2.3) (CO2)	
3	Energy Storage systems	Learning Objective: To investigate the working, classification, and applications of modern batteries and fuel cells in sustainable engineering. (CO3). Contents: Fundamentals of Energy storage, primary cells and secondary cells, Types of Batteries, Construction and application of Li-Ion battery Fuel cells- principle, components of fuel cell, types of fuel cell, applications, advantages and disadvantages, hydrogen production and hydrogen storage system Numerical problems Learning Outcomes: A learner will be able to: 3.1 Classify batteries based on chemistry and structure. (PI 1.3.1) (CO3) 3.2 Evaluate suitability of energy storage devices for different applications. (PI 2.2.2) (CO3)	4
4	Chemistry of Semiconductors	Learning Objective: To understand the properties and chemistry of semiconductor elements and compounds and their relevance in electronic applications. (CO1). Contents: Silicon & Germanium - Physical and chemical properties, Isotopes, Chemistry of compounds like GaAs, GaP, InP. InGaAs, ZrO, HfO and applications in industry Learning Outcomes: A learner will be able to: 4.1 Compare physical and chemical properties of Silicon and Germanium. (PI 1.1.1) (CO1) 4.2 Describe isotopes and analyze semiconductor compounds such as GaAs, GaP, InP, InGaAs, ZrO, and HfO with industrial applications. (PI 1.2.1, PI 2.2.2) (CO1)	3

5	Engineering Materials	Learning Objective: To explore the structure, properties, and applications of advanced materials including nanomaterials, composites, shape memory alloys, and smart materials. (CO1) Contents: Nanomaterials: Introduction, Graphene, Fullerenes, Carbon nanotubes, Electronic and Mechanical properties, Synthesis of CNT, Role of nano materials in electronics, Photonics, MEMS, Energy Nano-bio application Composite Materials: Types, properties, and industrial applications Shape Memory alloys: Principle, properties, super elasticity-One way and two-way shape memory effect, Austenite and martensite transformations, applications Smart Materials: Self-Assembled Nanostructures - Energy Harvesting Materials, Intelligent Materials – Magneto strictive Materials Learning Outcomes: A learner will be able to: a. Explain structure, synthesis, and applications of nanomaterials such as graphene, fullerenes, and carbon nanotubes. (PI 1.1.1, PI 1.2.1) (CO1) b. Describe the types, properties, and uses of composite materials. (PI 2.2.2) (CO1) c. Illustrate the working and characteristics of shape memory alloys and their transformations. (PI 1.3.1, PI 2.1.2) (CO1) d. Evaluate functionalities and applications of smart materials like self-assembled nanostructures and magnetostrictive materials. (PI 7.2.1, PI 1.4.2) (CO1)	5
6	Spectroscopic techniques	Learning Objective: To understand the basic principles and applications of spectroscopic techniques in structural elucidation and analysis. (CO4) Contents: Fundamentals of Spectroscopy, Electromagnetic spectrum, Different Forms of Spectroscopy, Beer-Lambert's law- Numerical problems, Techniques, Instrumentation and applications in Medicines and electronics Learning Outcomes: A learner will be able to: 6.1 Explain principles of UV-Vis, IR, and NMR spectroscopy. (PI 1.1.1) (CO4) 6.2 Analyse spectra and infer structural information. (PI 1.4.2) (CO4)	4
7	Green Chemistry	Learning Objective: To apply the principles of Green Chemistry in developing environmentally benign processes and materials. (CO5).	2

		Contents: 12 Principles of Green Chemistry & application in green computing & Green Electronics, Numerical problems Learning Outcomes: A learner will be able to: 7.1 Identify and explain 12 principles of Green Chemistry. (PI 7.1.1) (CO5) 7.2 Propose eco-friendly alternatives to conventional processes. (PI 7.2.1) (CO5)	
--	--	---	--

Suggested List of Practicals:

Sr No.	Suggested Topic(s)
1.	To determine free acid pH of different solutions using pH meter Learning Outcomes: A learner will be able to: Determine and interpret pH values of various solutions using instrumentation. (P.I. – 1.3.1, 1.4.2)
2.	To determine the Wavelength of Maximum Absorbance using colorimeter. Learning Outcomes: A learner will be able to: Identify λ and analyze the electronic transitions in solutions. (P.I. – 1.1.1, 1.4.2)
3.	To determine metal ion concentration using colorimeter. Learning Outcomes: A learner will be able to: Apply Beer-Lambert's law to quantify unknown metal ions. (P.I. – 2.2.2, 1.4.2)
4.	To determine Molecular weight of polymers by Oswald Viscometer. Learning Outcomes: A learner will be able to: Calculate intrinsic viscosity and determine polymer molecular weight. (P.I. 1.2.1, 1.3.1)
5.	To synthesize UF, PF, Nylon 66. Learning Outcomes: A learner will be able to: Perform polymer synthesis and understand polymerization mechanisms. (P.I. – 1.1.1, 1.2.1)
6.	To synthesize biodegradable polymer. Learning Outcomes: A learner will be able to: Understand green polymer alternatives and eco-friendly chemistry. (P.I. - 7.1.1, 7.2.1)
7.	To determine Viscosity of oil by Redwood Viscometer Learning Outcomes: A learner will be able to: Measure and interpret the viscosity of lubricants for industrial applications. (P.I. – 1.3.1, 1.2.1)
8.	To separate pigments using paper chromatography. Learning Outcomes: A learner will be able to: Apply separation techniques for analyzing mixtures and identifying compounds. (P.I. – 1.4.2, 2.1.2)
9.	To determine total, temporary, and permanent hardness of water sample by EDTA method.

	Learning Outcomes: A learner will be able to: Analyze water samples using complexometric titration and distinguish types of hardness. (P.I. – 2.2.3, 2.1.2)
10.	To construct the battery and measure potential difference across two terminals Learning Outcomes: A learner will be able to: Construct electrochemical cells and evaluate voltage output. (P.I. – 2.1.2, 2.2.2)
11.	To identify the materials and learn their properties Learning Outcomes: A learner will be able to: Observe and analyze structure-property relationships of engineering materials. (P.I. – 1.1.1, 1.2.1)
12.	To set up a galvanic cell Learning Outcomes: A learner will be able to: Explain the principles of redox reactions and voltage generation in galvanic cells. (P.I. – 2.1.2, 1.3.1)
13.	To set up an electrolytic cell and carry out electroplating Learning Outcomes: A learner will be able to: Understand electrolysis and apply it for electroplating techniques. (P.I. – 1.4.2, 2.2.2)
14.	To carry out etching of the Printed Circuit Board (PCB) Learning Outcomes: A learner will be able to: Apply chemical etching processes in electronics fabrication. (P.I. – 1.3.1, 2.2.3)
15.	To synthesize a nanomaterial and study its characterization Learning Outcomes: A learner will be able to: Synthesize nanomaterials and interpret results using characterization tools. (P.I. – 1.2.1, 1.4.2)
16.	To detect the adulteration in given milk sample Learning Outcomes: A learner will be able to: Detect contaminants in food samples using chemical tests. (P.I. – 1.3.1, 2.2.2)

Performance Indicators:

P.I.- 1.1.1: **Remembering:** Recall key mathematical formulas and concepts relevant to engineering problems.

P.I.- 1.2.1: **Understanding:** Explain how mathematical models are used to represent engineering systems or processes.

P.I.- 1.3.1: **Remembering:** List fundamental engineering principles (e.g., Ohm's law, Bernoulli's equation) and their applications.

P.I.- 1.4.2: **Understanding:** Explain the functions of specialized engineering systems in the computer engineering domain.

P.I.- 2.1.2: **Understanding:** Explain the key features and scope of a complex engineering problem.

P.I.- 2.2.2: **Understanding:** Describe the steps involved in formulating a solution plan for an engineering problem.

P.I.- 2.2.3: **Applying:** Develop a basic solution plan using a systematic approach to solve an identified problem.

P.I.- 7.1.1: **Understanding:** Explain how engineering activities and industrial practices affect the environment, society, and economy.

P.I.- 7.2.1: **Creating:** Propose sustainable solutions based on environmental criteria.

Mapping of Course Outcomes with Learning Outcomes:

	Mapped to Learning Outcomes
CO1	1.1, 1.2, 4.1, 4.2, 5.1, 5.2, 5.3 and 5.4
CO2	2.2 & 2.2
CO3	3.1 & 3.2
CO4	6.1 & 6.2
CO5	7.1 & 7.2

Mapping of Course Outcomes with Programme Outcomes:

CO	PO1	PO2	PO3	PO4	PO5	PO7	PO8	PO9	PO10	PO11	PO12
CO1	4/9	--	--	--	--	--	--	--	--	--	--

Assessment Criteria of Learning Outcomes:

Learning Outcomes: The Learner will:	Assessment Criteria: The Learner can:	Evaluated under ISA/MSE/ESE/LAB
LO 1.1: <i>Describe types and properties of polymers. (PI 1.1.1) (CO1)</i>	- Correctly identifies various polymer types with examples - Describes key physical and chemical properties of polymers - Analyzes how different types exhibit unique properties based on structure	ISA MSE ESE
LO 1.2: <i>Illustrate synthesis processes and correlate structure with properties. (PI 1.2.1) (CO1)</i>	- Explains common synthesis processes with correct steps and conditions - Explains how structure influences physical properties (e.g., crystallinity, T_g) - Illustrates synthesis processes accurately with key reactants and catalysts.	MSE ISA ESE
LO 2.1: <i>Apply Nernst equation and electrochemical cell</i>	Correctly writes and interprets the Nernst equation with standard notations and units.	MSE

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

concepts in real-life scenarios. (PI 2.1.2) (CO2)	- Explains the function of an electrochemical cell with examples (e.g., Daniell cell) - Performs correct calculations of E_{cell} for given concentrations/conditions.	ISA ESE
LO 2.2: Analyse corrosion mechanisms and suggest appropriate prevention techniques. (PI 2.2.3) (CO2)	- Identifies various corrosion types with relevant examples - Explains mechanisms using relevant concepts (oxidation/reduction, electrochemical cells) - Suggests appropriate techniques based on identified corrosion type - Selects techniques appropriate to corrosion type and environment.	MSE ISA ESE ESE
LO 3.1: Classify batteries based on chemistry and structure. (PI 1.3.1) (CO3)	- Classifies batteries by chemistry (e.g., alkaline, lead-acid, Li-ion, NiMH) - Relates battery types to appropriate applications (e.g., EVs, UPS, wearables) - Differentiates batteries based on structure	MSE ISA LAB
LO 3.2: Evaluate suitability of energy storage devices for different applications. (PI 2.2.2) (CO3)	- Categorizes various devices with basic characteristics (type, energy density, etc.) - Explains parameters like energy/power density, lifecycle, and efficiency	MSE ESE
LO 4.1: Compare physical and chemical properties of Silicon and Germanium. (PI 1.1.1) (CO1)	- Describes basic characteristics (group, period, type of element) - Lists and compares major physical properties (e.g., band gap, conductivity) - Describes chemical properties and typical reactions.	ISA ISA MSE
LO 4.2: Describe isotopes and analyze semiconductor compounds such as GaAs, GaP, InP, InGaAs, ZrO, and HfO with industrial applications. (PI 1.2.1, PI 2.2.2) (CO1)	- Describes isotopes with correct examples and basic applications (e.g., nuclear, medical) - Describes key properties like band gap, electrical behavior, and usage in devices.	ISA ISA
LO 5.1: Explain structure, synthesis, and applications of nanomaterials such as graphene, fullerenes, and carbon nanotubes. (PI 1.1.1, PI 1.2.1) (CO1)	- Explains synthesis methods with reactants, processes, and equipment - Explains how structure determines key properties (e.g., conductivity, strength) - Describes atomic/molecular structures of graphene, fullerenes, CNTs clearly.	ISA ISA ISA
LO 5.2: Describe the types, properties, and uses of composite materials. (PI 2.2.2) (CO1)	- Describes key mechanical, thermal, and chemical properties with some reasoning - Describes specific applications with context (e.g., "carbon fiber in aerospace panels")	ISA ISA

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

LO 5.3: <i>Illustrate the working and characteristics of shape memory alloys and their transformations. (PI 1.3.1, PI 2.1.2) (CO1)</i>	- Lists and explains key characteristics like superelasticity, pseudoelasticity - Uses appropriate terms like martensite, austenite, transformation temperature - Explains how SMA is used in engineering contexts (e.g., stents, actuators)	ISA ISA
LO 5.4: <i>Evaluate functionalities and applications of smart materials like self-assembled nanostructures and magnetostrictive materials. (PI 7.2.1, PI 1.4.2) (CO1)</i>	- Explains how these materials function under specific stimuli (e.g., magnetic field, pH, temperature) - Describes real-world engineering applications in detail (e.g., vibration control, nano-drug delivery)	ISA MSE
LO 6.1: <i>Explain principles of UV-Vis, IR, and NMR spectroscopy. (PI 1.1.1) (CO4)</i>	- Explains basic principle (electronic transitions, λ_{max}) - Explains each spectroscopy type clearly - Uses basic correct terms (e.g., λ_{max}, functional group region, chemical shift)	ISA MSE ESE
LO 6.2: <i>Analyse spectra and infer structural information. (PI 1.4.2) (CO4)</i>	Uses correct principles (e.g., Beer-Lambert law, chemical shift rules) in analysis	ESE
LO 7.1: <i>Identify and explain 12 principles of Green Chemistry. (PI 7.1.1) (CO5)</i>	- Identifies most of the 12 principles with correct titles - Explains principles clearly with basic examples - Uses appropriate green chemistry terms in explanations	MSE ESE LAB
LO 7.2: <i>Propose eco-friendly alternatives to conventional processes. (PI 7.2.1) (CO5)</i>	- Clearly explains a conventional process, including its environmental impact - Applies basic green chemistry principles to suggest improvements.	MSE ESE

Course Name: Engineering Graphics

Course Code: ESC01T & ESC01P

Vertical/ Sub-Vertical: BESC_ESC

K-S-A Mapping: Knowledge & Skill

Pre-requisite required: Basic Geometry

Pre-requisite for: Computer Graphics, Electrical Circuit Analysis, Probabilistic Graphical Model, Biological Modelling and Simulation, Robotics in Medicine, Installation & Maintenance of Medical devices

Recommended Semester: 1 & 2

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
ES01T	2	-	2	-
ES01P	-	2	-	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (ES01T)	15 (~20%)	20 (~30%)	40 (~50%)	75 (100%)
Practical (ES01P)	25 (50%)	-	25 (50%)	50 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

To improve the visualization skills of the learners, with imparting the learner's ability to read a drawing. This course also imparts and inculcates learners to understand the theory of projection.

Course Objectives:

- To understand the concepts of the Engineering Graphics.
- To know how to use drawing instruments for drafting and dimensioning.
- To understand visualisation technic and skills of Engineering Graphics.
- To know the Construction of 3D object.
- To introduce the tools of Computer Aided drafting (CAD).

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Understand conventional method and usage of CAD software.	Understanding
CO2	Apply the basic principles of projections and visualization to communicate ideas graphically.	Applying
CO3	Construct the drawing of curves, points, straight lines, and planes using concept of projections.	Analysing
CO4	Interpret the three-dimensional pictorial objects and represent in two-dimensional views.	Evaluating
CO5	Construct three dimensional shapes from two dimensional views using the concept of projections.	Evaluating

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Introduction to Engineering Graphics and CAD	Learning Objective: Introduce the fundamentals of engineering graphics and CAD tools essential for technical drawing and visualization. (CO1) Contents: Introduction and importance of engineering graphics. Introduction of different types of the quadrants, method of projection, lines and dimensioning. Drawing instruments and their usage. Introduction Computer Aided Design and Drafting (CADD or CAD) software and operations, menu system and toolbars. Self-Learning Topics: Basic Geometry and Constructions of lines and shapes. Learning Outcomes: A learner will be able to: - Identify the importance of engineering graphics in technical communication. (PI-1.1.2) (CO1) - Explain the types of quadrants and methods of projection used in engineering drawings. (PI-1.2.2) (CO1) - Demonstrate the use of drawing instruments and perform basic dimensioning and line work. (PI-1.3.1) (CO1) - Navigate CAD software interface, menu systems, and toolbars to create basic drawings. (PI-1.4.2) (CO1)	3
2	Engineering Curve	Learning Objective: Develop the ability to construct engineering curves like cycloids, involutes, and helices using standard geometric methods. (CO3) Contents: Basic construction of cycloid, involutes, and helix of cylinder.	4

		Self-Learning Topics: NIL Learning Outcomes: A learner will be able to: 1. Construct the path of a cycloid using basic geometric techniques. (PI-3.1.1) (CO3) 2. Draw the involute of a circle and apply it in mechanical contexts such as gear tooth profiles. (PI-3.1.2) (CO3) 3. Generate the helix of a cylinder and interpret its application in threaded components. (PI-3.1.3)(CO3)	
3	Projection of Points & lines	Learning Objective: Apply projection techniques to represent lines inclined to both horizontal and vertical planes using the first angle projection method. (CO2, CO3) Contents: Projections of lines, inclined to both the reference planes HP and VP as per the first angle projection method. Learning Outcomes: A learner will be able to: 1 Interpret the concept of reference planes and first angle projection system. (PI-2.1.2) (CO2) 2 Construct projections of lines inclined to both HP and VP using graphical methods. (PI-3.1.4) (CO3) 3 Analyse the true length and true inclinations of lines from given projections. (PI-3.1.5) (CO3)	4
4	Projection of Planes	Learning Objective: Construct and interpret the projections of various geometric planes inclined to both HP and VP using the first angle projection method. (CO2, CO3). Content: Projection of rectangular, triangular, square, pentagonal, hexagonal, and circular planes, inclined to both the reference planes HP and VP as per the first angle projection method. Learning Outcomes: A learner will be able to: 5 Identify different types of planes (rectangular, triangular, polygonal, and circular) and their positions with respect to reference planes. (PI-2.2.3)(CO2) 6 Construct accurate projections of inclined planes using the first angle projection method. (PI-3.1.6)(CO3)	4

		7 Analyze the orientation and true shape of inclined planes through graphical representation. (PI-3.1.7)(CO3)	
5	Orthographic Projections	Learning Objective: Develop skills to create orthographic and sectional views of machine parts using manual and CAD methods with appropriate dimensions and annotations. (CO1, CO4). Content: Drawing orthographic views from pictorial projections. Sectional orthographic Projections of a simple machine part as per the first angle projection method. - By drafting in the sketchbook as well as on CAD software. CAD Drawing: Applying dimensions to objects, applying annotations to drawings, setting up and use of layers, changing of the line properties, Printing setup and procedure. Different CAD Tools and usage- Draw tools, modify tools, properties, copy selection, dimensioning and editing (text height and arrow size). Learning Outcomes: <i>A learner will be able to:</i> 1 Interpret pictorial views and convert them into accurate orthographic projections using the first angle method. (PI-4.1.1)(CO4) 2 Generate sectional orthographic views of simple machine components using sketchbook and CAD software. (PI-4.1.2)(CO4) 3 Use CAD tools to apply dimensions, annotations, layers, and line properties effectively. (PI-1.5.1)(CO1) 4 Demonstrate CAD operations such as drawing, modifying, copying, dimensioning, and printing a technical drawing. (PI-1.6.1)(CO1)	8
6	Isometric Views	Learning Objective: Construct isometric views of blocks with planar and cylindrical features using manual and CAD drafting techniques. (CO1, CO5). Contents: Drawing Isometric views from given views of simple blocks with plane, cylindrical surfaces, and circular holes. - By drafting in the sketchbook as well as on CAD software CAD Drawing: Switching to isometric drafting mode, switch /change to different ISO planes, ISO circles on different ISO planes, Different CAD Tools and usage- Draw tools, Modify tools, Properties of line. Learning Outcomes:	7

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		<i>A learner will be able to:</i> 1 Convert orthographic views into isometric drawings of objects with planar, cylindrical surfaces, and circular holes. (PI-5.1.1)(CO5) 2 Create isometric drawings manually and by using CAD tools, including switching ISO planes and drawing ISO circles. (PI-5.1.2)(CO5) 3 Apply CAD features like draw tools, modify tools, and line properties to complete accurate isometric projections. (PI-1.7.1) (CO1)	
Total			30

Suggested List of Practical:

Sr No.	Suggested Topic(s)
1.	Introduction and practice of AutoCAD software Learning Outcomes: <i>A learner will be able to:</i> 1. Navigate CAD software interface, menu systems, and toolbars to create basic drawings. (P.I. – 1.4.2) (CO1)
2.	Drawing of Water Tap Learning Outcomes: <i>A learner will be able to:</i> 1. Use CAD tools to apply dimensions, annotations, layers, and line properties effectively. (P.I. – 1.5.1) (CO1).
3.	Orthographic Projection Learning Outcomes: <i>A learner will be able to:</i> 1. Interpret pictorial views and convert them into accurate orthographic projections using the first angle method. (P.I. – 4.1.1) (CO4).
4.	Isometric Projection Learning Outcomes: <i>A learner will be able to:</i> 1. Convert orthographic views into isometric drawings of objects with planar, cylindrical surfaces, and circular holes. (P.I. – 5.1.1) (CO5)
5.	Floor Plan Learning Outcomes: <i>A learner will be able to:</i> 1. Demonstrate CAD operations such as drawing, modifying, copying, dimensioning, and printing a technical drawing. (P.I. – 1.6.1) (CO1)
6.	2D Views of Car/Vehicle Learning Outcomes: <i>A learner will be able to:</i> 1. Interpret pictorial views and convert them into accurate orthographic projections using the first angle method. (P.I. – 4.1.1) (CO4)

Performance Indicators:

- P.I.- 1.1.2: **Remembering:** Identify the importance of engineering graphics in technical communication.
- P.I.- 1.2.2: **Understanding:** Explain the types of quadrants and methods of projection used in engineering drawings.
- P.I.- 1.3.1: **Applying:** Demonstrate the use of drawing instruments and perform basic dimensioning and line work.
- P.I.- 1.4.2: **Applying:** Navigate CAD software interface, menu systems, and toolbars to create basic drawings.
- P.I.- 1.5.1: **Applying:** Use CAD tools to apply dimensions, annotations, layers, and line properties effectively.
- P.I.- 1.6.1: **Applying:** Demonstrate CAD operations such as drawing, modifying, copying, dimensioning, and printing a technical drawing.
- P.I.- 1.7.1: **Applying:** Apply CAD features like draw tools, modify tools, and line properties to complete accurate isometric projections.
- P.I.- 2.1.2: **Understanding:** Interpret the concept of reference planes and first angle projection system.
- P.I.- 2.2.3: **Understanding:** Identify different types of planes (rectangular, triangular, polygonal, and circular) and their positions with respect to reference planes.
- P.I.- 3.1.1: **Applying:** Construct the path of a cycloid using basic geometric techniques.
- P.I.- 3.1.2: **Applying:** Draw the involute of a circle and apply it in mechanical contexts such as gear tooth profiles.
- P.I.- 3.1.3: **Applying:** Generate the helix of a cylinder and interpret its application in threaded components.
- P.I.- 3.1.4: **Applying:** Construct projections of lines inclined to both HP and VP using graphical methods.
- P.I.- 3.1.5: **Analyzing:** Analyze the true length and true inclinations of lines from given projections.
- P.I.- 3.1.6: **Applying:** Construct accurate projections of inclined planes using the first angle projection method.
- P.I.- 3.1.7: **Analyzing:** Analyze the orientation and true shape of inclined planes through graphical representation.
- P.I.- 4.1.1: **Applying:** Interpret pictorial views and convert them into accurate orthographic projections using the first angle method.
- P.I.- 4.1.2: **Applying:** Generate sectional orthographic views of simple machine components using sketchbook and CAD software.
- P.I.- 5.1.1: **Applying:** Convert orthographic views into isometric drawings of objects with planar, cylindrical surfaces, and circular holes.
- P.I.- 5.1.2: **Applying:** Create isometric drawings manually and by using CAD tools, including switching ISO planes and drawing ISO circles.

Assessment Criteria of Learning Outcomes:

Learning Outcomes: The Learner will:	Assessment Criteria: The Learner can:	Evaluated under ISA/MSE/ESE/LAB
LO 1.1: Identify the importance of engineering graphics in technical communication. (P.I.- 1.1.2) (CO1)	- Define engineering graphics and its purpose in communication. - Explain real-world applications of engineering drawings. - List the industries where engineering graphics is used.	ISA, MSE
LO 1.4: Navigate CAD software interface, menu systems, and toolbars. (P.I.- 1.4.2) (CO1)	- Open and operate basic CAD interface elements. - Locate and use standard menu tools. - Demonstrate drawing a simple figure using toolbar.	ISA, LAB
LO 2.2: Draw the involute of a circle and apply it in mechanical contexts. (P.I.- 3.1.2) (CO3)	- Sketch an accurate involute of a circle. - Label tangent development method correctly. - Explain real-life application of involute in gears.	ISA, MSE
LO3.2: Construct projections of lines inclined to both HP and VP. (P.I.- 3.1.4) (CO3)	- Identify correct projection reference planes. - Draw projections of a line using correct angles. - Demonstrate true length and inclination.	MSE, ESE
LO 4.1: Identify types of planes and their positions w.r.t. reference planes. (P.I.- 2.2.3) (CO2)	- Classify plane surfaces by shape. - Distinguish between different plane positions. - Draw examples with proper quadrant placement.	ISA, MSE
LO 5.1: Convert pictorial views into orthographic projections. (P.I.- 4.1.1) (CO4)	- Visualize and draw 3 main views (top, front, side). - Maintain scale and proportion. - Label views correctly.	LAB, ESE
LO 6.1: Convert orthographic views into isometric drawings. (P.I.- 5.1.1) (CO5)	- Identify object orientation from 2D views. - Draw an isometric view with correct dimensions. - Use CAD software or sketching tools appropriately.	LAB, ISA, ESE

Tools / Technologies / Software Learnt:

- **CAD Software:** AutoCAD, DraftSight, LibreCAD
- **2D & 3D Drawing Tools:** AutoCAD Isometric Drafting, Orthographic Projection Tools
- **Annotation & Dimensioning Tools:** Dimensioning Toolbars, Text & Leader Tools, Hatch & Section tools
- **Layer and Property Management:** Layer Manager, Lineweight, Linetype Control, Object Properties
- **CAD File Operations:** Plotting & Printing Tools, DWG File Handling, Template Usage
- **Visualization Tools:** Isometric Grid, UCS (User Coordinate System), View Controls
- **Simulation & Practice Platforms (if applicable):** TinkerCAD, Fusion 360 (for extended practice)
- **Learning Platforms:** Autodesk Education Community, LinkedIn Learning – AutoCAD tutorials, NPTEL CAD Video Lectures

Course Name: Object Oriented Programming

Course Code: VSEC02T & VSEC02P

Vertical/ Sub-Vertical: SC_VSEC

K-S-A Mapping: Knowledge & Skill

Pre-requisite required: VSEC01T & VSEC01P (Structured Programming)

Pre-requisite for: VSEC03 (Python Programming), PRJEC01 (Project)

Recommended Semester: 2

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
VSEC02T	2	-	2	-
VSEC02P	-	2	-	1

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (CE01T)	15 (~20%)	20 (~30%)	40 (~50%)	75 (100%)
Practical (CE01P)	25 (50%)	-	25 (50%)	50 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

The course aims to advance learner's knowledge in problem solving and programming principles for real world applications through object-oriented programming using Java language. The course emphasizes data abstraction and object-oriented programming design through the implementation of classes, objects and related concept like Inheritance, Polymorphism, Exception Handling, Multithreading and Applets.

Course Objectives:

1. To introduce students to the foundational concepts of Java programming, including its features, platform independence for developing basic programs.
2. To enable learners to implement object-oriented programming principles such as classes, objects, constructors, method overloading, and object passing, fostering modular and reusable Java code.
3. To apply advanced OOP concepts like inheritance, interfaces, polymorphism, and wrapper classes (String, String Buffer, Vector) to develop extensible and maintainable Java applications.

4. To develop the ability to handle runtime errors gracefully by applying exception handling mechanisms for building robust applications.
5. To introduce students to concurrent programming and application modularization for building interactive and scalable Java programs.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Explain the features of Java and its platform-independent nature using bytecode, JVM, and JRE.	Understand
CO2	Develop basic Java programs using data types, operators, control structures, static members, and arrays (1D and 2D).	Apply
CO3	Construct modular programs using object-oriented programming concepts such as classes, constructors, object passing, and method overloading.	Apply
CO4	Implement inheritance, interfaces, polymorphism, and use of wrapper classes to enhance code reusability and flexibility.	Analyse
CO5	Apply exception handling techniques such as try-catch, throw, throws, and user-defined exceptions for developing error-resilient applications	Evaluate
CO6	Design multithreaded Java applications and modular programs using packages and interactive applets.	Create

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Introduction to Java	Learning Objective: To enable students to understand and apply the foundational concepts of Java programming such as platform independence, data types, control structures, static members, and arrays to develop simple and structured programs.(CO1, CO2) Contents: Features of Java, Platform Independence – Byte Code, JVM, JRE. Data Types, Operators, Control Structures, Static Data, Static Function, 1D Array and 2D Array Self-Learning Topics: Array Data Structure Learning Outcomes: LO1.1: Describe the features of Java and explain how bytecode, JVM, and JRE contribute to its platform independence.(PI1.4.1 & PI 2.1.2)(CO1) LO1.2: Use data types, operators, and control structures to write basic Java programs. (PI1.3.3 & PI1.4.3) (CO2) LO1.3: Implement static variables and static functions to demonstrate shared functionality in Java. (PI2.4.3)(CO2)	4

		LO1.4: Construct Java programs using one-dimensional and two-dimensional arrays to manipulate tabular data. (PI2.2.3 & PI1.3.3) (CO2)	
2	Object Oriented Programming	Learning Objective: To enable students to construct modular and reusable programs by applying core object-oriented programming concepts such as class design, constructors, method overloading, object passing, and array of objects in Java.(CO3) Contents: Classes and Objects, Instance Variables, Constructors, Object Passing Methods, Method Overloading, Array of Objects Learning Outcomes: A learner will be able to: LO2.1: Define and use classes, objects, and instance variables to model real-world entities in Java programs. (PI1.4.1 & PI1.3.2)(CO3) LO2.2: Implement constructors (default and parameterized) to initialize Java objects (PI1.3.3 & PI2.4.3) (CO3) LO2.3: Demonstrate method overloading and object passing techniques to achieve functional flexibility. (PI1.4.3 & PI2.2.3)(CO3) LO2.4: Create and manipulate arrays of objects to organize and manage grouped object data. (PI1.3.6 & PI1.4.6)(CO3)	4
3	Inheritance	Learning Objective: To equip students with the ability to develop flexible and reusable Java programs by applying advanced object-oriented concepts such as inheritance, interfaces, method overriding, and wrapper classes.(CO4) Contents: Concept and Types, Constructors in Inheritance, Method Overriding and Dynamic Method Dispatch, abstract and final keyword, Interfaces – Concept and Significance, Wrapper Classes – String, StringBuffer, Vector Learning Outcomes: A learner will be able to: LO3.1: Explain the concept and types of inheritance and the use of constructors in inheritance(PI2.1.2 & PI1.3.2)(CO4) LO3.2: Apply method overriding and dynamic method dispatch to implement runtime polymorphism.(PI1.4.3 & PI2.4.3)(CO4) LO3.3: Use abstract classes, final keywords, and interfaces to build structured and extendable programs.(PI1.4.4 & PI2.2.4)(CO4)	4
4	Exception Handling	Learning Objective: To enable students to develop robust Java applications by applying exception handling mechanisms such as try-catch blocks, throws/throw keywords, and custom exception classes to manage runtime errors effectively.(CO5)	7

		Content: To enable students to develop robust Java applications by applying exception handling mechanisms such as try-catch blocks, throws/throw keywords, and custom exception classes to manage runtime errors effectively. Learning Outcomes: A learner will be able to: LO4.1: Explain the need for exception handling and distinguish between checked and unchecked exceptions (PI2.1. & PI2.4.2) (CO5) LO4.2: Analyze the flow of control in nested or multiple catch blocks to ensure error handling effectiveness. (PI2.4.4) (CO5) LO4.5: Create and use user-defined exceptions to handle domain-specific errors in Java applications.(PI2.4.5 & PI1.4.6) (CO5)	
5	Multithreaded Programming	Learning Objective: To enable students to design and manage concurrent programs by applying thread creation techniques, thread lifecycle methods, synchronization mechanisms, and exception handling in Java. Content: Creating Thread – Different Methods, Using Thread Methods, Thread Exceptions, Priorities, Life Cycle of Thread Synchronization Learning Outcomes: A learner will be able to: LO5.1: Explain the thread lifecycle and different ways of creating and managing threads in Java. (PI2.1.2 & PI3.2.2)(CO6) LO5.2: Implement multithreading using Thread class and Runnable interface with appropriate thread methods and priorities.(PI1.4.3 & PI2.4.3)(CO6) LO5.3: Handle thread-related exceptions and apply synchronization to avoid race conditions in concurrent programs.(PI2.4.4 & PI3.1.4)(CO6) LO5.4: Design efficient multithreaded applications incorporating synchronization, priorities, and exception handling.(PI1.4.6 & PI2.2.6)(CO6)	5
6	Hashing	Learning Objective To enable students to design modular and interactive Java applications by organizing code using packages and developing applets using life cycle methods and graphical capabilities.(CO6) Contents: Inbuilt Package, Importing Packages, User Defined Packages, Naming Packages, Advantages of Packages, Applet Basics, Applet Life Cycle, Applet Drawing Methods.	5

		Learning Outcomes: A learner will be able to: LO6.1: Explain the concept, purpose, and benefits of using inbuilt and user-defined packages in Java. terms of efficiency and reliability. (PI2.1.2 & PI3.2.3) (CO6) LO6.2: Implement modular Java applications using package creation, importing, and naming conventions.(PI2.4.3 & PI1.4.3)(CO6) LO6.3: Develop interactive Java applets using applet life cycle methods and override paint() to draw on the screen.(PI1.4.6 & PI2.2.6)(CO6) LO6.4: Analyze the structure of modular Java programs using packages and applets to ensure maintainability and scalability.(PI2.4.4 & PI3.1.4)(CO6)	
Total			30

Performance Indicators:

PI 1.1.1 Remembering: Recall key mathematical formulas and concepts relevant to engineering problems.

PI 1.3.1 Remembering: List fundamental engineering principles (e.g., Ohm's law, Bernoulli's equation) and their applications.

PI 1.3.2 Understanding: Explain the relevance of basic engineering principles to real-world problems.

PI 1.3.3 Applying: Perform calculations and simulations to solve simple engineering tasks.

PI 1.3.6 Creating: Design a system or solution integrating basic engineering fundamentals to meet specific requirements

PI 1.4.1 Remembering: Identify key concepts and tools in specialized areas such as computer architecture, AI, programming

PI 1.4.3 Applying: Implement domain-specific tools and technologies

PI 1.4.4 Analyzing: Compare and contrast different specialized engineering approaches for solving a given problem

PI 1.4.6 Creating: Propose innovative solutions using advanced computer engineering knowledge and tools.

PI 2.1.1 Remembering: Recall relevant engineering principles, theories, and concepts to identify a problem.

PI 2.1.2 Understanding: Explain the key features and scope of a complex engineering problem.

PI 2.1.3 Applying: Use standard problem-identification techniques (e.g., root cause analysis) to define an engineering challenge

PI 2.1.4 Analyzing: Decompose a complex engineering problem into its constituent parts to identify critical aspects

PI 2.1.5 Evaluating: Assess the relevance and significance of various problem aspects using evidence-based reasoning

PI 2.2.1 Remembering: List standard methodologies and tools applicable to solving engineering problems.

PI 2.2.2 Understanding: Describe the steps involved in formulating a solution plan for an engineering problem

PI 2.2.3 Applying: Develop a basic solution plan using a systematic approach to solve an identified problem.

PI 2.2.4 Analyzing: Evaluate various solution methodologies to determine the most effective approach for a given problem

PI 2.2.6 Creating: Design a comprehensive and innovative solution plan, integrating multidisciplinary methods if necessary

PI 2.4.1 Remembering: Recall procedures and tools required for executing an engineering solution process.

PI 2.4.2 Understanding: Explain the solution process and its relevance to the identified engineering problem.

PI 2.4.3 Applying: Implement the solution process using appropriate tools, software, or experimental setups.

PI 2.4.4 Analyzing: Examine the results of the solution process to determine trends, patterns, and inconsistencies

PI 2.4.5 Evaluating: Critically assess the solution's accuracy and efficiency, and propose improvements if necessary

PI3.1.3 Applying: Translate real-world challenges into structured engineering problem statements.

PI 3.1.4 Analyzing: Break down the problem into sub-problems and evaluate its complexity in engineering terms

PI 3.2.1 Remembering: List potential design approaches and tools relevant to solving the problem.

PI 3.2.2 Understanding: Describe the principles and methodologies used to generate alternative design solutions

PI 3.2.3 Applying: Propose multiple design concepts addressing the problem's constraints and requirements.

PI 4.1.4 Analyzing: Break down the problem into components and critically assess the relationships between them

Mapping of Course Outcomes with Learning Outcomes:

	Mapped to Learning Outcomes
CO1	1.1, 2.1, 3.1, 4.1, 5.1 and 6.1
CO2	1.2, 1.3, 2.2, 3.2, 4.2, 5.2 and 6.2
CO3	2.3, 3.3, 4.3, 5.3 and 6.3

Preamble:

The course, Professional Skills, will groom students in the areas of developing professional etiquettes, building digital profiles, imbibing workplace ethics, and organizational behaviour. This course will also be an essential guide in building business communication and soft skills concepts.

Course Objectives:

- Recognize and apply the do's and don'ts of participation in group discussions, resume writing and interviews. (K)
- To develop professional etiquettes and build an effective digital profile for positive communication and workplace presence. (A)
- Learn and demonstrate the dynamics of various types of interpersonal skills through team presentations and role play sessions. (S)
- Comprehend various ethical and unethical practices and ethical decision-making and concepts like intellectual property rights, and plagiarism checks. (K)
- Learn about various personality traits, learning styles, productivity tools and understand SWOT. (A)

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

- To foster critical thinking, creativity, collaboration, and communication skills essential for success in the 21st-century workplace and society. (K)

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Observe and participate in Group Discussions and Mock Interviews on the lines of campus placement training.	Cognitive Application
CO2	Build a digital profile by demonstrating awareness of a professional persona	Cognitive Application
CO3	Identify various interpersonal skills through participation in presentations and role play.	Affective Responding
CO4	Differentiate between ethical and non-ethical behaviour through analysis of case studies.	Affective Valuing
CO5	Identify their personality traits and learning styles through activities like SWOT analysis	Affective Responding
CO6	Demonstrate awareness of 4 C's relevant to 21st Century Skills.	Affective Responding

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Employment Skills:	Learning Objective: Students will be able to demonstrate essential employment skills by effectively participating in group discussions, preparing professional resumes, and performing confidently in job interviews. (CO1). Contents: Job Application & Resume Writing Group Discussion Interview Skills Self-Learning Topics: Nil Learning Outcomes: A learner will be able to: 1.1 Demonstrate effective participation and articulation of viewpoints in group discussions. (P.I.- 9.1.1, 9.1.2, 9.2.2, 9.2.3, 9.3.1, 10.2.1 (CO1) 1.2 Prepare for and perform confidently in various interview formats. (P.I. -9.2.3, 9.2.4, 10.2.1, 10.2.2 (CO1) 1.3 Create a professional and tailored resume, and portfolios highlighting skills and achievements. (P.I. 10.1.2, 10.1.3 (CO1)	10
2	Professional Etiquettes	Learning Objective: Students will be able to demonstrate appropriate professional etiquette in academic and workplace environments by practicing respectful communication, maintaining decorum in formal interactions, and following accepted norms of behavior during meetings, emails, and networking events. (CO2) Contents:	4

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		Techniques Corporate Grooming and Workplace Etiquette Telephone Etiquette Netiquettes, Telephone Etiquette Digital Footprints, Social Media, Personal Profile Privacy Digital Profile Building (ePortfolio, LinkedIn) Self-Learning Topics: Nil Learning Outcomes: A learner will be able to: 2.10 Apply appropriate grooming and etiquette to project a professional image at the workplace. (P.I. –9.2.3, 9.2.4) (CO2) 2.11 Practice responsible and respectful behavior in telephone and all forms of digital communications. (P.I. –9.2.2, 9.2.3, 10.1.1) (CO2) 2.12 Manage digital footprints and ensure privacy across social media platforms and maintain a professional digital profile using ePortfolio and LinkedIn. (P.I. – 9.2.1, 10.1.1, 10.3.2) (CO2)	
3	Interpersonal Skills:	Learning Objective: Students will be able to develop effective interpersonal communication skills by engaging in active listening, expressing ideas clearly, providing constructive feedback, and collaborating productively in diverse teams and professional environments. (CO3) Contents: Assertiveness, Negotiation Leadership, Team Building Problem Solving, Decision Making Cultural and Emotional Intelligence Self-Learning Topics: Nil Learning Outcomes: A learner will be able to: 3.12 Demonstrate assertive communication, effective negotiation skills, and leadership qualities to influence and guide individuals and teams toward common goals. (P.I. –9.1.1, 9.2.1, 10.2.1) (CO3) 3.13 Collaborate effectively within teams to solve problems and make informed decisions in dynamic professional environments. Total			30

Suggested List of Practicals:

Sr No.	Suggested Topic(s)
1.	Group Discussion Learning Outcomes: <i>A learner will be able to:</i> 1.1 Demonstrate effective participation and articulation of viewpoints in group discussions. (P.I.- 9.1.1, 9.1.2, 9.2.2, 9.2.3, 9.3.1, 10.2.1) (CO1)
2.	Mock Interviews (Participate in Peer Interviews and learn the skills required to ace the Interviews) Learning Outcomes: <i>A learner will be able to:</i> 1.2 Prepare for and perform confidently in various interview formats. (P.I. –9.2.3, 9.2.4, 10.2.1, 10.2.2) (CO1)
3.	Case Study on Ethics Learning Outcomes: <i>A learner will be able to:</i> 7.4 Recognize and apply ethical principles in professional decision-making. (P.I. – 8.1.1 and 8.2.2) (CO4)
4.	E-Portfolio Learning Outcomes: <i>A learner will be able to:</i> 1.3 Create a professional and tailored resume, and portfolios highlighting skills and achievements. (P.I. 10.1.2, 10.1.3) (CO1)
5.	Video Resume Learning Outcomes: <i>A learner will be able to:</i> 1.3 Create a professional and tailored resume, and portfolios highlighting skills and achievements. (P.I. 10.1.2, 10.1.3) (CO1)
6.	Mini Project Learning Outcomes: <i>A learner will be able to:</i> 6.1 Generate original ideas and innovative solutions to problems. (P.I. – 10.1.2, 10.2.2 and 12.2.1, 12.2.2) (CO6)
7.	Interpersonal Skills Presentation Learning Outcomes: <i>A learner will be able to:</i> <i>A learner will be able to:</i> 3.1 Demonstrate assertive communication, effective negotiation skills, and leadership qualities to influence and guide individuals and teams toward common goals. (P.I. –9.1.1, 9.2.1, 10.2.1) (CO3)

Performance Indicators:

P.I. 8.1.1 - **Analyzing** :Analyze ethical issues in engineering practice and societal expectations.

P.I. 8.2.1- **Evaluating** : Evaluate the responsibility of engineers towards public safety and welfare.

P. I. 8.2.2 **Applying**: Examine and apply moral & ethical principles to known case studies.

P.I. 9.1.1 **Understanding**: Recognize a variety of working and learning preferences; appreciate the value of diversity on a team.

P.I. 9.2.1 **Remembering**: Demonstrate effective communication, problem-solving, conflict resolution and leadership skills

P.I. 9.2.2 **Understanding**: Treat other team members respectfully

P.I. 9.2.3 **Understanding**: Listen to other members

P.I. 9.2.4 **Understanding**: Maintain composure in difficult situations

P.I. 9.3.1 **Applying**: Present results as a team, with smooth integration of contributions from all individual efforts

P.I. 10.1.1 **Understanding**: Read, understand and interpret technical and non-technical information

P.I. 10.1.2- **Applying**: Produce clear, well-constructed, and well-supported written engineering documents.

P.I. 10.2.1- **Applying**: Listen to and comprehend information, instructions, and viewpoints of others

P.I. 10.2.2- **Understanding** Deliver effective oral presentations to technical and non-technical audiences

P.I. 12.1.2- **Analyzing**; Identify deficiencies or gaps in knowledge and demonstrate an ability to source information to close this gap

P.I. 12.2.1- **Remembering** Actively pursue self-learning, professional development, and staying updated with emerging technologies.

P.I. 12.2.2- **Remembering** Recognize the need and be able to clearly explain why it is vitally important to keep current regarding new developments in your field

P.I.- 1.1.1: **Remembering**: Students will gain knowledge to develop the traits of a suitable candidate with respect to resume writing, participating in group discussions, and facing interviews

P.I.- 1.2.2: **Understanding**: Students will understand the techniques to analyse problem statements and formulate solutions of problems using surveys and project work

P.I.- 1.3.1: **Remembering**: Students can demonstrate the key skills required to face GDs, interviews, and resume writing as an individual or a team member

P.I.- 1.3.2: **Understanding**: Students can exhibit professional presentation skills both individually or in a team

P.I.- 1.4.2: **Understanding**: Students can prepare themselves as an individual or as a part of a team for various corporate ethics and etiquettes

P.I.- 2.1.2: **Understanding**: Student will inculcate professional ethics to build stronger relationships in professional practices

P.I.- 2.1.3: **Applying**: Students will apply the skills of communicating effectively to deliver the right employment skills

P.I.- 2.1.4: **Analyzing**: Students will critically analyse the insights about communicating effectively during campus placements and competitive examinations

P.I.- 2.2.3: **Applying**: Students will develop effective communication strategies to build their inter-personal skills.

P.I.- 3.2.1: **Remembering**: Students will inculcate knowledge by communicating about contemporary issues and demonstrate the ethical code of conduct.

P.I.- 3.2.2: **Understanding:** Students will learn to communicate effectively to deliver the right employment skills

P.I.- 3.2.3: **Applying:** Students can apply their skills to prepare themselves as an individual or as a part of a team for various corporate ethics and etiquettes

P.I.- 3.3.1: **Remembering:** Students will gain fundamental knowledge of various inter-personal skills like team building, motivation, assertiveness, conflict resolution etc., to progress professionally

P.I.- 3.3.2: **Understanding:** Students will explain and demonstrate the formal presentations using modern ICT tools for a successful career that meets the global corporate world virtual requirements.

Detailed Syllabus of Indian Knowledge System Courses

Course Name: Indian Traditional Knowledge System

Course Code: IKS01

Vertical/ Sub-Vertical: HSSM_IKS

K-S-A Mapping: Knowledge, Skill & Attitude

Pre-requisite required: NIL

Pre-requisite for: NIL

Recommended Semester: 2

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
IKS01	2	-	2	-
	-		-	

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (IKS01)	73 (100%)	-	-	75 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

This course explores its interdisciplinary nature—spanning philosophy, science, technology, art, and ecology—while highlighting its relevance to contemporary education and innovation. Through critical study of ancient texts and practices, students will engage with indigenous perspectives that foster holistic thinking and sustainable solutions.

Course Objectives:

- To understand the concepts of Indian Traditional Knowledge.
- To understand the importance of the roots of the knowledge system.
- To reflect on the thought process, reasoning, and inference.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Understand the rich history of the Indian Traditional Knowledge System	Understanding
CO2	Understand the different areas of contributions from India	Applying
CO3	Analyse the different principles of traditional knowledge in modern systems	Analysing

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Review of Scientific Literature in Sanskrit:	Learning Objective: To critically analyze and evaluate classical Sanskrit texts for their contributions to traditional scientific knowledge systems, such as Ayurveda, astronomy, mathematics, and linguistics, and to develop the ability to contextualize these contributions within both historical and contemporary frameworks. (CO1, CO2) Contents: References of sciences /scientific knowledge through different textual sources. Self-Learning Topics: Nil Learning Outcomes: A learner will be able to: 5.1 Gain an overview of the vast repository of scientific knowledge preserved in Sanskrit texts (P.I. 10.1.1) CO1 5.2 Familiarize with specific works like Aryabhatiya (astronomy), Charaka Samhita (medicine), and Sulbasutras (geometry) (P.I.12.1.1) CO2 5.3 Learn how ancient principles from Sanskrit texts can be applied to modern sciences like astronomy, medicine, and environmental studies (P.I.12.1.2) CO2	6
2	Chemistry and Mathematics:	Learning Objective: To explore and interpret key concepts, techniques, and contributions of ancient Indian scholars in the fields of chemistry (Rasashastra) and mathematics (Ganitashastra), and to understand their relevance and application in the evolution of scientific thought and practices (CO2, CO3). Contents: Various treatises on Chemistry, Use of Chemistry in Medicines, Metallurgy, Use of Chemistry for occult practices, Mathematical concepts through Shulbasutras, Development of different types of mathematical branches and treatises based on that, Development of Astronomy etc. Learning Outcomes: A learner will be able to: 2.1 Learn about the use of alchemy in Ayurveda and traditional medicine, including processes like purification and transformation of metals (P.I. 12.2.1)CO2 2.2 Learn about ancient Indian metallurgical techniques, including the extraction, alloying, and casting of metals as described in texts like Krishi-Parashara and Brihatsamhita (P.I. 12.2.2) CO2 2.3 Understand the contributions of mathematicians like Aryabhata, Bhaskara, and Brahmagupta to global mathematical advancements (P.I. 12.2.1) CO2 2.4 Learn about the Indian contributions to astronomy, including planetary motion, eclipses, and time calculation, as described in Surya Siddhanta and Aryabhatiya (P.I. 12.3.1) CO3	6
3	Dietetics:	Learning Objective: To examine the principles of ancient Indian dietetics as outlined in classical texts such as Ayurveda, focusing on the relationship between food, health, and seasonal/regional	7

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		<i>variations, and to assess their applicability in promoting holistic well-being today. (CO1, CO2, CO3).</i> Content: Study of different texts based on culinary art Nalapakadarpana, Bhojanakuthuhalam, Supashastra, Modes of preservation of food, Dietary guidelines through branches of Ayurveda, Food and Diseases, etc. Learning Outcomes: A learner will be able to: 3.1 Learn traditional methods of food preservation such as fermentation, pickling, drying, and smoking (P.I2.2.1) CO1 3.2 Study the dietary principles and guidelines described in Ayurvedic texts, emphasizing balance (Tridosha), seasonal eating, and personalized nutrition (P.I. 12.3.1) CO1 3.3 Explore the role of food as medicine in Ayurveda, focusing on how specific dietary practices can prevent and manage diseases (P.I. 12.1.2) CO2 3.4 Study ancient practices of food presentation, garnishing, and plating as described in culinary texts (P.I. 12.2.1. 12.2.2) CO3 3.5 Study ancient practices of food presentation, garnishing, and plating as described in culinary texts (P.I. 12.3.1) CO2	
4	Agriculture, Astronomy, and Zoology	Learning Objective: To investigate the foundational knowledge and practices in agriculture, astronomy, and zoology as reflected in ancient Indian texts, and to appreciate their scientific insights, innovations, and environmental harmony in the context of traditional knowledge systems.(CO2, CO3). Content: Study of Krishisuktas, Krishiparashara, Brihatsamhita, Types of crops, Manures, Types of land- Devamatruka, Nadimatruka, Indian Astronomy, Use of animals in warfare, Animal husbandry, Animals for medicine. Learning Outcomes: A learner will be able to: 5.16 Learn about the types of crops, their cultivation cycles, and their significance in ancient Indian agronomy (P.I0. 2.1) CO2 5.17 Understand the classification of land types like Devamatruka and Nadimatruka based on fertility, water retention, and suitability for specific crops (P.I2.1.2) CO2 5.18 Explore the role of Indian astronomy in agricultural practices, including the timing of sowing, harvesting, and irrigation (P.I2.2.1) CO3 5.19 Learn about the historical use of animals like horses, elephants, and others in warfare strategies and their impact(P.I. 12.3.1) CO3 5.20 Study ancient practices of animal husbandry, focusing on their role in supporting agriculture and society(P.I. 12.3.2) CO3 5.21 Understand the medicinal uses of animals and animal-derived products as described in ancient texts (P.I.12.3.1) CO2	6
Total			30

Suggested List of Practicals:

Sr No.	Suggested Topic(s)
1.	Poster Presentation Learning Outcomes: A learner will be able to: 1.1 Gain an overview of the vast repository of scientific knowledge preserved in Sanskrit texts (P.I. 10.1.1) (CO1)
2.	Blog Writing Learning Outcomes: A learner will be able to: 2.4 Learn about the Indian contributions to astronomy, including planetary motion, eclipses, and time calculation, as described in Surya Siddhanta and Aryabhatiya (P.I. 12.3.1) CO2
3.	Book Review Learning Outcomes: A learner will be able to: 3.4 Study ancient practices of food presentation, garnishing, and plating as described in culinary texts (P.I. – 12..2.1) (CO3).
4.	Question and Answers Learning Outcomes: A learner will be able to: 3.1 Learn traditional methods of food preservation such as fermentation, pickling, drying, and smoking (P.I.2.2.1) (CO2)
5.	Essay Writing Learning Outcomes: A learner will be able to: 5.1 Learn about the types of crops, their cultivation cycles, and their significance in ancient Indian agronomy (P.I. 10. 2.1) (CO3)
6.	Infographics Learning Outcomes: A learner will be able to: 5.3 Explore the role of Indian astronomy in agricultural practices, including the timing of sowing, harvesting, and irrigation (P.I.2.2.1, 12.3.2 (CO3)

Performance Indicators:

- P.I.- 10.1.1 **Remembering:** Read, understand and interpret technical and non-technical information
- P.I.- 10.2.1 **Understanding:** Listen to and comprehend information, instructions, and viewpoints of others
- P.I.- 12.2.1 **Remembering:** Identify historic points of technological advance in engineering that required practitioners to seek education in order to stay current
- P.I.- 12.3.1 **Understanding:** Source and comprehend technical literature and other credible sources of information
- P.I.-12.3.2 **Analyzing:** Analyze sourced technical and popular information for feasibility, viability, sustainability, etc.
- P.I.-12.2.2 **Understanding:** Recognize the need and be able to clearly explain why it is vitally important to keep current regarding new developments in your field

Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Preamble:

This course introduces learners to the framework that defines India's political and legal systems. It emphasizes constitutional philosophy, fundamental rights and duties, governance mechanisms, and landmark judgments, fostering responsible citizenship and democratic values.

Course Objectives:

- To understand the concept and necessity of a Constitution.
- To interpret the ideals enshrined in the Constitution.
- To comprehend the significance of Fundamental Rights and Duties.
- To gain knowledge of the Indian parliamentary and judicial systems.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Learner will be able to understand constitution principles	Remembering
CO2	Learner will be able to co-relate with political system	Understanding
CO3	Learner will be able to pursue the values of civic life	Analysing
CO4	Learner will be able to exercise their rights and duties	Understanding

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Introduction to Indian Constitution	Learning Objective: Understand the historical context and philosophy behind the Constitution. Contents: Historical background, Constitutional philosophy. Self-Learning Topics: Constituent Assembly Debates, Role of Dr. B.R. Ambedkar. Learning Outcomes: A learner will be able to: 5.4 LO1.1: Recall historical origins and key objectives of the Indian Constitution (CO1) P.I. – 1.1.1, 5.5 LO1.2: Explain preamble values and their relevance (CO3) P.I. – 1.3.1	3
2	Citizenship & Fundamental Duties	Learning Objective: Understand who is an Indian citizen and the constitutional duties. Contents: Citizenship at commencement, Rights of overseas Indians, Duties of citizens. Self Learning topics: NRC, CAA provisions (non-political lens). Learning Outcomes: A learner will be able to: 2.13 Explain constitutional provisions regarding acquisition/loss of citizenship. (PI: 1.3.2, CO2) 2.14 Relate duties to everyday civic behaviour. (PI: 1.4.2, CO2)	3
3	Fundamental Rights	Learning Objective: Comprehend and evaluate the scope of rights and freedoms in the Constitution. Contents: Right to Equality, Freedom, Religion, Education, Remedies; UCC, Article 370, Reservations. Self Learning: PIL, RTI Act basics. Learning Outcomes: A learner will be able to: 3.15 Analyze the limitations and significance of each fundamental right. (PI: 2.1.4, CO3) 3.16 Evaluate constitutional debates like UCC and reservations. (PI: 3.2.1, CO3)	4
4	Directive Principles of	Learning Objective: Analyze socio-economic principles for governance and their constitutional directives.	4

	State Policy (DPSP)	Content: Justice, legal aid, Panchayati Raj, education, environment, UCC. Self Learning Topics: Sustainable Development Goals (SDGs) vs. DPSP. Learning Outcomes: A learner will be able to: 7.5 Identify key social and economic DPSPs and their impact. (PI: 3.3.1, CO3) 7.6 Compare DPSPs with Fundamental Rights. (PI: 3.2.1, CO3)	
5	The Parliament	Learning Objective: Understand the structure and functioning of legislative bodies. Content: Lok Sabha, Rajya Sabha, powers, law-making, amendment process. Self-Learning Topics: Budget session, Parliamentary privileges. Learning Outcomes: A learner will be able to: 5.22 Describe how laws are introduced and passed. (PI: 1.3.2, CO4) 5.23 Explain the amendment process and bicameral structure. (PI: 1.4.2, CO4)	4
6	Judiciary	Learning Objective: Understand the structure and jurisdiction of Indian courts. Contents: Supreme Court, High Courts, Subordinate courts, Quasi-judicial bodies Self-Learning Topics: Judicial review, Contempt of court. Learning Outcomes: A learner will be able to: 6.14 Describe functions of Supreme and High Courts. (PI: 1.3.1, CO5) 6.15 Explain the scope of judicial independence. (PI: 1.4.2, CO5)	4
7	Elections	Learning Objective: Understand the electoral process and related constitutional provisions. Content: Election Commission, Legislative elections, Court restrictions. Self-Learning Topics: Model Code of Conduct, NOTA.	4

		Learning Outcomes: <i>A learner will be able to:</i> 5.24 Explain the powers and functions of the Election Commission. (PI: 2.1.2, CO6) 5.25 Describe the legislative role in elections. (PI: 1.4.2, CO6)	
8	Landmark Cases	Learning Objective: Evaluate the constitutional impact of key judicial verdicts. Content: Nanavati, Shah Bano, Kesavananda Bharati, Vishakha. Self-Learning Topics: Maneka Gandhi, Golaknath, ADM Jabalpur. Learning Outcomes: <i>A learner will be able to:</i> 5.26 Analyze the legal and social implications of landmark cases. (PI: 3.2.3, CO7) 5.27 Justify the evolving nature of constitutional interpretation. (PI: 3.3.2, CO7)	4
Total			30

Performance Indicators:

- P.I.- 1.1.1: **Remembering:** Recall key mathematical formulas and concepts relevant to engineering problems.
- P.I.- 1.2.2: **Understanding:** Describe how basic science concepts apply to material behavior and engineering systems.
- P.I.- 1.3.1: **Remembering:** List fundamental engineering principles (e.g., Ohm's law, Bernoulli's equation) and their applications.
- P.I.- 1.3.2: **Understanding:** Explain the relevance of basic engineering principles to real-world problems.
- P.I.- 1.4.2: **Understanding:** Explain the functions of specialized engineering systems in the computer engineering domain.
- P.I.- 2.1.2: **Understanding:** Explain the key features and scope of a complex engineering problem.
- P.I.- 2.1.3: **Applying:** Use standard problem-identification techniques (e.g., root cause analysis) to define an engineering challenge.
- P.I.- 2.1.4: **Analyzing:** Decompose a complex engineering problem into its constituent parts to identify critical aspects.
- P.I.- 2.2.3: **Applying:** Develop a basic solution plan using a systematic approach to solve an identified problem.
- P.I.- 3.2.1: **Remembering:** List potential design approaches and tools relevant to solving the problem.
- P.I.- 3.2.2: **Understanding:** Describe the principles and methodologies used to generate alternative design solutions.
- P.I.- 3.2.3: **Applying:** Propose multiple design concepts addressing the problem's constraints and requirements.
- P.I.- 3.3.1: **Remembering:** Identify evaluation criteria (e.g., cost, safety, sustainability) for comparing design solutions.
- P.I.- 3.3.2: **Understanding:** Explain the trade-offs involved in selecting a particular design solution.

Assessment Criteria of Learning Outcomes:

Learning Outcomes: The Learner will:	Assessment Criteria: The Learner can:	Evaluated under ISA/MSE/ESE/LAB
LO1.1: Recall historical origins and key objectives of the Indian Constitution (CO1) P.I. – 1.1.1,	- Identify key events in India's constitutional development. - List the objectives stated in the Constitution's Preamble. - Match key dates with associated constitutional milestones. - Recognize contributions of major figures in constitution-making.	ISA
LO1.2: Explain preamble values and their relevance (CO3) P.I. – 1.3.1	- Define each value stated in the Preamble. - Explain how values like justice and equality are reflected in policies. - Relate Preamble values to recent Supreme Court judgments. - Analyze contemporary relevance of the term "Secular" or "Republic".	ISA
LO2.1 <i>Explain constitutional provisions regarding acquisition/loss of citizenship. (PI: 1.3.2, CO2)</i>	- Outline methods of acquiring Indian citizenship. - Explain circumstances under which citizenship is lost. - Differentiate between constitutional and statutory provisions. - Apply rules to hypothetical citizenship scenarios.	ISA
LO 2.2 <i>Relate duties to everyday civic behaviour. (PI: 1.4.2, CO2)</i>	List the fundamental duties in the Constitution.	ISA

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

	• Connect duties to real-life civic activities (e.g., voting, cleanliness). • Evaluate consequences of ignoring civic duties. • Suggest ways to promote civic sense among citizens..	
LO3.1 <i>Analyze the limitations and significance of each fundamental right. (PI: 2.1.4, CO3)</i>	• Explain scope and limits of each right (e.g., Article 19). • Compare rights with international human rights. • Interpret case law related to right restrictions. • Evaluate situations where rights clash with national interest.	ISA
LO3.2 <i>Evaluate constitutional debates like UCC and reservations. (PI: 3.2.1, CO3)</i>	• Summarize key arguments for/against UCC. • Analyze the evolution of reservation policy. • Discuss legal challenges to reservation or UCC. • Debate on future trajectories using recent case law or reports.	ISA
LO 4.1 <i>Identify key social and economic DPSPs and their impact. (PI: 3.3.1, CO3)</i>	• List important DPSPs (Articles 36–51). • Match articles with real-world policies (e.g., MGNREGA). • Identify differences between enforceable rights and guidelines. • Assess how DPSPs shape legislative priorities.	ISA
LO4.2 <i>Compare DPSPs with Fundamental Rights. (PI: 3.2.1, CO3)</i>	• Create a comparison table of DPSPs vs Fundamental Rights. • Discuss conflicts in implementation (e.g., Keshavananda Bharati case). • Explain prioritization in court verdicts. • Analyze implications of non-enforceability.	ISA
LO 5.1 <i>Describe how laws are introduced and passed. (PI: 1.3.2, CO4)</i>	• List stages in the legislative process. • Identify roles of both Houses during lawmaking. • Trace the journey of a recent bill. • Compare legislative procedures in different countries.	ISA
LO5.2 <i>Explain the amendment process and bicameral structure. (PI: 1.4.2, CO4)</i>	• Distinguish between types of amendments (simple, special). • Identify Articles involved in amendment process (e.g., Art. 368). • Diagram the structure of Lok Sabha and Rajya Sabha. • Analyze a major constitutional amendment (e.g., 42nd or 44th).	ISA ISA

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

LO 6.1 <i>Describe functions of Supreme and High Courts. (PI: 1.3.1, CO5)</i>	- List jurisdiction types: original, appellate, advisory. - Compare SC and HC functions. - Identify constitutional articles relevant to judiciary (e.g., Art. 124). - Give examples of landmark judgments.	ISA
LO 6.2 <i>Explain the scope of judicial independence. (PI: 1.4.2, CO5)</i>	- Define "judicial independence." - Discuss appointment and removal of judges. - Examine NJAC and collegium debate. - Explain separation of powers using real cases. .	ISA
LO7.1 <i>Explain the powers and functions of the Election Commission. (PI: 2.1.2, CO6)</i>	- List constitutional provisions (e.g., Art. 324). - Identify roles during pre, mid, and post-election. - Evaluate EC's role in ensuring free and fair elections. - Refer to cases where EC's role was questioned. .	ISA
LO 7.2 <i>Describe the legislative role in elections. (PI: 1.4.2, CO6)</i>	- Explain laws governing elections (RPA 1951). - Identify Parliament's role in electoral reforms. - Discuss model code of conduct and its implementation. - Compare role of legislature vs Election Commission.	ISA
LO8.1 <i>Analyze the legal and social implications of landmark cases. (PI: 3.2.3, CO7)</i>	. - Summarize major rulings (e.g., Kesavananda Bharati, S.R. Bommai). - Analyze how each case shaped constitutional interpretation. - Discuss long-term social effects. - Connect with public or media response.	ISA ISA
LO 8.2 <i>Justify the evolving nature of constitutional interpretation. (PI: 3.3.2, CO7)</i>	- Explain doctrines like basic structure, harmonious construction. - Discuss the role of judicial activism. - Analyze how SC has reinterpreted the Constitution over decades. - Use case law to support dynamic interpretation..	ISA

Preamble:

This course offers a vibrant journey into the rich and diverse artistic traditions of India. Through an exploration of classical and folk forms across music, dance, visual arts, and crafts, students will gain an appreciation of India's cultural heritage and the ways in which art reflects social, historical, and spiritual contexts. Emphasizing experiential learning, the course encourages creative engagement and critical understanding of India's artistic expressions.

Course Objectives:

- To develop the intellectual skills and competencies necessary to participate effectively in society and the world
- To develop broad knowledge of living and non-living world
- To develop ability to appreciate and acknowledge creativity.

Course Outcomes:

Learner will be able to:

Course Outcome	Course Outcome Statement	Bloom's Level
CO1	Understand how they can contribute towards each type of art.	Understand
CO2	Work towards developing holistic personality through critical and creative thinking.	Apply
CO3	Complement technical knowledge by developing diversified perspectives on various aspects of learning.	Understand

Detailed Syllabus:

Module No.	Module Name	Content	No of Hours
1	Introduction to Indian Art	Learning Objective: To understand the diversity, forms, and geographical scope of Indian art in both traditional and modern contexts. (CO1) Contents: Indian art consists of a variety of art forms, including painting, sculpture, pottery, and textile arts such as woven silk. Geographically, it spans the entire Indian Subcontinent, including what is now India, Pakistan, Bangladesh, Sri Lanka, Nepal, and at times Eastern Afghanistan. A strong sense of design is characteristic of Indian Art and can be observed in its modern and traditional forms. Discussing different types and forms in Indian Art, like Drawing, Painting, Handicraft performing art, and the performing arts. Learning Outcomes: A learner will be able to: 1.1 Learners will be able to describe the cultural, religious, and socio-political contexts that shaped various art traditions in India. (CO1) (P.I. 10.1.1, 10.1.2, 12.1.2, 12.3.1) 1.2 Learners will be able to differentiate between classical, folk, tribal, and modern Indian art forms. (CO1) (P.I. 10.1.1, 10.1.2, 12.1.2, 12.3.1) 1.3 Learners will be able to analyze visual and performing arts using appropriate terminology and critical frameworks. (CO1) (P.I. 10.1.3, 10.3.1, 12.3.2, 12.1.2) 1.4 Learners will be able to appreciate the diversity and symbolism in Indian sculpture, painting, architecture, music, dance, and crafts. (CO1) (P.I. 10.2.1, 10.2.2, 12.3.2) 1.5 Learners will be able to trace the regional variations and continuity of artistic practices across India. (CO1) (P.I. 10.1.1, 10.1.3, 12.2.1, 12.3.1)	2
2	Indian Architecture	Learning Objective: To identify and analyze the distinctive features, historical development, and cultural significance of major architectural styles in India—from ancient to contemporary periods—while understanding their influence on society, religion, and regional identity. (CO2) Contents: Photos and Videos of Indian structure will be shown. Students will share their views on the same. The session starts with students will get one topic, which they must discuss with their teammates and present in front of the class. Assignments will be on architectural sites. They will choose their own topic and will present in limited time span.	7

		Learning Outcomes: A learner will be able to: 2.1 The Learners will be able to identify key architectural styles and monuments across different periods of Indian history (e.g., Buddhist, Hindu, Jain, Islamic, Colonial, and Modern). (CO 2) (P.I. 10.1.1, 10.1.2, 12.3.1) 2.2 The Learners will be able to describe the historical, religious, and cultural contexts that shaped the evolution of Indian architecture. (CO2) (P.I. 10.1.1, 10.1.2, 12.1.2, 12.3.1) 2.3 The Learners will be able to differentiate between regional architectural features and materials used across various parts of India. (CO2) (P.I. 10.1.1, 10.1.2, 12.3.1) 2.4 The Learners will be able to analyze the structural elements, aesthetics, and symbolism in prominent Indian architectural works. (CO2) (P.I. 10.1.3, 10.3.1, 12.3.2, 12.1.2) 2.5 The Learners will be able to trace the development of temple, stupa, mosque, palace, and fort architecture in India. (CO2) (P.I. 10.1.1, 10.1.3, 12.2.1, 12.3.1)	
3	Indian music and Performing Arts	Learning Objective: To enable students to understand and appreciate the fundamental concepts, historical evolution, and cultural significance of Indian music and performing arts, while developing the ability to critically engage with various classical, folk, and contemporary forms. (CO1) Contents: What is Performing Arts? 4 major streams of dance music, theatre and film. Languages, Rulers and Kings as depicted in the paintings. Students will share their native experiences and will perform for their class. Learning Outcomes: A learner will be able to: 3.1 The Learners will be able to identify the major forms of Indian music (classical, folk, devotional) and performing arts (dance, theatre, puppetry). (CO1) (P.I. 10.1.1, 10.1.2) 3.2 The Learners will be able to understand the theoretical foundations of Indian classical music and dance, including ragas, talas, and natya shastra principles. (CO1) (P.I. 10.1.1, 10.1.2, 12.1.2) 3.3 The Learners will be able to differentiate between Hindustani and Carnatic music traditions and their regional and stylistic variations. (CO1) (P.I. 10.1.1, 10.1.2) 3.4 The Learners will be able to describe the key elements, techniques, and expressions used in major Indian classical dance forms (e.g., Bharatanatyam, Kathak, Odissi, Kathakali). (CO1) (P.I. 10.1.3, 10.2.2, 12.3.2) 3.5 The Learners will be able to trace the historical development and cultural significance of Indian performing arts across periods. (CO1) (P.I. 10.1.1, 10.1.3, 12.2.1)	7

4	Painting Styles and Handicrafts	Learning Objective: To develop an understanding of the Directive Principles as guiding values for governance, and to critically assess their role in shaping social and economic policies aimed at achieving a just and equitable society. (CO3) Contents: Warli Painting is a Tribal Art mostly created by the tribal people from the North Sahyadri Range in Maharashtra, India. This range encompasses cities such as Dahanu, Talasari, Jawahar, Palghar, Mokhada, and Vikramgad of Palghar district. This tribal art originated in Maharashtra, where it is still practiced today. Learning Outcomes: A learner will be able to: 4.1 The Learners will be able to identify major traditional and regional painting styles of India, such as Madhubani, Warli, Pattachitra, Kalamkari, Tanjore, and Miniature painting. (CO3) (P.I. 10.1.1, 10.1.2, 12.3.1) 4.2 The Learners will be able to recognize key Indian handicraft traditions, including textiles, pottery, woodwork, metalwork, and jewelry-making. (CO3) (P.I. 10.1.1, 10.1.2, 12.3.1) 4.3 The Learners will be able to Describe the historical and cultural context in which various painting styles and handicrafts developed. (CO3) (P.I. 10.1.1, 10.1.2, 12.1.2, 12.3.1) 4.4 The Learners will be able to Differentiate between folk, tribal, and classical painting forms and their thematic and stylistic features. (CO3) (P.I. 10.1.1, 10.1.2, 12.3.1) 4.5 The Learners will be able to Analyze the materials, techniques, and symbolism used in traditional Indian art and craft practices. (CO3) (P.I. 10.1.3, 10.3.1, 12.3.2, 12.1.2)	7
5	Madhubani Painting	Learning Objective: To enable students to understand the origin, techniques, themes, and cultural significance of Madhubani painting, and to develop basic skills in creating artworks using its traditional motifs and styles. (CO2) Contents: Madhubani Painting is a style of painting practiced in the Mithila region of India and Nepal. It is named after the Madhubani district of Bihar, India (the place of its origin). Artists create this painting by using a variety of mediums, including their own fingers, twigs, brushes, nib-pens, and matchsticks. The paint is created using natural dyes and pigments. The paintings are characterized by their eye-catching geometrical patterns. There is a ritual content for particular occasions, such as birth or marriage, and festivals such as Holi, Surya Shasti, Kali Puja, Upanayana, and Durga Puja. Learning Outcomes:	5

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		<i>A learner will be able to:</i> 5.1 The Learners will be able to understand the historical and cultural origins of Madhubani painting and its connection to the Mithila region of Bihar. (CO2) (P.I. 10.1.1, 10.1.2, 12.1.2, 12.3.1) 5.2 The Learners will be able to identify key themes and symbols traditionally used in Madhubani art, such as mythology, nature, and rituals. (CO2) (P.I. 10.1.1, 10.1.2, 12.3.1) 5.3 The Learners will be able to recognize different styles within Madhubani painting (e.g., Bharni, Kachni, Tantrik, Godna, and Kohbar). (CO2) (P.I. 10.1.1, 10.1.2, 12.3.1) 5.4 The Learners will be able to describe the traditional tools and materials used, including natural dyes, handmade paper, and bamboo pens.(CO2) (P.I. 10.1.1, 10.1.2, 12.3.1) 5.5 The Learners will be able to demonstrate basic techniques of line drawing, border making, and motif repetition typical of Madhubani. (CO2) (P.I. 10.3.1, 10.3.2, 12.3.2)	
Total			30

Suggested List of Practical:

Sr No.	Suggested Topic(s)
1.	Various Quizzes (as mentioned in the syllabus copy) Learning Outcomes: <i>A learner will be able to:</i> 1.5Learners will be able to trace the regional variations and continuity of artistic practices across India. (CO1) (P.I. 10.1.1, 10.1.3, 12.2.1, 12.3.1) 2.5The Learners will be able to trace the development of temple, stupa, mosque, palace, and fort architecture in India. (CO2) (P.I. 10.1.1, 10.1.3, 12.2.1, 12.3.1) 3.5The Learners will be able to trace the historical development and cultural significance of Indian performing arts across periods. (CO1) (P.I. 10.1.1, 10.1.3, 12.2.1, 12.3.1) 4.5The Learners will be able to analyze the materials, techniques, and symbolism used in traditional Indian art and craft practices. (CO3) (P.I. 10.1.3, 10.3.1, 12.3.2, 12.1.2) 5.5The Learners will be able to demonstrate basic techniques of line drawing, border making, and motif repetition typical of Madhubani. (CO2) (P.I. 10.3.1, 10.3.2, 12.3.2)

Performance Indicators:

P.I. 10.1.1 Understanding: Read, understand and interpret technical and non-technical information

P.I. 10.1.2 Create: Produce clear, well-constructed, and well-supported written engineering

P.I. 10.1.3 Create/Analyze: Create flow in a document or presentation - a logical progression of ideas so that the main point is clear

P.I. 10.2.1 Understand: Listen to and comprehend information, instructions, and viewpoints of others

P.I. 10.2.2 Apply/Create: Deliver effective oral presentations to technical and non-technical audiences

P.I. 10.3.1 Create: Create engineering-standard figures, reports and drawings to complement writing and presentations

P.I. 10.3.2 Apply/Create: Use a variety of media effectively to convey a message in a document or a presentation

P.I. 12.1.1 Understand: Describe the rationale for the requirement for continuing professional development

P.I. 12.1.2 Analyse: Identify deficiencies or gaps in knowledge and demonstrate an ability to source information to close this gap

P.I. 12.2.1 Remember: Identify historic points of technological advance in engineering that required practitioners to seek education in order to stay current

P.I. 12.2.2 Understand: Recognize the need and be able to clearly explain why it is vitally important to keep current regarding new developments in your field

P.I. 12.3.1 Understand: Source and comprehend technical literature and other credible sources of information

P.I. 12.3.2 Analyze: Analyze sourced technical and popular information for feasibility, viability, sustainability, etc.

Detailed Syllabus of Liberal Learning-Co-curricular Courses

Course Name: Various Dance Forms

Course Code: CC01

Vertical/ Sub-Vertical: LLC_CC

K-S-A Mapping: Knowledge, Skill & Attitude

Pre-requisite required: NIL

Pre-requisite for: NIL

Recommended Semester: 1 & 2

Preamble:

Wide platter of General Education courses are offered to First Year Engineering students with an aim to focus on holistic personality development. These courses will also help to create balance in brain hemispheres and thereby improve learners' clarity in thoughts and responses.

Course Objectives:

- To develop the intellectual skills and competencies necessary to participate effectively in society and the world
- To develop broad knowledge of living and non-living world
- To develop ability to integrate knowledge, make informed ethical decisions and accept civic responsibilities

Course Outcomes:

Learner will be able to:

CO1: Differentiate between various dance forms

CO2: Work towards developing holistic personality through critical and creative thinking

CO3: Complement technical knowledge by developing diversified perspectives on various aspects of learning.

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
CC01	2	-	2	-
	-		-	

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (CC01)	25 (33.33%)	-	50 (66.66%)	075 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Various Dance Forms	Dance, Definition, History, music, rhythm. Basic understanding of the term ABHINAYA and definition of its four aspects. Technical terminology of dance. Acquaintance with the traditional costumes.	15
		Dance forms: Indian Classical dance, folk dance, Bollywood, Jazz and performances	15

Course Name: Corporate and Social Etiquettes

Course Code: CC02

Vertical/ Sub-Vertical: LLC_CC

K-S-A Mapping: Knowledge, Skill & Attitude

Pre-requisite required: NIL

Pre-requisite for: NIL

Recommended Semester: 1 & 2

Preamble:

In today's dynamic and multicultural workplace, technical expertise alone is not enough. Success in the professional world hinges on one's ability to communicate effectively, behave appropriately, and uphold ethical standards. The Corporate and Social Etiquettes course equips individuals with essential soft skills that foster professionalism, enhance personal branding, and build confidence in both corporate and social settings. This course bridges the gap between academic knowledge and real-world workplace behavior, preparing participants to thrive in diverse professional environments with poise, clarity, and integrity.

Course Objectives:

- To develop essential corporate communication and interpersonal etiquette for professional settings.
- To build competence in public speaking, business interactions, and ethical decision-making.
- To enhance learners' ability to apply professionalism in diverse workplace and social scenarios.

Course Outcomes:

Learners will be able to:

CO1: Demonstrate willingness to adopt professional etiquette in communication, dress, and interpersonal conduct. (Receiving → Responding)

CO2: Participate actively in professional interactions, showing respect for workplace diversity and social norms. (Responding → Valuing)

CO3: Value ethical behavior and integrity as essential components of professional identity and decision-making. (Valuing)

CO4: Integrate appropriate etiquette into routine professional practices, including interviews, meetings, and networking. (Organizing)

CO5: Exemplify professionalism and responsible conduct consistently across diverse business and social situations. (Characterizing)

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical

Detailed Syllabus:

Module No.	Module Name	Content	No. of Hours
1	Foundations of Corporate Etiquette & Professional Image	- Importance of corporate etiquette in modern workplaces - First impressions and body language - Dressing for success: grooming and attire - Professional conduct: punctuality, workspace manners - Cross-cultural and global etiquette basics	5
2	Business Communication & Digital Etiquette	- Verbal and non-verbal communication - Active listening and empathetic speaking - Email writing and etiquette - Telephone, messaging, and video conferencing protocols - Social media and digital footprint management	5
3	Public Speaking & Presentation Skills	- Overcoming stage fright - Structure of effective speeches and presentations - Visual aids and storytelling techniques - Q&A handling and engagement strategies - Persuasive speaking for business settings	5
4	Business Meetings, Networking & Social Etiquette	- Preparing for and participating in meetings - Formal introductions and small talk - Networking at events, conferences, and dinners - Exchanging business cards appropriately - Business dining and RSVP etiquette	5
5	Interview Skills & Professional Advancement	- Resume walkthroughs and professional storytelling - STAR method for answering questions - Mock interviews: HR and panel types - Follow-up etiquette (emails, thank-yous)	5

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

		• Career etiquette: internships, promotions, resignations	
6	Corporate Ethics, Integrity & Capstone Project	• Defining corporate ethics and code of conduct • Conflict of interest and workplace compliance • Handling ethical dilemmas and reporting concerns • Diversity, equity, and inclusion in behavior • Course wrap-up, capstone presentations, and reflection	5

Course Code: CC03

Vertical/ Sub-Vertical: LLC_CC

K-S-A Mapping: Knowledge, Skill & Attitude

Pre-requisite required: NIL

Pre-requisite for: NIL

Recommended Semester: 1 & 2

Preamble:

Global Citizenship Education (GCE) equips students with the understanding, skills, and values they need to cooperate in resolving interconnected global challenges and to become responsible citizens of the world. This course introduces learners to the concepts of identity, diversity, sustainability, and human rights, while enhancing cross-cultural competence and promoting social responsibility in engineering practice.

Course Objectives:

- To understand core concepts related to identity, culture, sustainability, and global interdependence.
- To nurture empathy, critical thinking, and collaborative problem-solving.
- To empower students to take informed, reflective action in both local and global contexts.

Course Outcomes:

Learners will be able to:

CO1: Describe key global issues and cultural differences and appreciate the diversity of perspectives.

CO2: Analyze how engineering solutions can promote sustainable development and equity.

CO3: Demonstrate intercultural competence, ethical reasoning, and civic responsibility in personal and professional settings.

Pre-requisite required: NIL

Pre-requisite for: NIL

Recommended Semester: 1 & 2

Preamble:

Financial literacy is a crucial skill for engineers to understand and manage their personal finances efficiently and make informed decisions in their professional roles. This course aims to equip engineering students with the knowledge and skills necessary to navigate financial matters effectively.

Prerequisite: NIL

Course Objective:

1. Introduce students to fundamental financial concepts, including budgeting, saving, and investing, tailored for engineering professionals.
2. Equip students with tools to analyze costs, returns, and economic feasibility in engineering projects.
3. Teach students effective strategies for managing personal finances, including debt management and tax planning.
4. Familiarize students with investment options, portfolio diversification, and strategies for long-term wealth generation.
5. Train students to make informed financial decisions by analyzing risks, benefits, and ethical considerations.
6. Prepare students to incorporate financial insights into project planning, resource allocation, and entrepreneurial ventures.

Course Outcomes: Learner will be able to:

CO1: Understand and apply basic financial concepts in both personal and professional contexts.

CO2: Evaluate the economic viability of engineering projects using cost-benefit and break-even analyses.

CO3: Create budgets, manage debts, and plan for taxes efficiently.

CO4: Assess various investment vehicles and design diversified portfolios to achieve financial goals.

CO5: Integrate financial considerations into engineering decision-making processes.

CO6: Solve real-world financial problems using analytical tools and ethical practices.

K-S-A Mapping: Knowledge, Skill & Attitude

Pre-requisite required: NIL

Pre-requisite for: NIL

Recommended Semester: 1 & 2

Preamble:

Microsoft Excel has become a vital tool for data analysis, financial modelling, and decision-making across industries. This course is designed to equip learners with advanced Excel skills, enabling them to solve complex problems, streamline workflows, and create impactful visualizations. It emphasizes hands-on learning through real-world applications, fostering confidence and expertise in advanced spreadsheet techniques.

Prerequisite:

Basic knowledge of Excel, including familiarity with basic formulas, formatting, and chart creation.

Course Objective:

1. Enable students to effectively use advanced Excel functions and formulas, including logical, statistical, and lookup functions, for complex data manipulation and problem-solving.
2. Teach students to organize, filter, and analyze large datasets using tools like PivotTables, Power Query, and advanced sorting techniques.
3. Equip students with the ability to create dynamic and visually impactful charts, dashboards, and reports for data-driven decision-making.
4. Introduce students to Excel automation using Macros and VBA (Visual Basic for Applications) to improve productivity and efficiency.
5. Familiarize students with tools such as Solver, Data Tables, Scenario Manager, and advanced conditional formatting to solve real-world business problems.
6. Provide practical exposure by solving real-world business challenges and projects using advanced Excel features, fostering hands-on learning and application.

Course Outcomes: Learner will be able to:

CO1: Apply advanced formulas and functions for complex data manipulation.

CO2: Perform data analysis using tools like PivotTables, Power Query, and Power Pivot.

CO3: Automate repetitive tasks using macros and Visual Basic for Applications (VBA).

CO4: Create interactive dashboards and dynamic visualizations.

CO5: Use advanced tools to solve real-world business problems.

CO6: Optimize Excel workflows and enhance productivity.

Course Name: Personal Grooming Essentials

Course Code: CC11

Vertical/ Sub-Vertical: LLC_CC

K-S-A Mapping: Knowledge, Skill & Attitude

Pre-requisite required: NIL

Pre-requisite for: NIL

Recommended Semester: 1 & 2

Preamble:

The Personal Grooming Essentials course aims to equip students with foundational skills and knowledge to enhance their personal appearance, confidence, and social etiquette. Through a blend of theoretical concepts and practical demonstrations, students will learn the importance of personal grooming in professional and social settings. The course aligns with the National Board of Accreditation (NBA) standards as per All India Council for Technical Education (AICTE) norms, focusing on holistic development and industry relevance.

Course Objective:

1. Introduce the importance of personal grooming and its impact on self-confidence and professional image.
2. Teach effective personal hygiene practices and skincare routines tailored to different skin types and needs.
3. Provide basic knowledge and techniques for maintaining hair and applying makeup for various occasions.
4. Educate students on choosing appropriate attire for professional, casual, and formal settings.
5. Train students to project confidence through effective verbal and non-verbal communication.
6. Equip students with strategies to manage their daily grooming routine efficiently without compromising quality.

Course Outcomes: Learner will be able to:

CO1: Apply consistent grooming habits to maintain a polished and presentable appearance.

CO2: Design skincare routines suited to their individual skin types and concerns.

CO3: Demonstrate basic hairstyling and makeup application techniques for professional and social occasions.

CO4: Select clothing and accessories that align with professional, casual, and formal etiquette.

CO5: Display poise and professionalism using refined communication and body language skills.

CO6: Integrate grooming into their daily schedule effectively, balancing personal and professional commitments.

Course Scheme:

Course Code	Contact Hours		Credits Assigned	
	Theory	Practical	Theory	Practical
CC11	2	-	2	-
	-		-	

Assessment guidelines:

Head of Learning	ISA	MSE	ESE	Total
Theory (CC11)	25 (33.33%)	-	50 (66.66%)	075 (100%)

The assessment guidelines for the courses of different credits are mentioned above. Notwithstanding the above, each course faculty shall have the choice to propose her/his assessment methodology based on the nature of the course. However, the proposed assessment methodology shall be approved by a panel constituted at Institute level and published to the learners before the commencement of the semester.

Detailed Syllabus:

Module No.	Module Name	Content	No of hrs
1	Foundations of Personal Grooming	- Importance of grooming for personal and professional growth - Assessing individual grooming needs and goals, Grooming and first impressions: psychological and social impacts.	5
2	Hygiene and Skincare Essentials	- Fundamentals of personal hygiene: habits and tools - Skin types and common concerns (e.g., acne, dryness, sensitivity) - Daily skincare routines: cleansing, moisturizing, and protection - Seasonal skincare adjustments and home remedies.	5
3	Hair Care and Makeup Basics	- Hair care routines: washing, conditioning, and styling tips - Identifying hair types and selecting suitable products - Basic makeup application: foundation, eyeliner, and lipstick, Day vs. evening makeup: subtle and bold looks.	5
4	Dressing and Styling Etiquette	- Understanding dress codes: formal, semi-formal, business casual, and casual - Choosing clothing based on body type and occasion - Accessorizing effectively: jewelry, watches, and belts, Color coordination and fabric selection.	5
5	Communication and Body Language	- Basics of verbal communication: tone, clarity, and courtesy - Non-verbal communication: eye contact, posture, and gestures - Building confidence through body language and self-awareness, Handling criticism and feedback gracefully.	5
6	Grooming Time Management and Application	- Creating a time-efficient grooming schedule, Adapting grooming routines for travel and emergencies - Real-life practice: grooming for interviews, meetings, and events, Final project:	5

Course Name: Various Music Forms

Course Code: CC12

Vertical/ Sub-Vertical: LLC_CC

K-S-A Mapping: Knowledge, Skill & Attitude

Pre-requisite required: NIL

Pre-requisite for: NIL

Recommended Semester: 1 & 2

Preamble:

Music, often referred to as the universal language of humanity, is an art form that transcends boundaries of culture, geography, and time. The study of Various Music Forms provides learners with a deep appreciation of the diverse styles and traditions that have shaped human expression. From classical compositions and folk traditions to contemporary genres, music forms are reflection of societal evolution, emotional depth, and artistic creativity. This course offers a structured exploration of music as a cultural phenomenon, an emotional outlet, and a technical discipline. Students will engage with theoretical underpinnings, historical contexts, and practical demonstrations of distinct music forms, fostering a holistic understanding of:

- Classical Music: The disciplined and structured traditions of Western and Eastern classical genres.
- Folk Music: The rich and diverse expressions of communities and their oral traditions.
- Contemporary Genres: The dynamic and evolving sounds of modern music, including pop, rock, jazz, and electronic styles.
- Global Perspectives: The cross-cultural influences and fusion trends that redefine music in the globalized world.

By connecting theory with practice, the course aims to nurture a well-rounded appreciation for the role of music in individual lives and societal frameworks. Additionally, it encourages creativity and interdisciplinary thinking, equipping students with the skills to analyze, perform, and innovate across music forms. Whether approached as a performer, composer, listener, or critic, the study of Various Music Forms is a journey through the heart of human expression and artistic legacy.

Prerequisite: NIL

Course Objective:

1. Explore the historical and cultural development of various music forms across the globe.
2. Familiarize students with the key features, instruments, and structures of various music genres.
3. Enhance students' understanding of diverse musical traditions and their cultural significance.
4. Train students to identify and interpret rhythm, melody, harmony, and texture in different music forms.
5. Inspire students to explore their musical preferences and express themselves creatively.
6. Provide students with opportunities to perform, compose, and appreciate music in different styles.

Course Outcomes:

By the end of this course, students will: Course Outcomes: Learner will be able to:

CO1: Demonstrate an understanding of fundamental music forms, including their origins, evolution, and the key characteristics that define classical, folk, popular, sacred, and contemporary music traditions.

CO2: Analyze the structures, styles, and cultural significance of classical music traditions, including their influence on modern musical compositions and performances.

CO3: Explore and interpret the cultural roots, storytelling elements, and regional diversity of folk and traditional music forms across various societies.

CO4: Examine the development of popular music genres, identifying their socio-cultural impact, influential artists, and technological advancements that shaped their evolution.

CO5: Investigate the role of sacred and spiritual music in different traditions, recognizing its significance in rituals, worship, and community bonding.

CO6: Evaluate the influence of globalization on contemporary music, exploring how cross-cultural exchanges shape modern music forms and trends worldwide.

Course Name: MOJO: Model of Joy

Course Code: CC13

Vertical/Sub-Vertical: Liberal Learning Course

K-S-A Mapping: Attitude

Pre-requisite required: Nil

Pre-requisite for: Nil

Recommended Semester: Semester I/II

Preamble:

Engineering education often focuses on technical competence, while personal well-being and happiness receive limited attention. The MOJO (Model of Joy) course is designed to help students understand the factors that contribute to a fulfilling and balanced life. Through the study of happiness, sports, hobbies, nutrition, mindfulness, and emotional well-being, students will develop practical strategies to enhance their quality of life. The course adopts a holistic approach and uses the Happiness Index as a tool for self-assessment and continuous improvement.

Course Objectives:

- To introduce students to the concept of MOJO and the Happiness Index.
- To cultivate mindfulness for improved focus, self-awareness, and stress management.
- To strengthen emotional well-being, resilience, and interpersonal effectiveness.
- To develop awareness about nutrition and healthy lifestyle practices.
- To promote physical well-being through sports and recreational activities.
- To encourage participation in hobbies for creativity, relaxation, and personal growth.

Course Outcomes:

Learner will be able to:

Course Outcomes	Course Outcome Statement	Bloom's Level
CO1	Explain the concept of happiness and evaluate personal well-being using the Happiness Index.	Understand
CO2	Practice mindfulness techniques to enhance focus and manage stress effectively.	Apply
CO3	Develop strategies for emotional well-being, resilience, and positive relationships.	Apply
CO4	Demonstrate healthy nutritional practices for improved physical and mental performance.	Apply

First Year Scheme & Syllabus (R-2026) Bachelor of Technology (B.Tech.)
Electronics and Computer Science

CO5	Illustrate the role of sports and games in promoting physical and mental well-being.	Apply
CO6	Apply hobbies and creative activities as tools for personal growth and life balance.	Apply
